# INTRODUCTION

This issue of *Energy - A Continuing Bibliography with Indexes* (NASA SP-7043(10)) lists 426 reports, journal articles, and other documents announced between April 1, 1976 and June 30, 1976 in *Scientific and Technical Aerospace Reports* (STAR) or in *International Aerospace Abstracts* (IAA). The first issue of this continuing bibliography was published in May 1974 and succeeding issues are published quarterly.

The coverage includes regional, national and international energy systems; research and development on fuels and other sources of energy; energy conversion, transport, transmission, distribution and storage, with special emphasis on use of hydrogen and of solar energy. Also included are methods of locating or using new energy resources. Of special interest is energy for heating, lighting, for powering aircraft, surface vehicles, or other machinery.

Each entry in the bibliography consists of a standard bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged in two major sections, *IAA Entries* and *STAR Entries* in that order. The citation, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR* including the original accession numbers from the respective announcement journals. This procedure, which saves time and money accounts for the slight variation in citation appearances.

Five indexes—subject, personal author, corporate source, contract number, and report number—are included. The indexes are of the cumulating type throughout the year, with the fourth quarterly publication containing abstracts for the fourth quarter and index references for the four quarterly publications.

# AVAILABILITY OF CITED PUBLICATIONS

## IAA ENTRIES (A76-10000 Series)

All publications abstracted in this Section are available from the Technical Information Service, American Institute of Aeronautics and Astronautics, Inc (AIAA), as follows. Paper copies are available at \$5.00 per document up to a maximum of 20 pages. The charge for each additional page is 25 cents. Microfiche<sup>(1)</sup> are available at the rate of \$1.50 per microfiche for documents identified by the # symbol following the accession number. A number of publications, because of their special characteristics, are available only for reference in the AIAA Technical Information Service Library. Minimum airmail postage to foreign countries is \$1.00. Please refer to the accession number, e.g., (A76-10147), when requesting publications.

## STAR ENTRIES (N76-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

**Avail NTIS** Sold by the National Technical Information Service to U.S. customers at the price shown in the citation following the letters HC (hard, paper, or facsimile copy). Customers outside the U.S. should add \$2.50 per copy for handling and postage charges to the price shown. (Prices shown in earlier *STAR* volumes, 1962-1975, have been superseded but may be calculated from the number of pages shown in the citation. The price schedule by page count was published in *STAR* Numbers 2 and 3 of 1976, or it may be obtained from NTIS.)

Microfiche<sup>(1)</sup> is available at a standard price of \$2.25 (plus \$1.50 for non-U.S. customers) regardless of source or the quality of the fiche, for those accessions followed by a # symbol. Accession numbers followed by a + sign are not available as microfiche because of size or reproducibility.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Unit.

**NOTE ON ORDERING DOCUMENTS** When ordering NASA publications (those followed by the \* symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other report number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

**Avail SOD (or GPO)** Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard \$2.25 price, for those documents identified by a # symbol.)

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size, containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction).

- Avail NASA Public Document Rooms** Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Documents Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory
- Avail ERDA Depository Libraries** Organizations in U.S. cities and abroad that maintain collections of Energy Research and Development Administration reports, usually in microfiche form, are listed in *Nuclear Science Abstracts*. Services available from the ERDA and its depositories are described in a booklet, *Science Information Available from the Energy Research and Development Administration* (TID-4550), which may be obtained without charge from the ERDA Technical Information Center
- Avail Univ. Microfilms** Documents so indicated are dissertations selected from *Dissertation Abstracts* and sold by University Microfilms as xerographic copy (HC). All requests should cite the author and the Order Number as they appear in the citation
- Avail USGS** Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this Introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction
- Avail HMSO** Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI
- Avail BLL (formerly NLL)** British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown (if none is given, inquiry should be addressed to the BLL)
- Avail ZDI** Sold by the Zentralstelle für Luftfahrt-dokumentation und -Information, Munich, Federal Republic of Germany, at the price shown in deutschmarks (DM)
- Avail Issuing Activity, or Corporate Author, or no indication of availability** Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document
- Avail U.S. Patent Office** Sold by Commissioner of Patents, U.S. Patent Office, at the standard price of 50 cents each, postage free
- Other availabilities** If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line

## **GENERAL AVAILABILITY**

All publications abstracted in this bibliography are available to the public through the sources as indicated in the *STAR Entries* and *IAA Entries* sections. It is suggested that the bibliography user contact his own library or other local libraries prior to ordering any publication inasmuch as many of the documents have been widely distributed by the issuing agencies, especially NASA. A listing of public collections of NASA documents is included on the inside back cover.

## **SUBSCRIPTION AVAILABILITY**

This publication is available on subscription from the National Technical Information Service (NTIS). The annual subscription rate for the quarterly supplement is \$15.00. All questions relating to subscriptions should be referred to the NTIS.

12. Heat pipe technology A bibliography with abstracts N76-21423 p0089

JULY 1976

### IAA ENTRIES

**A76-19022 \*** A study of efficiency in low resistivity silicon solar cells P M Dunbar and J R Hauser (North Carolina State University, Raleigh, NC) *Solid-State Electronics*, vol 19, Feb 1976, p 95-102 22 refs NASA-supported research

A general device-analysis program has been utilized to study the efficiency of silicon solar cells. The analysis is applied to specific geometries of both n(+) p and n(+) p-p(+) solar cells, and involves a numerical solution of the basic transport and continuity equations. This approach allows solutions that are free of typical limiting assumptions involved in solving the device equations as well as solutions relating to lifetime, mobility variations, and diffused-region profiles. The analysis includes available empirical information on diffusion length, mobility, and lifetime as a function of doping, as well as a Gaussian profile for the diffused region. Results are presented which illustrate the limitations of efficiency as a function of doping. It is found that the maximum efficiencies for both types of cell converge at lower resistivities to around 16% with air-mass-zero radiation and a single-layer absorbing-SiO<sub>2</sub> antireflecting film. It is also found that the minority-carrier lifetime, both in the n(+) surface and p-type bulk regions, presents serious limitations to conversion efficiency, particularly in the low-resistivity cells.

(Author)

**A76-19092 #** Future energy demand and the role of solar energy T Thalhammer (Philips Gloeilampenfabrieken, Philips Research Laboratories, Eindhoven, Netherlands) *Acta Electronica*, vol 18, Oct 1975, p 267-273 22 refs

It is estimated that by 1985 thermal solar installations must be cost competitive with 0.75 cents/kWh for primary fuel energy. Assuming an efficiency of 35% and a discounted cash flow of 15%, the estimated allowable cost for the total solar plant installation is \$24/sq m. A total annual solar energy supply of about 10 trillion kWh (13% of projected OECD requirements) is predicted by the year 2000. In the light of these figures, a survey of methods for the conversion of solar energy into various other forms of energy is presented, and possible means of improving the efficiencies of the methods are considered. Cost expectations and other factors influencing the rate of introduction of solar energy are discussed.

C K D

**A76-19093 #** Solar radiation (Le rayonnement solaire) F Desvignes (Societe Anonyme d'Etudes et Realisations Nucleaires, Limeil Brevannes, Val-de-Marne, France) *Acta Electronica*, vol 18, Oct 1975, p 275-294 16 refs In French

This paper summarizes those solar radiation characteristics which are related to solar energy utilization. A short description of the radiation which reaches the upper atmosphere is given. The geometrical consequences of earth rotation, related to spin axis tilt with respect to the eclipse plane, and ground based collector inclination are examined. After a review of atmospheric optical properties - absorption, scattering - the characteristics of the daylight

radiation which is received at the ground are examined. Statistical information needed for the sizing of solar power installations is described. The paper concludes with the analysis of various problems related to the simulation of solar radiation and the measurement of energy conversion efficiency.

(Author)

**A76-19094 #** Photothermal conversion E Kauer, R Kersten, and F Mahdjuri (Deutsche Philips GmbH, Forschungs laboratorium, Aachen, West Germany) *Acta Electronica*, vol 18, Oct 1975, p 295-304 22 refs

This paper is introduced by a short survey on global power fluxes and the principal processes involved in photothermal conversion. The temperatures which can be produced by this method range from ambient to 4000 K. The main part of the paper deals with low temperatures up to 150 C. The efficiencies of various types of flat plate collectors in relation to their heat losses, transmission, absorption, working temperatures, and weather conditions are analyzed. It is shown how medium (150-600 C) and high temperatures (greater than 600 C) can be obtained by various types of optical focusing systems which increase the radiation density. A short description of some experimental solar power plants is given.

(Author)

**A76-19096 #** Simulation of silicon solar cells and comparison with experimental results (Simulation de cellules solaires au silicium et comparaison avec des resultats experimentaux) J Michel and A Mircea (Laboratoires d'Electronique et de Physique Appliquee, Limeil Brevannes, Val-de-Marne, France) *Acta Electronica*, vol 18, Oct 1975, p 311-330 22 refs In French

A detailed description of the physical mathematical model developed for computer simulation of the operation of photovoltaic cells is given. This program is particularly flexible and implies little working cost. Its use in analyzing the effect of numerous parameters on the conversion output of silicon cells with an n-p and n-p-p structure is described. It is shown that it is possible to achieve better conversion outputs with thin cells (50 to 100 micrometers) than with cells of the usual thickness (300 micrometers).

(Author)

**A76-19097 #** Physical characterization of silicon solar cells by a study of spectral responses (Caracterisation physique des cellules solaires au silicium par l'etude des reponses spectrales) E Fabre and M Mautref (Laboratoires d'Electronique et de Physique Appliquee, Limeil-Brevannes, Val de Marne, France) *Acta Electronica*, vol 18, Oct 1975, p 331-338 18 refs In French

Spectral response measurements are shown to be a useful tool for assessing solar cells. Data is acquired on minority carrier diffusion length and on the entrance window of the cell, i.e., on the main parameters which govern the overall conversion efficiency. Trap saturation phenomena which lead to an improvement of the apparent minority carrier diffusion length are measured. An electrolytic cell is used to study the influence of different parameters which can affect the short-circuit current and to establish the best solar cell fabrication process.

(Author)

**A76-19098 #** Industrial development of silicon solar cells (L'evolution industrielle des cellules solaires au silicium) Y Salles (La Radiotechnique Compelec, Caen, France) *Acta Electronica*, vol 18, Oct 1975, p 339-343 5 refs In French

Silicon solar cells were first developed and manufactured for space applications. Following a cost reduction due to technological progress, the use of the solar cells has greatly increased. This paper describes the evolution of different technological steps in manufacturing solar cells and panels for terrestrial applications. The conversion efficiency of the cells in the BPX 47 A panel is now 12.5 per cent (it was 9 per cent during the last few years). A cost analysis is carried out. (Author)

**A76-19099 #** Materials for solar cells (Les matériaux pour photopiles solaires). M. Rodot (CNRS, Laboratoire de Physique des Solides, Meudon, Hauts de Seine, France). *Acta Electronica*, vol. 18, Oct. 1975, p. 345-358. 45 refs. In French.

Materials problems associated with solar cells are studied. The electronic properties of Si, III-V and II-VI compounds are reviewed, with special attention to the effect of doping on recombination and to point defects. The discussion lays emphasis on three types of cells: silicon cells, CdS-Cu<sub>2</sub>S heterojunction cells and GaAs cells. (Author)

**A76-19162** Epitaxial solar cells on silicon EFG 'ribbon' substrates. H. Kressel, R. V. D'Aiello, and P. H. Robinson (RCA Laboratories, Princeton, N.J.). *Applied Physics Letters*, vol. 28, Feb. 1, 1976, p. 157-159. 7 refs. NSF-supported research.

Epitaxial solar-cell structures grown on polycrystalline silicon 'ribbon' substrates (prepared by the edge-defined-growth process) are compared with devices made by direct diffusion into similar material. Efficiency values of 10% (AM-1) have been achieved by the epitaxial structures, which are substantially higher than achieved by diffusion. The improvement is shown to result mainly from the lower saturation-current density of the epitaxial junctions. (Author)

**A76-19270** Energy. Volume 2 - Non-nuclear energy technologies. S. S. Penner and L. Icerman (California, University, La Jolla, Calif.). Reading, Mass., Addison-Wesley Publishing Co., Inc., 1975. 704 p. 302 refs. \$19.50.

Oil recovery from tar sands and oil shale is considered along with questions related to the availability and the use of coal, the hydrogen economy, energy-storage systems, techniques for direct energy conversion, and aspects of solar-energy utilization. Attention is also given to energy from windmills, tidal and wave energy utilization, hydroelectric power generation, hydrothermal energy sources and their utilization, geothermal energy from dry wells, and questions related to electrical power production, transmission, and distribution. (G. R.)

**A76-19398** What can we expect from geothermal energy (Que pouvons-nous attendre de l'énergie géothermique). J. Goguel (Bureau de Recherches Géologiques et Minières, Paris, France). *Palais de la Découverte, Revue*, vol. 4, Jan. 1976, p. 21-34. In French.

A historical review is given of the utilization of geothermal energy. Geothermal electric power generation on New Zealand is discussed. The energy crisis of the 1970s is considered, with emphasis on the role of the United Nations, and the distribution of geothermal sources in the southwest United States. A distinction is made between low energy and high energy geothermal sources. A discussion of the origin and applications of such sources is included. (B. J.)

**A76-19400** The energy crisis and a potential laser-fusion solution. K. M. Siegel (KMS Fusion, Inc., Ann Arbor, Mich.). *Journal of Applied Science and Engineering, Section A - Electrical Power and Information Systems*, vol. 1, Apr. 1975, p. 3-18.

The solution considered is based on the production of neutrons by fusion. The neutrons can be used in a reaction with lithium to obtain heat. They can also be employed in processes designed to supply hydrogen which can be used directly as fuel or as a basic material for obtaining other chemical substances. Studies conducted to prove the feasibility of this solution are discussed. For reasons of fuel compatibility with existing systems it would be advisable, for the more immediate future, to use as fuel methane obtained from

hydrogen in preference to hydrogen itself. An approach based on laser fusion for producing neutrons would make it possible to install appropriate equipment at the substation level. A description is given of a systematic investigation of the possibilities to achieve economic fusion with laser systems, taking into account the successful production of thermonuclear neutrons and economic mass production techniques developed for the required pellets. (G. R.)

**A76-19446 #** High-temperature solar heat sources for spacecraft (Solnechnye vysokotemperaturnye istochniki tepla dlia kosmicheskikh apparatov). V. A. Grilikhes, V. M. Matveev, and V. P. Poluektov (Moscow, Izdatel'stvo Mashinostroenie, 1975. 248 p. 208 refs. In Russian).

The development of high temperature solar heat sources to serve as energy sources for a variety of space applications is discussed. The systems considered consist of a concentrator for solar radiant energy, a receiver for the concentrated radiation, and a heat accumulator. The theoretical basis for the design of the system components is presented, and the characteristics of heat exchange in the receiver and accumulator are analyzed. The selection of design and operational parameters for power systems based on a solar heat source is discussed. (C. K. D.)

**A76-19583** Multiscale aerial and orbital techniques for management of coal-mined lands. F. J. Wobber (IBM Corp., Gaithersburg, Md.), O. R. Russell, and D. J. Deely (Earth Satellite Corp., Bethesda, Md.). *Photogrammetria*, vol. 31, Oct. 1975, p. 117-133. 10 refs.

The expansion of surface coal mining to meet the world's energy needs must include preplanning for environmental protection and the monitoring of reclamation progress. Due to the rapid changes in rates of mining, grading, and revegetating mined lands, the flexibility provided by satellite and multilevel aircraft inventory and monitoring systems is required. LANDSAT 1 imagery and small-scale color infrared aerial photography have unique advantages for performing a rapid regional inventory of disturbances in coal-mining areas, and have immediate cost benefits for regulatory agencies and the mining industry. Large scale photography is needed for comprehensive studies of acid mine drainage, and other mining related water quality control problems. A systematic analysis of nearly 50 mined-land features versus various scales of imagery has been tabulated for ease of reference by those involved in mined land studies. (Author)

**A76-19591 \*** Mixed metal vapor phase matching for third-harmonic generation. D. M. Bloom, J. F. Young, and S. E. Harris (Stanford University, Stanford, Calif.). *Applied Physics Letters*, vol. 27, Oct. 1, 1975, p. 390-392. Research supported by the University of California and AEC, Grant No. NGL 05 020 103.

Phase matching for frequency tripling of 1.06 microns is demonstrated in a homogeneous mixture of sodium and magnesium vapor. The ratio of Mg to Na vapor pressures required for phase matching is 2:1. This ratio is about 1/75 of that required to phase match Na with Xe. (Author)

**A76-19593 \* #** Improving aircraft energy efficiency. F. P. Povinelli, J. M. Klineberg, and J. J. Kramer (NASA, Office of Aeronautics and Space Technology, Aircraft Energy Efficiency Office, Washington, D.C.). *Astronautics and Aeronautics*, vol. 14, Feb. 1976, p. 18-31.

Investigations conducted by a NASA task force concerning the development of aeronautical fuel conservation technology are considered. The task force estimated the fuel savings potential, prospects for implementation in the civil air-transport fleet, and the impact of the technology on air-transport fuel use. Propulsion advances are related to existing engines in the fleet, to new production of current engine types, and to new engine designs. Studies aimed at the evolutionary improvement of aerodynamic design and a laminar flow control program are discussed and possibilities concerning the use of composite structural materials are examined. (G. R.)

**A76-19595 #** Get ready for the great debate on transportation R W Simpson (MIT, Cambridge, Mass) *Astronautics and Aeronautics*, vol 14, Feb 1976, p 38-45 9 refs

Three bills, which have been proposed by the Department of Transportation (DOT), advocate programs to 'deregulate' rail, trucking, and air transportation. Current transportation policies, which exist for about forty years, are critically examined, taking into account the representation of air transportation within DOT policy making. Attention is given to the pronounced rise in the standard prices for air transportation, problems of overcapacity, and questions related to a review of the objectives of the Airways/Airports Trust Fund and its operations G R

**A76-19598 #** Short-range transports to save fuel G Corning and P Sampath (Maryland, University, College Park, Md) *Astronautics and Aeronautics*, vol 14, Feb 1976, p 62-64 Research supported by the University of Maryland

An investigation was conducted concerning the possibilities to save fuel by using an aircraft designed specifically for the 500-mi range. It was found that 7.5% or more fuel could be saved by using such an aircraft in place of a 737-200. It is pointed out that the smaller operating weight of the 500-mi aircraft would also result in lower direct operating costs G R

**A76-19917 #** Laser thermonuclear fusion in the energetics of the future (Lazernyi termoiadernyi sintez v energetike budushchego) N G Basov, V B Rozanov, and N M Sobolevskii *Akademiia Nauk SSSR, Izvestia, Energetika i Transport*, Nov-Dec 1975, p 3-17 37 refs In Russian

The paper gives a review of the current state of theory and experimentation in the field of laser fusion. The theoretical principles of the fusion reaction involving the laser implosion of a deuterium-tritium pellet are discussed. A scheme is presented for the energy cycle of a laser fusion reactor, where continuously repeated microexplosions would be the source of useful energy. The feasibility of using different types of lasers for the fusion is considered among those discussed are neodymium lasers, and CO<sub>2</sub> lasers. The problem of neutron radiation damage of reactor walls is considered B J

**A76-19918 #** The basic technical characteristics of the demonstration tokamak fusion reactor /the T-20 device/ (Osnovnye tekhnicheskie kharakteristiki demonstratsionnogo termoiadernogo reaktora-tokamaka (ustanovka T-20)) V A Glukhikh, N A Monoszon, and G F Churakov *Akademiia Nauk SSSR, Izvestia, Energetika i Transport*, Nov-Dec 1975, p 18-27 In Russian

The tokamak reactor T-20 is designed for controlled fusion in deuterium-tritium plasma. It will be used for the investigation of physical processes in thermonuclear plasmas, and for preliminary research directed towards the development of operational fusion reactors. The vacuum system, the plasma heating system, the system for injecting neutral beams are discussed in detail. Lists containing the basic physical parameters of the reactor, and the basic technical reactor design data are included, along with reactor structural design diagrams B J

**A76-19919 #** Some questions associated with hybrid thermonuclear reactors (Nekotorye voprosy gibridnykh termoiadernykh reaktorov) I N Golovin, G E Shatalov, and B N Kolbasov *Akademiia Nauk SSSR, Izvestia, Energetika i Transport*, Nov-Dec 1975, p 28-34 In Russian

The feasibility of using the controlled fusion reaction involving deuterium and tritium as an energy source is examined. The possibility of combining a fusion reactor with a fission reactor is discussed. The production of tritium and that of plutonium in such hybrid reactors is considered. Cost comparisons are made for hybrid tokamak reactors and ordinary fusion and fission reactors. The benefits to be derived from the use of subcritical hybrid reactors are enumerated, and the question of how such reactors differ from those with an electronuclear technique for producing plutonium is dealt with. Detailed tables are presented for the cost analyses B J

**A76-20072** Hydrogen problems in energy related technology J P Hirth (Ohio State University, Columbus, Ohio) and H H Johnson (Cornell University, Ithaca, N Y) *Corrosion*, vol 32, Jan 1976, p 3-15 94 refs Grant No DAHC15-71 C-0253, Contract No N00014-75-C-0541

The paper is concerned with the phenomenological classification of hydrogen degradation phenomena in metals, with particular emphasis on problems related to hydrogen energy systems and geothermal energy systems. A state-of-the-art summary of materials capabilities with respect to hydrogen exposure is presented, along with important research areas in prospect. In particular, the mode of hydrogen entry distinguishes hydrogen stress cracking (HSC) and hydrogen environment embrittlement. The degraded mechanical property differentiates HSC and loss in tensile ductility, and the mode of failure discriminates HSC and microperforation by high-pressure hydrogen. Fundamental issues in hydrogen embrittlement are examined. Standardization and validation of tests used to study hydrogen embrittlement and hydrogen attack phenomena are discussed S D

**A76-20098** A general review of closed-cycle gas turbines using fossil, nuclear and solar energy K Bammert (Hannover, Technische Universität, Hannover, West Germany) Munich, Verlag Karl Thieme (Thieme Taschenbucher Volume 57), 1975 93 p 117 refs \$5.00

Aspects of thermodynamics are considered along with existing plants, the limits of the conventional closed-cycle gas turbines, the selection of the pressure ratio, and the Oberhausen-Helmum power plant. The components of a gas turbine plant are examined, taking into account the machine group, the heat exchanger, the coolers, and the gas heater. A description of nuclear gas turbines is presented, giving attention to the cycle diagram, turbosets, heat exchange equipment, new turboset concepts, and the lubricating oil and seal gas system. A conventionally arranged nuclear power plant is discussed along with a semi-integrated nuclear power plant and an integrated nuclear power plant G R

**A76-20111 #** Solar power stations in space R Ockert and G Wirths *Dornier-Post* (English Edition), no 34, 1975, p 18-22

Basic features of several design concepts for a solar power station to be located in a geostationary orbit are discussed, including a solar thermal power station (Patha et al., 1974), the satellite solar power station (SSPS) proposed by Glaser (1974), and the modular solar energy satellite (MOSES) proposed by Ruth (1974). Technical obstacles in the development of a design combining features of the SSPS and the MOSES are described. The system, incorporating a simple layout of longitudinally placed solar surfaces and concentration reflectors at an angle to them, is based on modular construction. The collector modules are covered with solar cells attached to rolls of fiberglass-reinforced kapton sheets. The micro waves generated by a crossed field amplifier are transmitted by a phased-array antenna. A major developmental obstacle is the presently inadequate lifetimes of the gimbal mounted gyroscopes and ion thrusters comprising the suggested attitude control system. A further problem is the requirement of a second-generation reusable transport with larger payload compartment than that of the Space Shuttle together with a reusable high power stage with electric engines and high specific impulse. The proposed system has a mass of roughly 30,000 tons and an expected output of about 5000 MW C K D

**A76-20150 \* #** Effect of fuel properties on performance of a single aircraft turbojet combustor H F Butze and R C Ehlers (NASA, Lewis Research Center, Cleveland, Ohio) *Combustion Institute, Fall Meeting, Palo Alto, Calif., Oct 20, 21, 1975, Paper 15* p 10 refs

The performance of a single-can JT8D combustor was investigated with a number of fuels exhibiting wide variations in chemical composition and volatility. Performance parameters investigated were combustion efficiency, emissions of CO, unburned

hydrocarbons and NOx, as well as liner temperatures and smoke. At the simulated idle condition no significant differences in performance were observed. At cruise, liner temperatures and smoke increased sharply with decreasing hydrogen content of the fuel. No significant differences were observed in the performance of an oil shale derived JP-5 and a petroleum based Jet A fuel except for emissions of NOx which were higher with the oil shale JP-5. The difference is attributed to the higher concentration of fuel-bound nitrogen in the oil shale JP-5. (Author)

**A76-20524** Wind power machines receiving fresh wind (Les éoliennes sont-elles dans le vent) F Seguer *La Recherche*, vol 7, Feb 1976, p 184-187. In French.

The history, current status, and future prospects of power generation by wind activated power plants is surveyed. Vane wind power devices similar to those used in ancient Sumer are still in use in Iran today, while European windmills have shifted in function from flour milling to water pumping. The devices are most feasible in isolated locations where dispersed energy sources are needed, but require efficient storage equipment because of the unreliable and varying wind input. Antenna type wind pickup designs lie dormant, but turning vane and turbine blade models are still of interest. An induction type rotating wind motor generating electric power is described. The outlook for practical and economic wind power electric generating plants in isolated areas and locations in developing countries, and associated problems, are discussed. Combinations with solar, batteries and power storage by lead batteries show some promise. R D V

**A76-20559** # A possible application of electric discharge CO2 lasers for laser thermonuclear fusion (Ob odnoi vozmozhnosti primeneniia elektroionizatsionnykh CO2 lazerev dlia tselei LTS) N G Basov, I A Berezhnoi, V A Boiko, V A Danilychev, V D Zvorykin, V V Ignat'ev, I V Kholin, and A Iu Chugunov. *Pis'ma v Zhurnal Tekhnicheskoi Fiziki*, vol 1, Dec 26, 1975, p 1105-1108. 5 refs. In Russian.

The paper proposes a new approach to plasma heating by the radiation of electric discharge CO2 lasers by which synchronous spherical irradiation of a target by single-cascade CO2-lasers of large aperture is accomplished by using the target as one of the resonator mirrors. In an experiment using one laser, a 300-J, 100 nsec pulse at 10% efficiency was obtained. For synchronous operation of many lasers, as would be required during real heating of a fusion target, a feedback arrangement could be used. Under real conditions, however, with targets of the order of about 1 cm, cavity length will have to range from 30 to 100 m, whereas in the present experiment, the cavity measured only 13.5 m in length. **A76-20566** # Review of current R & D program approaches to solar conversion D A Beattie (ERDA, Washington, D C) *International Energy Engineering Congress, Chicago, III*, Nov 4, 5, 1975, Paper 10 p.

Current approaches in the solar energy program of the Energy Research and Development Administration are outlined. It is predicted that 25% of total U.S. energy requirements will be provided by solar energy applications by the year 2020. A program is underway to demonstrate solar heating on a large scale by the end of 1977 and combined solar heating and cooling by the end of 1979. Both agricultural (crop drying, heat for greenhouses and animal shelters) and industrial applications are under investigation. An experimental 100 kW wind energy conversion system has been constructed, and the design of a second generation 100 kW system and of a first generation megawatt system has been initiated. Development programs in photovoltaic energy conversion are directed towards improvements in silicon cell technology, alternative materials, and power conditioning devices to permit tie-ins with power grids. A production of 500 MW per year by 1985 with an array price below \$500 per peak kilowatt is anticipated. Additional technologies under exploration include fuels from biomass, ocean thermal conversion, and solar thermal conversion. C K D

**A76-20567** # A technical, economic and environmental assessment of utilizing solar energy for heating/cooling and energy conversion R Romanchek (Pennsylvania Power and Light Co., Allentown, Pa.) *International Energy Engineering Congress, Chicago, III*, Nov 4, 5, 1975, Paper 9 p.

**A76-20650** Solar cells H J Hovel (IBM Thomas J. Watson Research Center, Yorktown Heights N Y) New York, Academic Press, Inc. (Semiconductors and Semimetals Volume 11), 1975. 274 p. 295 refs. \$14.50.

The present work is a general reference source in the field of photovoltaics, with special emphasis on heterojunction and Schottky barrier cells, thin film devices, and polycrystalline devices. An introductory description of solar cells is given along with most important material and device parameters. Featured topics include the process of photocurrent generation and the spectral response, the electrical behavior of a solar cell in the dark, the efficiencies of Si, GaAs, and CdS solar cells under various conditions, the effects of thickness on solar cell behavior, and the effects of grain boundaries in polycrystalline films. An introduction is presented to Schottky barrier, heterojunction, vertical multijunction, and grating solar cells. Radiation effects on cells exposed to the space environment are discussed, and device behavior under various temperature and intensity environments is described. Also discussed is solar cell technology, including crystal growth, diffusion, ion implantation, antireflective coatings, and ohmic contacts. S D

**A76-20716** # Geometrical aspects of the troposkien as applied to the Darrieus vertical-axis wind turbine B F Blackwell and G E Reis (Sandia Laboratories, Albuquerque, N Mex.) *American Society of Mechanical Engineers, Design Engineering Technical Conference, Washington, D C*, Sept 17-19, 1975, Paper 75-DET-42. 5 p. Members, \$1.00, nonmembers, \$3.00.

The equations derived to define a troposkien (the shape a completely flexible cable assumes when it is spun at a constant angular velocity about a vertical axis to which its two ends are attached) are described. The implications of the solutions on the design of a vertical axis wind turbine are discussed for cases where gravity is neglected. (Author)

**A76-20780** Analysis of polyphase commutator generator for wind-power applications R T Smith (Southwest Research Institute, San Antonio, Tex.) *IEEE Transactions on Aerospace and Electronic Systems*, vol AES-12, Jan 1976, p 39-41.

This paper describes the mathematical modeling of the ac polyphase commutator generator by means of Park's equations. For clarity, a two-phase, balanced-operation machine is analyzed. Equations of performance are developed in terms of familiar parameters. The machine is shown to have attractive characteristics for variable-speed constant frequency power generation, with possible application to wind-power systems. (Author)

**A76-20838** Model of solar-cell array for terrestrial use D Biran and M S Erlicki (Technion - Israel Institute of Technology, Haifa, Israel) *Solar Energy*, vol 17, no 6, 1975, p 325-329.

On the basis of solar radiation data, a computer method for the analysis of a terrestrial solar conversion system consisting of solar cell arrays, batteries, overcharge protection, and voltage, current and frequency-control devices has been developed. The method yields the cost-optimized solution for a specified location and any given load. The data in the memory may be adapted for any location on the basis of local climatic data, including the monthly averages of the sun's inclination, the average and minimum daily radiation, the daily sunshine period, and monthly temperature averages. Three types of systems are taken into account: slant angle set for year-round operation according to the 'worst' month, slant angle re-set according to the 'worst' month in each season, and slant angle re-set monthly. The required charging voltage, array area, and battery capacity are obtained together with the optimum slant angle, working cycle, and battery configuration. C K D

**A76-20839** Selection of design parameters for closed-circuit forced-circulation solar heating systems B J Brinkworth (University College, Cardiff, Wales) *Solar Energy*, vol 17, no 6, 1975, p 331-333

**A76-20840** Heat exchanger penalties in double-loop solar water heating systems. F de Winter (Atlas Corp., Santa Clara, Calif.) *Solar Energy*, vol 17, no 6, 1975, p 335-337 5 refs

In many solar water heating systems, it may prove desirable to use a double-loop system with a heat exchanger between the flat-plate collector and the water storage tank. This approach, using a second fluid which does not freeze in service and which does not lead to corrosion of metals, may be the most convenient way to avoid freezing or corrosion problems in the collector. Because of the heat exchanger, the collector is, however, forced to operate at a higher temperature with a corresponding performance penalty. A heat exchanger factor has been developed, which makes it possible to determine the collection performance penalty in a straightforward manner. When the heat exchanger is of the counterflow type and is operated so that the mass flowrate-specific heat products of the two streams are equal, the expression becomes very simple, and lends itself to direct optimization of heat exchanger size. Several sample optimization calculations are shown. (Author)

**A76-20841** Financial incentives for the adoption of solar energy design - Peak-load pricing of back-up systems. S L Feldman (Clark University, Worcester, Mass.) and B Anderson (Total Environmental Action, Harrisville, N H.) *Solar Energy*, vol 17, no 6, 1975, p 339-343 16 refs

Most solar energy systems for the space conditioning of buildings require a full sized back-up system for long periods of cloudy weather. If gas or electricity is a source of energy for that back-up system, not only does the building owner have to provide both a solar energy system and a back-up system, but the utility company has to build and maintain full sized facilities to provide for the demand by the back-up system during peak load conditions. One method to limit capacity design of utilities is to design a peak-load pricing scheme which would tend to flatten the utilities' load curve. The scheme could also provide incentives for the installation of solar energy design that would use electricity or gas as back-up systems during off-peak hours only. Indeed, the success of the diffusion of solar energy construction into widespread usage may depend upon such financial incentives to the consumer. (Author)

**A76-20842** Experimental performance of three solar collectors. R L San Martin (New Mexico State University, Las Cruces, N Mex.) and G J Fjeld (*International Solar Energy Society, Meeting, Fort Collins, Colo., Aug 1974*) *Solar Energy*, vol 17, no 6, 1975, p 345-349 11 refs

Three flat plate solar collectors were simultaneously tested for over six months: a water trickle collector, a typical collector with double glazing, and a thermal trap collector. The thermal trap collector employs a transparent solid (methyl methacrylate) adjacent to the fluid cooled collector plate. It is found that by the use of this transparent solid, which has a high transmittance of short wavelengths combined with a low transmittance of long wavelengths and a small thermal conductivity, high temperatures can be achieved. The comparative collector tests were performed for a variety of operational conditions. The collector efficiencies were experimentally determined, and analysis of the collector losses was accomplished. The thermal trap collector was found to have a higher operational efficiency than the other collector types and is capable of collecting solar energy for a longer period of time each day. At operating temperatures above 145 F, the thermal trap collector is more than twice as efficient as the water trickle collector. (Author)

**A76-20843** Cost of paraboloidal collectors for solar to thermal electric conversion. W W Shaner (Colorado State University, Fort Collins, Colo.) and H S. Wilson (Westinghouse Manufacturing Development Laboratory, Pittsburgh, Pa.) (*International Solar Energy Society, Meeting, Fort Collins, Colo., Aug*

*1974*) *Solar Energy*, vol 17, no 6, 1975, p 351-358 6 refs NSF-supported research

Preliminary cost estimates for the large-scale production and installation of paraboloidal solar collectors have been obtained. The design parameters incorporated in the optimization model used include aperture width, reflectivity, rim angle, contour error, and tracking error. The input data were derived from known technologies most suitable for the production of such collectors. The cost of materials is shown to be the largest contribution to overall manufacturing costs, while field costs (installation, pipe supports, foundations, etc.) account for almost half of the total costs. Cost functions developed for reflectors of varying aperture widths and rim angles indicate that module size influences the overall costs more strongly than either the choice of shell materials or the method of manufacture. Cost-performance relationships for reflectivity are presented. C K D

**A76-20844** A status report on the Sandia Laboratories solar total energy program. R P Stromberg (Sandia Laboratories, Albuquerque, N Mex.) (*International Solar Energy Society, Meeting, Fort Collins, Colo., Aug 1974*) *Solar Energy*, vol 17, no 6, 1975, p 359-366 ERDA-supported research

The solar community concept is a system designed to minimize the use of fossil fuel energy by optimum use of energy from solar collectors. Energy is collected at high temperature, stored in a thermal reservoir, and used to produce electricity. The thermal energy remaining after electricity production is either stored or distributed immediately for heating, air conditioning, hot water or process heat. A test bed designed for operation with loads approximately equivalent to 12-15 homes is under construction. Preliminary results of an analysis of a proposed one-thousand-home solar community system using the total energy computer program are presented. The system incorporates 150-9-15 by 15-25 m focusing collectors mounted in a N-S orientation which heat Therminol 66 fluid to 590 K. The energy is stored in a high temperature storage unit for use by a turbogenerator. The Therminol fluid is returned from the turbine to storage at 460 K, heat is rejected from the turbine condenser at 380 K to a low-temperature water storage system, from which water is distributed to individual homes. A collector test installation, consisting of a fluid loop system for supplying controlled temperatures and rates of flow to a collecting device, and an instrumentation trailer to process data are described. C K D

**A76-20845** The design requirements for a viable photochemical solar heating and cooling system. S G Talbert, D H Frieling, J A Eibling, and R A Nathan (Battelle Columbus Laboratories, Columbus, Ohio) (*International Solar Energy Society, Meeting, Fort Collins, Colo., Aug 1974*) *Solar Energy*, vol 17, no 6, 1975, p 367-372 10 refs

The results of a systems analysis and economic study of a photochemical solar energy system are presented and compared with a conventional hot-water solar energy system. Conversion efficiency, energy storage capacity, and life-cycle costs are the primary bases of comparison. The paper indicates the requirements to make a photochemical solar energy system technically and economically feasible and identifies potential advantages of the photochemical solar energy system: i.e., lower cost and lighter weight collector, cloudy-day effectiveness, smaller storage tank, storage at room temperature and uniform energy levels in the stored fluid, both winter and summer. Two possible problem areas have been identified for a photochemical system: anticipated higher initial cost of the working fluid, and possible deterioration of the energy storage capacity with time. (Author)

**A76-20846** Passive freeze protection for solar collectors. L W Bickle (L W Bickle and Associates, Albuquerque, N. Mex.) *Solar Energy*, vol 17, no 6, 1975, p. 373, 374.

Freeze damage is an important practical problem for water type solar collectors. In the past, electric resistance heaters, drain systems,

and separate ethylene glycol-water collection loops have commonly been used to prevent freezing. These techniques are effective but involve active components such as controls, heaters, valves, solenoids, pumps, heat exchangers, etc., that increase costs, degrade reliability and/or reduce overall efficiency. This note describes a simple passive concept that can be used to protect water-type solar collectors from freeze damage. Briefly, the water is allowed to freeze. As it freezes, however, it expands against a compliant region, and thus, the expansion does not damage the system. (Author)

**A76-21041** Experimental study of heat transfer in the channel of an open-cycle magnetohydrodynamic generator V V Kirillov, E P Reshetov, and V D Semenov (Akademiya Nauk SSSR, Nauchno Issledovatel'skii Institut Vysokikh Temperatur, Moscow, USSR) (*Teplofizika Vysokikh Temperatur*, vol 13, May-June 1975, p 634-643) *High Temperature*, vol 13, May-June 1975, p 573-580 12 refs Translation

**A76-21141** Bringing logic to urban transportation innovation D Brand *Technology Review*, vol 78, Jan 1976, p 38-45

Logical performance specifications are worked out for future urban transportation systems. Stages in the impact of massive use of private automobiles in congested urban areas are delineated, and dislocations in central business districts of cities are focused upon as a difficult problem. The limitations of fixed-schedule fixed route public transportation are examined, and dual mode (partly automated) transportation, personal rapid transport, and group rapid transit systems with very short or fraction-second headway capabilities are examined. The specific weight of walks and waits in gaining access to the primary system, and the acceptance attitudes of potential users, are considered critical, and the real choices opted by frustrated potential users are examined with attention to sociological aspects. The question of real cost savings attainable via any of these systems is scrutinized. R D V

**A76-21145** Resistivity dependence of silicon solar cell efficiency and its enhancement using a heavily doped back contact region M A Green (New South Wales, University, Kensington, Australia) *IEEE Transactions on Electron Devices*, vol ED-23, Jan 1976, p 11-16 20 refs

For the normal solar-cell geometry, there is an upper limit to the cell conversion efficiency for each value of the silicon-substrate resistivity. This limit cannot be exceeded regardless of possible improvements in material lifetime properties. It peaks for a value of substrate resistivity of about 0.1 ohm cm for p-type substrates, corresponding to an acceptor concentration of 7 by 10 to the 23rd power per cu meter. The limit can be exceeded if the cell structure is modified. A high-low junction incorporated near the ohmic back contact to a suitably designed device not only improves the current-collecting properties for a given cell thickness, but also increases the ultimate conversion efficiency. (Author)

**A76-21173** Energy storage - Feasibility study of an experiment involving solar energy collection, its storage by a super-flywheel, and electric power generation (Stockage d'énergie - Etude de faisabilité d'une expérience de captation, de stockage par accumulation cinétique et de restitution d'énergie électrique d'origine solaire) B Taty (Centre National d'Etudes Spatiales, Division Systèmes de Stabilisation et Pilotage, Toulouse, France) *L'Aéronautique et l'Astronautique*, no. 56, 1976, p 46-51 In French

A system for collecting and storing solar energy and for converting it into electric power continuously 24 hours a day and all year round is described. The energy is collected by means of solar panels which are oriented towards the direction of the sun at noon. The energy is stored by means of a superflywheel (kinetic accumulator) which is mounted on magnetic or roller bearings and includes a reversible electric motor. It is shown that it may be feasible to

develop a solar energy system furnishing 1 kW of power with a solar panel with a surface area of 20 sq m and with a flywheel whose rotor weighs 100 to 300 kg. B J

**A76-21204** Effect of constructional parameters on the temperature characteristics of silicon photoconverters V G Doroshenko and E S Russkikh (*Geliotehnika*, no 3-4, 1975, p 5-11) *Applied Solar Energy*, vol 11, no 3-4, 1975, p 3-7 5 refs Translation

Silicon photoelectric cells with differences in depth of the n(+)-p junction, structure of the rear contact, and translucency of the operational surface are investigated over a range of 100-400 K. Short circuit current and power are determined along with open-circuit voltage, and spectral sensitivity. Discrepancies in the results of earlier studies appear to be due to structural differences in the models used. Reduced depth of the junction, the use of multi-layered rear contacts on cells with allowed bases, highly transparent operational surfaces, and deposition of a protective covering to lower equilibrium temperature will increase the efficiency of solar cells. C K D

**A76-21208** Approximate solar-energy concentrator consisting of wedge-shaped facets of constant transverse curvature A Sh Sharafi, G Ia Umarov, and A Abduazizov (Akademiya Nauk Uzbekskoi SSR, Fiziko-Tekhnicheskii Institut, Tashkentskii Gosudarstvennyi Universitet, Tashkent, Uzbek SSR) (*Geliotehnika*, no 3-4, 1975, p 35-38) *Applied Solar Energy*, vol 11, no 3-4, 1975, p 28-31 Translation

A method of obtaining reliability estimates, using quantitative indices is demonstrated by the example of the power supply of a relay line station equipped with solar cells, electrical accumulators, and diesel generator units. Causes of failure in the power supply from solar cells are analyzed. V P

**A76-21470** The depletion layer collection efficiency for p-n junction, Schottky diode, and surface insulator solar cells M A Green (New South Wales, University, Kensington, Australia) *Journal of Applied Physics*, vol 47, Feb 1976, p 547-554 24 refs Research supported by the Radio Research Board of Australia

The collection efficiency for carriers optically generated in the depletion region of photovoltaic solar cells is analyzed. For p-n junction devices, it is shown that virtually all these carriers are collected provided the minority carrier diffusion lengths are larger than the width of the depletion layer, and that a reasonable percentage will be collected even when the diffusion lengths are much smaller than this. For Schottky diode devices, the collection efficiency for carriers optically generated near the metal-semiconductor interface is shown to be small and to depend critically

upon the exact model of the contact used. As a consequence the spectral response of Schottky diodes at short wavelengths is shown to contain considerable information regarding the physics of the metal-semiconductor contact. New surface insulator devices are shown to have a short-wavelength response superior to that of Schottky diodes. (Author)

**A76-21471** High-voltage vertical multijunction solar cell. R. J. Soukup (Iowa, University, Iowa City, Iowa). *Journal of Applied Physics*, vol. 47, Feb. 1976, p. 555-559. 13 refs.

The vertical multijunction solar cell with covering lens is a photovoltaic device which promises efficiencies greater than that predicted under ideal conditions for any other structure. The mathematical analysis presented here illustrates this statement. In addition the structure described here is capable of a high-voltage output for small solar cell dimensions, a feature which makes this device attractive for many applications where other designs are impractical. The analysis predicts the output short circuit current, open-circuit voltage, maximum power, and an efficiency of 21% for a silicon homojunction solar cell. (Author)

**A76-21472** Preparation and properties of InP/CdS solar cells. J. L. Shay, S. Wagner (Bell Telephone Laboratories, Inc., Holmdel, N.J.), K. J. Bachmann, and E. Buehler (Bell Telephone Laboratories, Inc., Murray Hill, N.J.). *Journal of Applied Physics*, vol. 47, Feb. 1976, p. 614-618. 16 refs.

The preparation and properties of the recently reported InP/CdS single-crystal solar cells having a solar power conversion efficiency of 12.5% is described. A process for increasing the efficiency of these and inadvertently inferior cells to 14% is outlined. The ultimate efficiency achievable with InP/CdS using state-of-the-art liquid-encapsulated Czochralski p-type InP substrates is calculated to be 17.2% for AM2 conditions and 14.0% for AMO conditions. (Author)

**A76-21769** Theoretical analysis of graded-band-gap gallium-aluminum arsenide/gallium arsenide p-Ga<sub>1-x</sub>Al<sub>x</sub>/As/p-GaAs/n-GaAs solar cells. M. Konagai and K. Takahashi (Tokyo Institute of Technology, Tokyo, Japan). *Solid-State Electronics*, vol. 19, Mar. 1976, p. 259-264. 17 refs.

Graded-band-gap p-Ga<sub>1-x</sub>Al<sub>x</sub>/As/p-GaAs/n-GaAs solar cell structures are analyzed as a function of the drift field in the surface layer and thickness of the p-GaAs layer. Such cells allow conversion efficiencies higher than conventional GaAs cells due to the reduction of the surface recombination effect. The p-type GaAs is preferable, because the electron diffusion length is several times larger than the hole diffusion length. The optimum thickness of the p-GaAs layer is calculated for AMO (6000 K blackbody radiation) and with typical parameters assumed. The efficiency strongly depends on the drift field E, and the maximum energy conversion efficiency approaches 20% at -3000 V/cm. (Author)

**A76-21877** Theoretical performance of vertical axis wind turbines. E. E. Lapin (Aerospace Corp., El Segundo, Calif.). *American Society of Mechanical Engineers, Winter Annual Meeting, Houston, Tex., Nov. 30-Dec. 4, 1975, Paper 75-WA/Ener-1*. 11 p. 8 refs. Members, \$1.50, nonmembers, \$3.00.

An elementary theory is developed for the power extraction capability of a vertical axis wind turbine comprising a number of blades which operate either at fixed or at continuously variable incidence. The performance according to that theory is computed for some examples and applied to estimate the economic feasibility of a turbine of 10 megawatt rating. (Author)

**A76-21927** Preliminary analysis of heat pipe heat exchangers for heat recovery. J. O. Amode (Amahdu Bello University, Zaria, Nigeria) and K. T. Feldman (New Mexico, University, Albuquerque, N. Mex.). *American Society of Mechanical Engineers, Winter Annual Meeting, Houston, Tex., Nov. 30-Dec. 4, 1975, Paper*

**75-WA/HT-36**. 11 p. 11 refs. Members, \$1.50, nonmembers, \$3.00. Research supported by the University of New Mexico.

A preliminary analysis of fin tube heat pipe heat exchangers for air-to-air heat recovery was conducted. The analysis uses conventional heat exchanger design techniques and a new heat pipe design technique which includes probabilistic design of artery wick heat pipes. The heat transfer capability of the heat pipes may be matched with that of the finned tubes in order to optimize the heat exchanger performance. The results predicted by the heat pipe heat exchanger analysis program are compared to one set of experimental data available in the literature, and relatively good agreement was obtained. Heat pipe heat exchangers may be used as recuperators in heating and ventilating systems, in gas turbines, in steam power plants and in various process industry applications. (Author)

**A76-21931** Waste heat utilization through the use of heat pipes. A. Basiulis and M. Plost (Hughes Aircraft Co., Electron Dynamics Div., Torrance, Calif.). *American Society of Mechanical Engineers, Winter Annual Meeting, Houston, Tex., Nov. 30-Dec. 4, 1975, Paper 75-WA/HT-48*. 6 p. 7 refs. Members, \$1.50, nonmembers, \$3.00.

The basic heat pipe consists of a closed container which has in its interior a capillary wick structure that contains a vaporizable fluid. Heat between a heat input section and a heat output section of the pipe is transferred by means of an evaporation-condensation cycle. A number of heat pipes which are currently used in life tests are listed in a table, taking into account pipes with operational temperatures in the range from 45 to 650°C. Examples are discussed to illustrate the employment of heat pipes in the beneficial utilization of waste heat. Attention is given to process control applications, plume control in sulfur scrubbers, and the improvement of thermodynamic efficiency of gas turbines through heat recovery. G. R.

**A76-21960** Power turbines for Ocean Thermal Energy Conversions systems. L. L. Ambis (Massachusetts, University, Amherst, Mass.) and R. J. Veenema, Jr. *American Society of Mechanical Engineers, Winter Annual Meeting, Houston, Tex., Nov. 30-Dec. 4, 1975, Paper 75-WA/OCE-11*. 9 p. 8 refs. Members, \$1.50, nonmembers, \$3.00.

The design procedure used to evaluate possible power turbine configurations for Ocean Thermal Energy Conversion (OTEC) systems based on a closed Rankine Cycle power plant with propane, ammonia, or R12/31 as working fluids is described. A procedure incorporating pitch diameter analysis and a design computer program are used for general axial flow turbine analysis, yielding turbine geometry and total to static turbine efficiency predictions. Resulting designs are subjected to off-design analysis. Results obtained for a turbine with a 35 Mw output for a Gulf Stream site are presented. The off-design behavior of propane is more favorable to cycle operation than that of ammonia, a large design diameter for these outputs is the major drawback of R12/31, which would require smaller turbines than the other working fluids. **A76-21969** A theory of concentrators of solar energy on a central receiver for electric power generation. M. Riaz (Minnesota, University, Minneapolis, Minn.). *American Society of Mechanical Engineers, Winter Annual Meeting, Houston, Tex., Nov. 30-Dec. 4, 1975, Paper 75-WA/Sol-1*. 9 p. 5 refs. Members, \$1.50, nonmembers, \$3.00. NSF Grant No. GI-41019.

The modeling of the performance of large-area solar concentrators for central receiver power plants is formulated using a continuum field representation of ideal heliostat arrays that accounts for two governing factors: the law of reflection of light rays imposes steering constraints on mirror orientations, the proximity of mirrors creates shadow effects by blocking the incident and/or reflected solar radiation. The results of a steering analysis which develops the space-time characteristics of heliostats and of a shadow analysis which determines the local effectiveness of mirrors in reflecting solar energy to a central point are combined to obtain in closed analytical

form the global characteristics of circular concentrators. These characteristics which appear as time profiles for mirror orientations, for effective concentration areas (i.e., reflected solar flux), and for concentration ratios, establish theoretical limits of performance against which actual or realistic solar power systems can be compared and assessed. (Author)

**A76-21971 # Computer modeling of heat pumps and the simulation of solar-heat pump systems** T L Freeman, W A Beckman, J W Mitchell, and J A Duffie (Wisconsin, University, Madison, Wis.) *American Society of Mechanical Engineers, Winter Annual Meeting, Houston, Tex., Nov 30-Dec 4, 1975, Paper 75-WA/Sol-3* 16 p 19 refs. Members, \$1 50, nonmembers, \$3 00 NSF Grant No. GI-34029, ERDA Grant No. 2588

A generalized digital computer model of a residential size heat pump is described. The modeling strategy is to 'design' or 'size' the four major components in the vapor compression cycle to yield any desired design condition performance. Once the system has been defined, the program is able to compute a 'performance map' of heat added and heat rejected at all possible combinations of inlet flow-stream conditions. The model is applied to the thermal performance simulation of several different solar-heat pump heating and cooling systems using the modular simulation program, TRNSYS. Performance of 'in-line' heat-pump boosted solar systems which use solar energy storage as the heat source are compared to 'parallel' systems where the heat pump acts only as an auxiliary and ambient air provides the source. A simplified economic analysis shows that the parallel system is the more cost effective configuration. (Author)

**A76-21972 # Simulation of a small solar-power station** M H Cobble and P R Smith (New Mexico State University, Las Cruces, N. Mex.) *American Society of Mechanical Engineers, Winter Annual Meeting, Houston, Tex., Nov 30-Dec 4, 1975, Paper 75-WA/Sol-4*, 8 p 6 refs. Members, \$1 50, nonmembers, \$3 00 NSF Grant No. OIP-74-08333

A numerical model for simulating a solar electric generating plant has been developed which is capable of simulating the tracking solar collector, the solar boiler, the prime mover, and the electrical generator. Various methods of energy storage, such as heat storage in a liquid, gravitational potential, etc., can be treated. The model is time-dependent and the solar radiation and atmospheric conditions are generated within the simulation program as a function of time. An example of the use of the model is presented and consists of a simulation of a 1 KW electric generator driven by an open cycle gas turbine. Solar energy is supplied to the turbine by a tracking cylindrical parabolic concentrator. (Author)

**A76-21973 # Evaporator design for sea solar power cycles** A S Woodhull (United Engineers and Constructors, Inc., Philadelphia, Pa.) *American Society of Mechanical Engineers, Winter Annual Meeting, Houston, Tex., Nov 30-Dec 4, 1975, Paper 75-WA/Sol-5* 12 p 11 refs. Members, \$1 50, nonmembers, \$3 00 Research supported by TRW, Inc., NSF Grant No. C-958

In a closed ocean thermal power system, the operating conditions for evaporator and condenser are small temperature differences, high flow rates and low water-side pressure drop in order to minimize parasitic losses. Tube and shell cross-flow heat exchangers were investigated for this study using ammonia as the working fluid. These choices were dictated by the present development status of shell and-tube heat exchangers and the favorable thermodynamic properties of ammonia. A stringent overall working fluid pressure drop limitation, imposed by system constraints, was met by designing the evaporator with acceptable pressure drop by varying baffle spacing. Quality of the two-phase mixture was determined to be the most important design parameter. The significant result of this study is that a forced convection ammonia evaporator can be designed to meet the overall system requirement of pressure drops, flow rates and duty, with present technology and analytical procedures. (Author)

**A76-21974 # Construction and evaluation of linear segmented solar concentrators** P Desai, J R Williams, A M Lindsey (Georgia Institute of Technology, Atlanta, Ga.), and J Rollins *American Society of Mechanical Engineers, Winter Annual Meeting, Houston, Tex., Nov 30-Dec 4, 1975, Paper 75-WA/Sol-6* 8 p. Members, \$1 50, nonmembers, \$3 00 NSF Grant No. GI 43936

Two types of linear faceted collectors suitable to satisfy energy needs in the intermediate temperature range between 100 C and 300 C are examined. These are the segmented plane solar concentrator (SPSC) and the faceted fixed mirror concentrator (FFMC). A comparative performance evaluation of the SPSC for several receiver configurations is presented. Calculated heat flux onto the heat exchanger is compared with measurements obtained by scanning a broad spectral response detector across the focal plane in terms of the concentrator efficiency of the FFMC. (Author)

**A76-21975 # Low cost solar augmented heat pump system for residential heating and cooling** J M Alcone (Sandia Laboratories, Albuquerque, N. Mex.) *American Society of Mechanical Engineers, Winter Annual Meeting, Houston, Tex., Nov 30-Dec 4, 1975, Paper 75-WA/Sol-7* 15 p 8 refs. Members, \$1 50, nonmembers, \$3 00

The analysis and design of a low cost solar collector/heat storage system configured to take advantage of the characteristics of conventional air-to-air heat pumps is presented. The dynamical interaction of the various system components is examined and the resulting design constraints are given. The system, as proposed, eliminates the collector costs associated with conventional solar systems while requiring an increase of 50% in the volume required for thermal storage. (Author)

**A76-21976 # Solar assisted heat pump system - A parametric study for space heating of a characteristic house in Madison, Wisconsin** R C Bosio (Dow Chemical Co., Midland, Mich.) and N V Suryanaryana (Michigan Technological University, Houghton, Mich.) *American Society of Mechanical Engineers, Winter Annual Meeting, Houston, Tex., Nov 30-Dec 4, 1975, Paper 75-WA/Sol-8* 15 p 12 refs. Members, \$1 50, nonmembers, \$3 00

**A76-21977 # Cost optimization of solar heating of buildings in northern regions** G J E Willcutt, Jr., B D Hunn (California, University, Los Alamos, N. Mex.), and T B McSweeney (Combustion Engineering Power Systems, Windsor, Conn.) *American Society of Mechanical Engineers, Winter Annual Meeting, Houston, Tex., Nov 30-Dec 4, 1975, Paper 75-WA/Sol-9* 13 p 9 refs. Members, \$1 50, nonmembers, \$3 00

A detailed computer model is developed to simulate the performance, on an hourly basis, and to optimize the cost of solar heated buildings in northern regions characterized by cold and/or cloudy climate. The original version of this model was applied to 1971 Ottawa weather data and the details have been reported elsewhere. The present model includes improvements in the original model and extends its application to five Canadian cities (Vancouver, B.C., Edmonton, Alta., Winnipeg, Man., Ottawa, Ont., and Fredericton, N.B.) for the years 1970 and 1971. For each simulated year the system cost is optimized as a function of collector size for representative values of the other system parameters (storage size, number of glazings, etc.). Annual combined solar/conventional system costs are determined with collector cost and conventional fuel cost as parameters. Comparison is made between the effects of the amount of insolation received, cloud cover, and severity of the heating demand on system performance and cost. (Author)

**A76-21978 # Simulation of solar heated buildings** P R Smith (New Mexico State University, Las Cruces, N. Mex.) and B P Gupta *American Society of Mechanical Engineers, Winter Annual Meeting, Houston, Tex., Nov 30-Dec 4, 1975, Paper 75-WA/Sol-10* 7 p 5 refs. Members, \$1 50, nonmembers, \$3 00

A simulation of solar heated buildings was developed in order to aid the design of such buildings now under construction on the campus of New Mexico State University. The time dependent energy

equations for the various elements of the heating system, the solar collectors, the heat storage tank, the auxiliary heating unit, and the building itself were solved by a fourth order Runge-Kutta integration scheme on the digital computer. The simulation is fairly general in that it allows treatment of buildings of any size and solar collectors of any design. Further, different wall cross-sections, percents of window area to wall area, insulations, roof cross-sections, etc. can all be examined. Ambient temperature can be introduced from weather bureau data as a function of time, either in tabular form from weather bureau data or it can be internally generated. As an example of the utility of the simulation, results are presented for the operation of the New Mexico State University Solar House. (Author)

**A76-21979 #** A solar heating system for a northern New Mexico adobe house. M. W. Edenburn (Sandia Laboratories, Albuquerque, N. Mex.) and F. C. Wessling, Jr. (New Mexico University, Albuquerque, N. Mex.) *American Society of Mechanical Engineers, Winter Annual Meeting, Houston, Tex., Nov. 30-Dec. 4, 1975, Paper 75-WA/Sol-11* 9 p. 7 refs. Members, \$1.50, non members, \$3.00

**A76-22111** Geothermal investigations of the U.S. Geological Survey in Long Valley, California, 1972-1973. L. J. P. Muffler (U.S. Geological Survey, Menlo Park, Calif.) and D. L. Williams (U.S. Geological Survey, Denver, Colo.) *Journal of Geophysical Research*, vol. 81, Feb. 10, 1976, p. 721-724. 45 refs.

During 1972 and 1973 the U.S. Geological Survey (USGS) conducted detailed geological, geophysical, hydrological, and geochemical investigations in Long Valley, California, as part of a new geothermal research program. The goal of these investigations was to understand a typical hot water geothermal system, thus providing a basis for extrapolation to other hot water areas and for regional exploration and assessment of geothermal resources. Although the USGS investigations have thoroughly characterized the surface expression and geophysical signatures of the Long Valley geothermal system, our understanding of the geothermal system at depth is incomplete. The available data allow us to make only a crude estimate of 350-700 MW cent. for the electric power generation potential. Refinement of this estimate must await exploration of the area by deep drill holes. (Author)

**A76-22112** The near-surface hydrothermal regime of Long Valley caldera. A. H. Lachenbruch, M. L. Sorey, J. H. Sass (U.S. Geological Survey, Menlo Park, Calif.), and R. E. Lewis (U.S. Geological Survey, Garden Grove, Calif.) *Journal of Geophysical Research*, vol. 81, Feb. 10, 1976, p. 763-768. 10 refs.

Temperature in 29 holes drilled to depths up to 30 m and in 7 deeper holes (up to 300 m) within the caldera have been measured in connection with a study of the thermal state of the Long Valley geothermal area. A number of thermal conductivity measurements were undertaken to obtain rough estimates of conductive heat flow. Attention is given to the temperature patterns determined with the aid of the measured data and some tentative generalizations regarding the Long Valley geothermal system. G. R.

Lewis (U.S. Geological Survey, Water Resources Div., Laguna Niguel, Calif.) *Journal of Geophysical Research*, vol. 81, Feb. 10, 1976, p. 785-791. 23 refs.

**A76-22115** Audiomagnetotelluric sounding as a reconnaissance exploration technique in Long Valley, California. D. B. Hoover, F. C. Frischknecht, and C. L. Tippens (U.S. Geological

Survey, Denver, Colo.) *Journal of Geophysical Research*, vol. 81, Feb. 10, 1976, p. 801-809. 11 refs.

An audiomagnetotelluric (AMT) sounding system developed by the U.S. Geological Survey appears to be an effective technique for reconnaissance exploration to detect shallow resistivity anomalies associated with geothermal reservoirs. The equipment operates within the frequency range of 8-18,600 Hz by using nine logarithmically spaced narrow band filters. The technique has been evaluated in Long Valley, California, where the results from dc resistivity and time domain electromagnetic surveys were available for control. The AMT method outlines two linear zones of low resistivity that correlate well with known hot springs in the area. Generally, good agreement was obtained with the results of other electrical methods. (Author)

**A76-22313 \*** The manufacture of hydrogen from coal. C. L. Tsaros, J. L. Arora, and K. B. Burnham (Institute of Gas Technology, Chicago, Ill.) *Society of Automotive Engineers, National Aerospace Engineering and Manufacturing Meeting, Culver City, Calif., Nov. 17-20, 1975, Paper 751095* 25 p. NASA-sponsored research.

The conversion of coal to hydrogen is studied from the viewpoint of overall plant efficiency for three different processes: suspension gasification, fluidized bed gasification, and fluidized steam-iron process. The basic principles of these processes are reviewed, and total energy requirements are estimated and complete energy balances are made for each process, on the assumption that each model plant is self-contained, with no power imported. Overall plant efficiencies for conversion of coal to major gaseous products plus byproducts were determined to be: suspension gasification - 57.0%, fluidized-bed gasification - 66.4%, fluidized steam-iron process - 62.6%. Similar results are presented for methane liquefaction from coal using a process design based on hydrogasification, and it is found that conversion of coal to pipeline methane is much more efficient and less expensive than hydrogen conversion if a portion of the coal is converted to synthesis gas and this gas is used to hydrogenate more coal to methane. P. T. H.

**A76-22496 #** Wind energy utilization. A bibliography with abstracts - Cumulative volume 1944/1974. Research sponsored by NSF, ERDA, and NASA. Albuquerque, University of New Mexico, 1975. 484 p.

Bibliography, up to 1974 inclusive, of articles and books on utilization of wind power in energy generation. Worldwide literature is surveyed, and short abstracts are provided in many cases. The citations are grouped by subject: (1) general, (2) utilization, (3) wind power plants, (4) wind power generators (rural, synchronous, remote station), (5) wind machines (motors, pumps, turbines, windmills, home-built), (6) wind data and properties, (7) energy storage, and (8) related topics (control and regulation devices, wind measuring devices, blade design and rotors, wind tunnel simulation, aerodynamics). Cross-referencing is aided by indexes of authors, corporate sources, titles, and keywords. R. D. V.

**A76-22695** Greater Los Angeles Area Energy Symposium, 1st, Los Angeles, Calif., April 3, 1975. Proceedings. Symposium sponsored by the American Nuclear Society and Los Angeles Council of Engineers and Scientists. North Hollywood, Calif., Western Periodicals Co. (Los Angeles Council of Engineers and Scientists Proceedings Series Volume 1), 1975. 230 p. \$25.

The subjects considered are related to fossil fuels, nuclear energy, and alternate energy sources. Attention is given to a solar thermal conversion power plant siting analysis, the economic potential for wind energy conversion, tidal and wave power, and geothermal power. A number of advanced concepts are also considered, taking into account questions of technology transfer and the energy problem, a solar energy storage system, the use of hydrogen-rich automotive fuels, clean fuels from municipal solid waste, and regional power distribution via power relay satellite.

**A76-22696** Coal conversion - An overview of status and potential. J. B. O'Hara (Ralph M. Parsons Co., Pasadena, Calif.) In Greater Los Angeles Area Energy Symposium, 1st, Los Angeles, Calif., April 3, 1975, Proceedings North Hollywood, Calif., Western Periodicals Co., 1975, p. 47-57. 5 refs

The coal conversion considered involves the transformation of coal from its solid form to a liquid, gaseous, or low-ash solid product which will meet environmental protection standards. The energy requirements of the State of California in relation to available energy sources are examined. It is found that a use of coal conversion products represents one of several approaches to obtain needed supplies of 'clean' energy at an economically acceptable price. The available coal reserves in the western U.S. are considered along with details concerning the U.S. coal conversion development program. Various coal conversion processes are discussed, giving attention to gasification and liquefaction procedures. G R

**A76-22697** Solar thermal conversion power plant siting analysis. W. A. Kammer (Aerospace Corp., Energy and Resources Div., El Segundo, Calif.) In Greater Los Angeles Area Energy Symposium, 1st, Los Angeles, Calif., April 3, 1975, Proceedings North Hollywood, Calif., Western Periodicals Co., 1975, p. 104-111 NSF supported research

This paper highlights the results of an extensive, but preliminary, siting analysis for large solar thermal conversion power plants accomplished in support of the Solar Thermal Mission Analysis Study. Based on sunshine hours and insolation data, the geographic boundaries of the analysis were established as the southwestern United States. Land areas were eliminated as unsuitable in the analysis by the sequential application of individual technical and institutional exclusion criteria at two levels of severity: most stringent and least stringent. If adequate cooling can be provided, the potentially suitable area that was identified consistent with the most stringent exclusion criteria would support the generation of electrical energy adequate to meet the projected southwestern United States demand in the year 2000. The potential exists, if the least stringent criteria are used, for providing about eight times the region's electrical energy demands. (Author)

**A76-22698** The economic potential for wind energy conversion. M. Dubey and U. Coty (Lockheed-California Co., Burbank, Calif.) In Greater Los Angeles Area Energy Symposium, 1st, Los Angeles, Calif., April 3, 1975, Proceedings North Hollywood, Calif., Western Periodicals Co., 1975, p. 112-121. 6 refs

Wind-energy conversion is an attractive alternative to the conversion of fossil fuel for our future energy needs. The problem is to prove the concept is economically competitive with conventional systems, compatible with the user's applications, and acceptable to the public. To explore these questions, an approach is suggested which may succeed in defining the potential market and thus portend the birth of a new giant industry. (Author)

**A76-22699** Solar energy storage systems. A. G. Hammett. In Greater Los Angeles Area Energy Symposium, 1st, Los Angeles, Calif., April 3, 1975, Proceedings North Hollywood, Calif., Western Periodicals Co., 1975, p. 159-164

Energy storage methods and materials are reviewed. A simple heat pump storage concept is described which is based on the capability of storing relatively large amounts of energy using latent heat resulting from the phase change of certain materials. Heat is obtained from the sun during the daytime and distributed at night. With a lithium chloride/water mixture, it is shown that 83% of the solar input is available for space heating during the daytime (regenerative cycle) and 97% is available during night time (heat pump cycle). In effect, the heat from the sun that is available for space heating is doubled. (Author)

**A76-22700** Some considerations involving hydrogen-rich automotive fuels. S. Lampert and G. A. Hoffman (Southern California, University, Los Angeles, Calif.) In Greater Los Angeles

Area Energy Symposium, 1st, Los Angeles, Calif., April 3, 1975, Proceedings North Hollywood, Calif., Western Periodicals Co., 1975, p. 165-181. 19 refs

The investigation is concerned with problems related to the gradual depletion of the world's fossil reserves. Societal demands for portable energy are examined and fossil, thermal, and electrolytic resources for producing future automotive energy are considered. A study is conducted regarding automotive-fuel costs for the next 50 years, taking into account cost benefits and questions related to distribution and storage. A description is given of the renewable sources for transportation fuels beyond the fossil era, giving attention to economic factors, aspects of energy storage, a methane production system, and land use planning factors. It appears that the least-cost system would include solar thermal collectors with on-site closed cycle hydrogen thermochemical converters and the flow of hydrogen and carbon compounds to methane reactors. G R

**A76-22701** Regional power distribution via Power Relay Satellite. K. A. Ehricke (Rockwell International Corp., El Segundo, Calif.) In Greater Los Angeles Area Energy Symposium, 1st, Los Angeles, Calif., April 3, 1975, Proceedings North Hollywood, Calif., Western Periodicals Co., 1975, p. 204-209.

Energy transmission via space link offers an attractive solution to many problems where oceans and difficult terrains must be crossed, where territories of several nations must be traversed or where economic and ecological considerations mitigate against large land allocations for right-of-way. Electric energy, generated at a primary source location, is fed into a large antenna system where it is converted to microwave energy and shaped into a beam. The beam is focused on a Power Relay Satellite in stationary orbit and reflected to a distant receiving station near load centers, reconverted to electricity and distributed locally. The system and its performance are described. The required technology on earth and in orbit, prospective availability, environmental impact and cost are reviewed. The economy of the concept in the framework of the overall energy development and in comparison to other energy transmission systems is discussed. (Author)

**A76-23057** Sensitivity of the power density of a surface-ionization thermionic converter to increases of the cathode surface area by surface relief. Iu. A. Dunaev, V. I. Babanin, A. S. Mustafaev, V. I. Sitnov, and A. I. Ender (Akademiia Nauk SSSR, Fiziko-Tekhnicheskii Institut, Leningrad, USSR) (*Zhurnal Tekhnicheskoi Fiziki*, vol. 45, July 1975, p. 1486-1489) (*Soviet Physics - Technical Physics*, vol. 20, no. 7, 1976, p. 938-940. 9 refs. Translation)

Volume 6 - Proceedings of the Sixth Annual Pittsburgh Conference, Pittsburgh, Pa., April 24, 25, 1975. Part 1. Pittsburgh, Pa., Instrument Society of America, 1975, p. 127-131. 10 refs. Contract No. NAS3 17827

A process for the recovery of steel mill stack dust has been developed and is being used to recover secondary metals by a small company in Georgia. The process is energy intensive and wind generators were studied as a means of supplying energy for part of the recovery process. Some of the results of this study will be presented. (Author)

**A76-23166** Unconventional energy converters (Unkonventionelle Energiewandler). E. F. Schmidt. Berlin, Elsevier-Verlag, 1975. 179 p. 208 refs. In German. \$22.60

Aspects of unconventional energy conversion are considered, taking into account an analysis of energy technology, the systematics of unconventional energy conversion, thermodynamic and electric foundations, and questions concerning the changing of electrical energy from one form into another. Approaches for the conversion of chemical energy into electrical energy are examined, giving

attention to the thermodynamic and electrochemical principles of fuel cell operation, fuel cell technology, battery technology for fuel-cell power systems, and an evaluation of fuel cell applications from a systems point of view. Photovoltaic solar energy converter cells are discussed along with thermoelectric devices, thermionic energy converters, and magnetohydrodynamic power generation.

**A76-23661** Application of thin films to solar energy utilization. D M Mattox (Sandia Laboratories, Albuquerque, N Mex.) (*American Vacuum Society, National Symposium, 22nd, Philadelphia, Pa., Oct 28-31, 1975*) *Journal of Vacuum Science and Technology*, vol 13, Jan-Feb 1976, p 127-134. 94 refs. ERDA-supported research.

The paper describes the basic properties and state-of-the-art of thin films and coatings in two basic types of solar energy applications: (1) thermal control of structures, requiring reflecting or partially reflecting coatings and antireflection coatings to control incident solar radiation or to retain thermal energy, (2) photothermal conversion, where solar energy is converted to low-grade heat using reflector films, antireflection coatings, and selective solar absorber coatings, (3) photothermal/electrical conversion, where solar energy is concentrated and converted to high-grade heat, and (4) photovoltaic conversion, where solar energy is converted directly into electrical energy by using semiconductor films and junctions, transparent conductors, antireflection coatings, and metal electrode films. Selective solar absorbers described include interference films, Mie scattering films, electrodeposited coatings, and vacuum deposited films. Photovoltaic junction materials characterized include p-n junction photovoltaics, CdS/Cu<sub>2</sub>S cells, polysilicon cells, and Schottky barrier photovoltaics.

**A76-23722** Considerations regarding the feasibility and technology of solar energy satellites and energy transfer satellites (*Betrachtungen zur Durchfuhrbarkeit und Technologie von Sonnenenergie-Satelliten und Energieubertragungs-Satelliten*). Research supported by the Gesellschaft für Weltraumforschung, Contract No GfW-RV11 V67/74-PZ-BB 74. Backnang, West Germany, AEG-Telefunken, 1975. 89 p. In German.

A study conducted for the Minister of Research and Technology of West Germany is presented in an abbreviated form. The study is based partly on an evaluation of already existing data and partly on comprehensive new investigations. Previous studies considered are related to a satellite nuclear power station, orbital solar/thermal power generation, photoelectric solar-energy satellites, and a power relay satellite. Problems concerning an implementation of power satellites are examined and a description of the main components of the investigated systems is presented. Transportation problems related to the establishment of the satellite stations are also discussed along with questions of orbit selection, economic considerations, and the results of studies regarding the feasibility of the considered power systems for Europe.

**A76-24748** Tokamaks (*Les tokamaks*). J-P Poffe *La Recherche*, vol 7, Mar 1976, p 226-235. 15 refs. In French.

Progress in the development of tokamaks is outlined, with special attention given to the apparatus at the Centre d'Etudes Nucleaires at Fontenay-aux-Roses. The plasma current reaches 0.4 MA, the ion temperature, 1.2 keV, and the electron temperature, 2-3 keV. The confinement time of the plasma energy for mean densities of 51 trillion/cu cm is between 0.025 and 0.030 sec. Different means of heating the plasma, including Ohmic heating and injection of high-energy atoms into the plasma, are discussed together with methods of maintaining the plasma temperature. Mechanisms of energy loss from the plasma are described, and safety factors are considered. Current and future research and development programs are discussed, and the specifications of major tokamaks currently in use or in the planning stages are presented.

**A76-24780** Confinement of extragalactic radio sources by massive objects. P S Callahan (Oxford University, Oxford, England) *Royal Astronomical Society, Monthly Notices*, vol 174, Mar 1976, p 587-599. 25 refs.

Models of extragalactic double radio sources are analyzed in which the components are excited and gravitationally contained by a massive object acting on the diffuse cold matter distributed throughout each component. The energy requirements, time scales, and observational constraints for a uniform radio component confined by one or more massive objects are investigated, and nonuniform components are briefly considered. It is found that only models in which the thermal gas and magnetic field are rather

uniform are consistent with observation. Some difficulties with the gravitational-confinement model are discussed, including the energy requirement, the streaming and Rayleigh-Taylor instabilities, and gravitational instability. Several observational tests of the present model are proposed. F G M

**A76-24820** Offshore oil Technology - and emotion K O Emery (Woods Hole Oceanographic Institution, Woods Hole, Mass.) *Technology Review*, vol 78, Feb 1976, p 30-37

Drilling and search techniques used in the exploitation of off-shore oil reserves are discussed. An overview is given of major government policy statements regarding the use of the outer continental shelf for oil production. The risk of detrimental effects on the environment caused by oil spills from off-shore drilling or damage to benthic animals is considered. C K D

**A76-24821** Oil spills and offshore petroleum R J Stewart (MIT, Cambridge, Mass.) *Technology Review*, vol 78, Feb 1976, p 46-59. 7 refs

The number and size of oil spills associated with off-shore production and with tanker transport of imported oil are compared, and the risk of oil spills in off-shore operations utilizing deep-water production technology and improved spill prevention technology is examined. In the past, off-shore production contributed about four times as many spills over 1000 gallons as did importation. A sharp increase in the incidence of spills is noted in oil fields more than 15 years old. The movement of New England, Mid-Atlantic, and Gulf of Alaska oil spills is analyzed. C K D

**A76-24834** The heat pipe - Hot new way to save energy R B Aronson *Machine Design*, vol 48, Mar 11, 1976, p 52-56

Advantages of the heat pipe for a transfer of heat energy include its virtually noiseless passive operation, the absence of maintenance requirements, and cleanness of operation. The heat pipe is used for cooling and for heating applications. It is also employed for objectives of temperature equalization. Factors which have to be considered in connection with the employment of a heat pipe for a certain application are examined, taking into account questions of temperature range and heat load. Attention is given to various types of heat pipes and to recent advances in heat pipe technology. G R

**A76-24943** # Degradation of the characteristics of the thin-film photovoltaic cell Cu/x/S-CdS (Degradatsiia kharakteristik tonkoplennochного fotovol'taicheskogo elementa Cu/x/S-CdS) Kh T Akramov, G Ia Umarov, and T M Razykov (Tashkentskii Gosudarstvennyi Universitet, Tashkent, Uzbek SSR) *Geliotekhnika*, no 6, 1975, p 8-11. 7 refs. In Russian

Results of experimental investigations of the performance of the thin-film heterojunction Cu/x/S-CdS for use in solar cells are reported. The base layer - CdS - was deposited by a gas-transport technique in a flow of H<sub>2</sub> on a molybdenum substrate. The p-layer of copper sulfide was obtained by immersing the CdS layer into an aqueous solution containing positive copper ions. The I-V, C-V, spectral and load characteristics of the thin film specimens, prepared with and without heat treatment, and with an energy conversion efficiency of about 3%, were tested under close to solar radiation conditions in the course of 4000 hours. B J

**A76-24944** # Operation of a thin silicon solar cell with illumination from two sides (Rabota tonkogo kremnievogo fotopreobrazovatelya pri osveshchenii ego s dvukh storon) N M Bordina, T M Golovner, V V Zadde, A K Zaitseva, A P Landsman, and V I Strel'tsova (Vsesoiuznyi Nauchno-Issledovatel'skii Institut Istoknikov Toka, Moscow, USSR) *Geliotekhnika*, no 6, 1975, p 12-19. In Russian

The paper studies the spectral distribution of the collection

coefficient of a silicon solar cell illuminated at different times from the front and back sides. The dependence of the short-circuit current on cell-thickness is calculated during illumination from each of the two sides separately. It is shown that reduction in cell-thickness with the simultaneous elimination of carrier recombination on the back side does not worsen the volt-ampere characteristics of the cell during illumination from the front side and simultaneously increases the short-circuit current and the energy conversion efficiency during illumination from the back side. B J

**A76-24945** # Solar cells from gallium arsenide obtained by ion bombardment (Solnechnye elementy iz arsenida gallia, poluchennyye ionnoi bombardirovkoi) A A Gavrilov, G A Kachurin, and L S Smirnov (Akademiia Nauk SSSR, Institut Fiziki Poluprovodnikov, Novosibirsk, USSR) *Geliotekhnika*, no 6, 1975, p 20-24. 8 refs. In Russian

The characteristics of gallium arsenide solar cells, obtained by the implantation of cadmium and zinc ions into the n-region were studied. During implantation of cadmium ions, increased losses were observed from the cells due to the high layer-resistance of the p-region and to the near-surface recombination of generated carriers. The high recombinational losses are linked to the incomplete annealing of defects and to the small doping depth of the p-n junction. The small doping depth is conditioned by the relatively small diffusion coefficient of the cadmium and the trapping of the additive in the dislocated layer. The implantation of zinc ions led to the increase of the conductivity of the p-layer and to the displacement of the region of the p-n junction further from the irradiated surface due to the high diffusion coefficient. As a result solar cells are obtained with characteristics analogous to those of diffusion junctions and with a high energy conversion efficiency (9.0 to 9.5% without the use of brightening filters). B J

**A76-24948** # Graph-analytical method for the determination of the shape and dimensions of the reflecting surface of a heliostat (Grafo-analiticheskiy metod opredeleniia formy i razmerov otrazhaushchei poverkhnosti geliostata) A V Vartanian, Ia T Shermazanian, and V V Arutunian *Geliotekhnika*, no 6, 1975, p 36-45. 7 refs. In Russian

The paper proposes a graph-analytical method for determining the shape and dimensions of the reflecting surface of a solar-array heliostat for a configuration with an arbitrary optical design and a heliostat on an arbitrary mounting. The heliostat, on an altazimuthal mounting, of a high-temperature solar array with a 10 m diameter collector is considered as an example. B J

**A76-24949** # Collecting capacity of solar-array mirror systems - The effect of geometrical factors (Kontsentrirovushchaya sposobnost' zerkal'nykh sistem SES - Vliianie geometricheskikh faktorov) D I Teplakov and R R Aparisi (Gosudarstvennyi Nauchno-Issledovatel'skii Energeticheskii Institut, Moscow, USSR) *Geliotekhnika*, no 6, 1975, p 46-58. 13 refs. In Russian

The dependence of the collecting capacity of the mirror systems of paraboloid solar arrays on the geometry of the central receiver is investigated. The dependence of the mean collecting capacity of the array on the angular aperture of the collector is plotted for the cases of planar, conical, cylindrical, and spherical receivers. B J

**A76-24950** # Fabrication and investigation of foam-film faceted collectors (Izgotovlenie i issledovanie penoplennoknykh fasetnykh kontsentratorov) O Iu Sobirov, A M Gafurov, S N Vil'kova, and R A Zakhidov (Akademiia Nauk Uzbekskoi SSR, Fiziko-Tekhnicheskii Institut, Tashkent, Uzbek SSR) *Geliotekhnika*, no 6, 1975, p 64-68. In Russian

The paper describes a 3-meter foam-film faceted solar collector consisting of 7 parabolic reflectors each with a diameter of 95 cm, a coverage angle of 34 degrees, and a focal distance of 158 cm. A metallized PTFE film was used in the fabrication of the foam-film facets to be employed as reflecting surfaces. The film was subjected to forming at 170 C which eliminated residual stress and gave it a shape close to paraboloidal. The film was fixed with three layers of

epoxy resin to preserve this shape. A system for tracking the visible image of the sun while rotating about the azimuthal and zenithal axes was used to measure the opto-energetic characteristics of the collector. B.J.

**A76-25120** Application of granular semiconductors to photothermal conversion of solar energy. J. I. Gittleman (RCA Laboratories, Princeton, N.J.) *Applied Physics Letters*, vol 28, Apr 1, 1976, p 370, 371. 14 refs. Contract No. F44620-75-C-0057.

A solar absorber involving dispersion of semiconductor grains in an insulator of low dielectric constant is proposed. A granular semiconductor film is formed by cosputtering a semiconductor and an insulator with which it is immiscible. Such a material is structurally similar to granular metals (dispersion of metal particles in insulators). If the mixing does not reduce the extinction coefficient beyond a tolerance value, the absorbance of the granular semiconductor will be high and its reflectance will be low. Calculations based on Maxwell Garnett theory show that due to its lower reflectivity for wavelengths less than 1.5 microns, the material is about 60% more efficient than silicon in converting solar energy to heat. Results are presented on reflectivity measurements for Ge-Al<sub>2</sub>O<sub>3</sub> films on aluminum. Converter performance approaching the ideal can be obtained provided the discussed materials problems are solved. S.D.

**A76-25224** Gasification gases of coke, coal, benzol, and petroleum and cracking products of natural gas with air-water vapor mixtures (Vergasungs- bzw. Spaltgase von Koks, Kohle, Benzol, Erdöl bzw. Erdgas mit Luft-Wasserdampf-Gemischen). E. Schwarz-Bergkamp (Montanistische Hochschule, Leoben, Austria) *High Temperatures - High Pressures*, vol 7, no 4, 1975, p 457-465. 7 refs. In German.

Because of their importance in research and technology, the equilibrium data for the chemical reactions of gasification of carbonaceous raw materials with mixtures of air and steam are compiled in synoptic diagrams in which hydrogen and carbon monoxide contents are represented as isotherms between 500 and 1000 C. The diagrams allow direct evaluation of the composition with a precision of 0.2%, corresponding to the precision of interpolation between the isotherms and between the data for the selected raw materials. To enable calculation of the contents of CH<sub>4</sub>, CO, H<sub>2</sub>O, and N<sub>2</sub> (as residue) equilibrium constants are tabulated over the quoted temperature range. (Author)

**A76-25391** The conversion of energy in chemical reactions. L. Riekert (Karlsruhe, Universität, Karlsruhe, West Germany) *Energy Conversion*, vol 15, no 3-4, 1976, p 81-84. 10 refs.

Energy conversion and its efficiency in chemical processes can be treated in the same consistent way as energy conversion in power plants or other devices. For this purpose the energy potentially available as shaft work from all material entities entering or leaving a process has to be evaluated. The available energy will always depend on the properties of the environment, the environment being a source or sink of materials in exactly the same sense as it is a source or sink of heat. (Author)

**A76-25392** Becquerel effect solar cell. W. W. Anderson (Lockheed Research Laboratories, Palo Alto, Calif.) and Y. G. Chai (Ohio State University, Columbus, Ohio) *Energy Conversion*, vol 15, no 3-4, 1976, p 85-94. 34 refs. NSF Grant No. AER 74-13292.

The physical processes involved in the conversion of radiant energy to electrical and/or chemical energy in a semiconductor-electrolyte cell are described. These processes are then related to the problem of solar energy conversion and the desirable characteristics of such a cell are defined and potential efficiency of the device is shown to be comparable to that of a p-n junction solar cell. Preliminary measurements on a CdS cell gave 4.6 per cent external conversion efficiency for monochromatic excitation at an incident

power density of 0.4 mW/sq cm. When known internal device loss mechanisms were accounted for, a calculated 25 per cent conversion efficiency at the semiconductor electrode was obtained for the same monochromatic excitation. Electrode corrosion is shown to be the main obstacle to use of the Becquerel photovoltaic effect in a practical energy conversion device. Noncorrosive electrode reactions and charge exchange processes are known and may be of use. (Author)

**A76-25393** Review of candidate batteries for electric vehicles. S. Gross (Boeing Aerospace Co., Seattle, Wash.) *Energy Conversion*, vol 15, no 3-4, 1976, p 95-112. 206 refs.

Short summaries are presented of most of the battery systems that can be considered for electric vehicles. Many little known systems are included, some with little or no experimental background, and thus are worth considering for future research. Electric vehicle battery requirements are postulated, and based on these requirements the battery candidates are evaluated for their near-term and long-term prospects. (Author)

**A76-25394** Flow of fluids through porous, anisotropic, composite media with sources and sinks - Application to fuel cells. S. S. Sareen (Kennecott Copper Corp., Lexington, Mass.) and D. Gidaspo (Institute of Gas Technology, Chicago, Ill.) *Energy Conversion*, vol 15, no 3-4, 1976, p 113-120. 16 refs.

**A76-25396** The performance of electrogasdynamic expanders with slightly conducting walls. D. Wadlow and P. J. Musgrove (Reading, University, Reading, Berks., England) *Energy Conversion*, vol 15, no 3-4, 1976, p 127-135. 7 refs. Science Research Council Grant No. B/SR/9898, Grant No. AF-AFOSR-74-2647.

In electrogasdynamic (EGD) devices the radial movement of charge carriers to insulating duct walls can produce high parasitic electric fields and greatly degrade the overall performance. In principle these parasitic fields may be reduced by constructing the EGD ducts from slightly conducting materials, but there is then a power loss due to current flow through the wall. This paper examines the effect of particle deposition velocity, wall resistivity, load resistance and aspect ratio, as well as fluid friction and gas density, on this resistive wall power loss and on the overall performance of EGD devices. Given suitable and realistic values of the relevant parameters, isentropic efficiencies in excess of 85 per cent are predicted at pressures of the order 10-40 atmospheres. (Author)

**A76-25398** Design and performance of a turbine suitable for an aerogenerator. O. Igra *Energy Conversion*, vol 15, no 3-4, 1976, p 143-151. 17 refs.

As a part of a large project aimed at finding the optimal configuration for an aerogenerator to exploit wind power, an investigation was launched to find a simple and reliable way to design a turbine to operate in a shrouded aerogenerator. To check the reliability of the proposed model for the turbine design, two turbines were built and tested. The tests covered a wide range of inlet and angular velocities and were conducted for several numbers of blades. The results of these tests clearly demonstrate that the proposed design scheme can be used with confidence for the design of a turbine that is intended to work inside an aerogenerator shroud. **A76-25536 #** Introduction of an ionizable additive in the form of an aqueous solution of K<sub>2</sub>CO<sub>3</sub> of high temperature and concentration (Vvod ioniziruushchiesia prisadki v vide vodnogo rastvora K<sub>2</sub>CO<sub>3</sub> vysokoi temperatury i kontsentratsii). M. A. Styrikovich, A. V. Zagorodnikh, V. E. Kartun, I. L. Mostinskiy, R. S. Nekhoroshev, V. R. Pesochin, E. G. Smirnova, and V. I. Stepanov (Akademiya Nauk SSSR, Nauchno-Issledovatel'skii Institut Vysokikh Temperatur, Moscow, USSR) *Teplofizika Vysokikh Temperatur*, vol 13, Nov-Dec 1975, p 1261-1266. 5 refs. In Russian.

The advantages and shortcomings of introducing an additive in the form of aqueous solutions of  $K_2CO_3$  of 50 and 75% concentration into the combustion chamber of an open-cycle MHD facility are discussed. A system is proposed for producing and introducing an aqueous solution of  $K_2CO_3$  with a concentration of 73 plus or minus 1 at % at 360 C into the combustion chamber of a MHD facility of the type U-02. Other concentrations considered are 50 at % at 20 C and 50 at % at 270 C. The solutions are atomized in the combustion chamber by means of a pneumatic injector with a nozzle diameter of 0.5 mm. Experimental results are presented regarding measurement of the conductance of combustion products along the length of the combustion chamber, its dependence on temperature, pressure, and concentration of the solution introduced. The limits of normal regimes for the operation of the evaporator are determined. S D

**A76-25613**      **Transportation energy conservation policies**  
E Hirst (Oak Ridge National Laboratory, Oak Ridge, Tenn.) *Science*, vol 192, Apr 2, 1976, p 15-20. 19 refs

Using models based on energy consumption data for the 1960s, the energy savings for 1980 and 1985 as the result of four possible transportation policies are estimated. The analysis indicates that policies directly affecting automobile ownership and use (fuel economy standards and increased gasoline taxes) are shown to be much more effective than policies designed to increase the use of energy-efficient means of transportation (carpools and mass transit). The energy efficiencies of different urban and intercity transit systems are evaluated. C K D

**A76-25790 #**      **Cycle analysis of air-storage power plants.** K W. Li and N R. Duckwitz (North Dakota State University, Fargo, N Dak.) *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar 21-25, 1976, Paper 76-GT-41* 9 p. 9 refs. Members, \$1 50, nonmembers, \$3 00

Underground air storage and gas turbines are combined to form an air-storage power plant for peak power generation. This generating system will lower the peak power generation cost at the time when the fuel price is high. The paper is intended to present thermodynamic analysis of various cycle arrangements. The air storage is of constant pressure type. In the paper, the parameters affecting the system performance characteristics are identified and studied. Also included are the effects of intercoolers and recuperators. The storage volume is predicted in terms of unit peaking power production.

**A76-25850 #**      **Modern gas turbines for low Btu gas fuel operation.** R J Palmer and M R Burgess (Turbodyne Corp., St Cloud, Minn.) *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, New Orleans, La., Mar 21-25, 1976, Paper 76-GT-117* 7 p. Members, \$1 50, nonmembers, \$3 00

A brief review of gas-turbine experience in operation on low-Btu gas is presented. The applicability of this experience to combustion technology associated with current generation turbines is discussed. The integration of a currently available turbine design into possible synthetic fuel systems is presented as an available alternative in generation-system planning. (Author)

**A76-25929**      **A net energy analysis of the use of Northern Great Plains surface mined coal in load center power plants.** T Ballentine (Florida, University, Gainesville, Fla.) In *International Conference on Environmental Sensing and Assessment*, Las Vegas, Nev., September 14-19, 1975, Proceedings Volume 1

New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p 1 17-1 to 7 17-1. 15 refs

A net energy systems analysis is performed with the aid of energy systems diagrams to obtain an objective appraisal of the utility of surface-mined coal from the Northern Great Plains as an energy source for the United States. The theory and methodology of

energy systems analysis are described with emphasis on energy quality, the proper use of energy, and constraints imposed on coal developments in the Northern Great Plains, particularly inflation. The net energy ratio associated with the use of this coal for electrical-power generation at load centers is determined. It is concluded that (1) the present coal may become rapidly uncompetitive both energetically and economically with increasing distance of the load center from the mines, (2) one-third of the energy costs involved in mining and delivering the raw coal is represented by the diesel fuel required for these operations, and (3) the net energy ratio associated with bulk electricity at a load-center coal-fired power plant is 866 units of yield per unit of energy investment, as compared with a ratio of 30.1 for imported oil prior to 1973. **A76-25934**      **Power vs. pollution - A numerical approach.** H I Zelig and M Funk (Harold I Zelig Chemical and Environmental Consultants, Spring Valley, N Y.) In *International Conference on Environmental Sensing and Assessment*, Las Vegas, Nev., September 14-19, 1975, Proceedings Volume 1  
New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p 1 17-6 to 3 17-6. 11 refs

A technique is proposed for the quantitative determination of the extent of environmental pollution resulting from the inefficiencies of different energy-transformation processes. In applying this technique, the amount of pollution energy is expressed by a pollution coefficient, defined as the total energy transformed less the useful energy. Pollution coefficients are calculated for petroleum combustion in an internal combustion engine, coal combustion in a steam-turbine electrical generator, and electrical-power generation by nuclear fission and nuclear fusion. The results obtained - 0.89, 0.82, 0.71, and 0.91, respectively - show that nuclear fission produces the least amount of pollution energy (71% of the energy transformed). Noting that even this low level will still lead to dangerous pollution of the environment, it is concluded that the only long-term solution to the world's energy-pollution problem is the use of solar energy.

**A76-26007**      **Future energy development and related environmental monitoring.** S J Gage and G J D'Alessio (U.S. Environmental Protection Agency, Office of Energy Minerals and Industry, Washington, D C.) In *International Conference on Environmental Sensing and Assessment*, Las Vegas, Nev., September 14-19, 1975, Proceedings Volume 2  
New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p 5 PIII-10. PIII

In response to national problems brought about by the energy crisis a report was submitted to the President of the U.S. in December 1973. The report emphasized the need for an environmental assessment of new energy technologies. The report identified also objectives related to environmental monitoring and to associated monitoring methods. In connection with the resulting environmental research and development program, it is the objective of the Western

Energy/Environment Monitoring Study to provide current baseline information on air, water, and land quality in the Western U.S. Questions concerning the planning and the implementation of the monitoring study are discussed and attention is given to future energy-related monitoring needs. G R

**A76-26047 #** Problems of the environment, energy, and natural resources: The international aspect (*Problemy okruzhayushchei sredy, energii i prirodnkh resursov. Mezhdunarodnyy aspekt*). K V Ananichev. Moscow, Izdatel'stvo Progress, 1975. 168 p. 230 refs. In Russian.

The nature and extent of the environmental crisis is examined. The environmental impact of urbanization and cultivation of large areas of land is considered. The distribution of fuel and mineral resources is analyzed. A comparative study is made of environmental problems confronting the U.S.S.R. and the U.S.A. Current programs of international cooperation on environmental issues are described, and specific targets for further collaborative efforts are discussed.

**A76-26067** Optical methods in energy conversion; Proceedings of the Seminar, Rochester, N.Y., June 23-25, 1975. Seminar sponsored by the Society of Photo-Optical Instrumentation Engineers. Edited by M. Lubin. Palos Verdes Estates, Calif., Society of Photo-Optical Instrumentation Engineers (SPIE Proceedings Volume 61), 1975. 128 p. \$32.

Prospects for fossil, fission, and fusion power production in connection with the energy problem are considered along with optical focusing criteria for laser fusion, tunable lasers for isotope separation, optical diagnostics of combustion processes, fast X-ray shutters, and laser systems for high peak-power applications. Attention is also given to neodymium glass lasers, design criteria for high power laser systems, the magnetic enhancement of laser amplifier energy storage capability, pulsed HF laser oscillator-amplifier experiments, and the focusing optics for high peak-power laser fusion systems.

G R

**A76-26068** The energy problem - Prospects for fossil, fission, and fusion power production. L. M. Goldman (Rochester, University, Rochester, N.Y.). In: Optical methods in energy conversion, Proceedings of the Seminar, Rochester, N.Y., June 23-25, 1975. Palos Verdes Estates, Calif., Society of Photo-Optical Instrumentation Engineers, 1975, p. 2-8. 6 refs.

An investigation is conducted concerning the approaches which can be used to satisfy the future energy requirements of the U.S. The exhaustion of petroleum and gas supplies makes it necessary to replace these fuels. The approaches considered include an increased use of coal. An employment of shale oil is still somewhat problematical because of costs and environmental considerations. A solution of the energy problem by the utilization of nuclear fission depends partly upon the willingness to accept certain risks. A successful breeder reactor system would not be fuel limited for many hundreds of years. The feasibility of controlled nuclear fusion has still to be demonstrated. There are also a number of difficulties regarding the use of solar energy.

G R

**A76-26069** Some basic energy and economic considerations for a laser ignited fusion reactor. R. E. Kinsinger (Rochester, University, Rochester, GE Research and Development Center, Schenectady, N.Y.) and E. B. Goldman (Rochester, University, Rochester, N.Y.). In: Optical methods in energy conversion, Proceedings of the Seminar, Rochester, N.Y., June 23-25, 1975.

Palos Verdes Estates, Calif., Society of Photo-Optical Instrumentation Engineers, 1975, p. 16-24. 15 refs.

An investigation is conducted regarding the energy gain from thermonuclear fusion reactions in a properly prepared plasma sphere.

A reactor energy balance is also studied. It is concluded that the applicability of current published compression schemes for homogeneous targets to central station power production appears doubtful. Economic factors are also examined. A reduction of over three orders of magnitude in laser system cost appears necessary for an economic laser-fusion central station power plant. The prospects of laser induced fusion could possibly be enhanced by an employment of fission-fusion hybrid schemes or the use of more sophisticated target designs. G R

**A76-26071** Optical diagnostics of combustion processes. M. Lapp (General Electric Co., Schenectady, N.Y.). In: Optical methods in energy conversion, Proceedings of the Seminar, Rochester, N.Y., June 23-25, 1975. Palos Verdes Estates, Calif., Society of Photo-Optical Instrumentation Engineers, 1975, p. 42-50. 22 refs.

New measurement techniques for the study of combustion processes are currently receiving widespread attention because of their potential utility for combustion modeling. Such modeling promises to offer many benefits for the design of advanced power sources with high efficiency and low pollutant emissions. Here, we very briefly discuss several classes of optical methods for the measurement of combustion system properties. We then describe in more detail the measurement of temperature, density, and composition by Raman scattering, and velocity by laser Doppler velocimetry, as examples of nonperturbing optical diagnostic probes currently under development for combustion measurements purposes. **A76-26074** Neodymium glass lasers - A status report. J. M. McMahon (U.S. Navy, Naval Research Laboratory, Washington, D.C.). In: Optical methods in energy conversion, Proceedings of the Seminar, Rochester, N.Y., June 23-25, 1975. Palos Verdes Estates, Calif., Society of Photo-Optical Instrumentation Engineers, 1975, p. 64-67. 10 refs. ERDA-supported research.

Attention is given to aspects of power amplification, energy storage/gain considerations, and power density limitations. The most fundamental limit to pulse intensity is related to the avalanche ionization of any material in the beam. Difficulties concerning the self-focusing effect, however, have limited achievable intensities to the range from 1 to 10 GW per sq cm. Investigations concerned with an enhancement of pulse intensity are discussed. It appears that the ultimate limit for neodymium glass lasers would be in the range from 5 to 10 TW per beam at overall efficiencies of the order of 0.1%.

In: Optical methods in energy conversion, Proceedings of the Seminar, Rochester, N.Y., June 23-25, 1975.

Palos Verdes Estates, Calif., Society of Photo-Optical Instrumentation Engineers, 1975, p. 73-80. 7 refs.

This paper describes an experimental and theoretical investigation of the efficacy of an axial inhomogeneous magnetic field in increasing the ratio of stored energy to peak small signal amplification in a laser system based on the  $2P_{1/2}$ - $2P_{3/2}$  atomic iodine transition. The experiments were conducted with a photo-dissociative C3F7I-iodine laser oscillator placed in the fringing field of a solenoid. By studying the variation with magnetic field of the time-integrated dissociative flux at the onset of lasing, energy storage enhancements up to 15 (at a peak field of 20 kilogauss) were inferred. The results are compared with theoretical calculations of the phenomena which include the hyperfine structure of the transition. The dynamic behavior and extraction efficiency of a master oscillator/power amplifier configuration utilizing this technique for increasing the maximum obtainable output energy per pulse are also discussed. **A76-26143** The shallow solar pond energy conversion system W C Dickinson, A F Clark, J A Day, and L F Wouters (California, University, Livermore, Calif.) (*International Solar Energy Society, Annual Meeting, Fort Collins, Colo., Aug 21-23, 1974*) *Solar Energy*, vol 18, no 1, 1976, p 3-10 8 refs ERDA-sponsored research

The concept of a shallow solar pond energy conversion system is presented as an effective way to produce large-scale electric power from solar energy. Water is used both for heat collection and heat storage. Inexpensive layers of weatherable transparent plastic over the water suppress heat loss to the environment. The hot water is stored in an insulated reservoir at night. The stored hot water heats a thermodynamic fluid, probably Freon 11, which drives a turbine and an electric generator. A 10 MWe plant built in the southwest would require a total area of about 2 sq km and could provide power for a community or a manufacturing process. The estimated busbar cost of electricity for a shallow solar pond system is 56 mills/kWh. This cost could be reduced with the development of improved and cheaper plastics and more efficient turbines. Another potentially important use of shallow solar ponds is to provide process hot water, up to the boiling point, for industrial and commercial purposes. Also, a shallow solar pond could provide hot water for the space heating, air conditioning and hot water needs of a community of homes.

**A76-26144** The effect of heat loss on solar heating systems R T Nash and J W Williamson (Vanderbilt University, Nashville, Tenn.) (*International Solar Energy Society, Annual Meeting, Fort Collins, Colo., Aug 21-23, 1974*) *Solar Energy*, vol 18, no 1, 1976, p 11-20 14 refs

The effect of structural heat losses on the performance of a solar heating system is examined from the technical and economic points of view. A pictorial method is used to visualize the relationships between the dominant physical factors: the structural heat loss coefficient, the collecting area of the solar collector, the incident solar flux and the external temperature. The economic factors which contribute to the total cost of heating a dwelling are discussed. A method for identifying cost effective combinations of solar energy gain, structural energy loss and thermal energy storage is developed. The requirements for residential heating throughout the United States are considered.

**A76-26146** Solar thermal power system based on optical transmission L L Vant Hull and A F Hildebrandt (Houston, University, Houston, Tex.) (*International Solar Energy Society, Annual Meeting, Fort Collins, Colo., Aug 21-23, 1974*) *Solar Energy*, vol 18, no 1, 1976, p 31-39 15 refs NSF-supported research

In the solar tower concept, a multiplicity of mass produced heliostats reflect sunlight to an elevated central receiver where it is absorbed as heat and transported to the ground. This paper presents the results of an NSF/RANN funded study of the technical and economic feasibility of this approach for powering a 10-500 MW electrical generator. A computer model of the collector system is described and results illustrative of the high performance of the system are presented. Detailed heliostat design studies have shown a silvered float glass mirror supported on a welded steel grid and guided in elevation and azimuth by a receiver oriented optical sensor and feedback circuit can be mass produced economically. Conceptual designs of the tower and receiver show them to be a minor cost component. With careful attention to thermal cycle fatigue, the receiver will present only a minor technical risk. The cost of electricity in the intermediate load range is competitive with the upper range of fossil fuel costs.

**A76-26147** Solar space heating at high altitude conditions J P Gupta and R K Chopra (Defence Laboratory, Jodhpur, India) *Solar Energy*, vol 18, no 1, 1976, p 51-57 15 refs

Results of field trials on a solar space heating device at an altitude of 3.5 km and under sub-zero ambient conditions, down to

-17 C are presented. The equipment does not require auxiliary power. It is based on automatic thermosiphon circulation of anti-freeze solution and subsequent radiant heating of living space. The equipment has been tried on a living room of dimensions 3.75 x 2.40 x 2.40 m and results are compared with those for kerosene and electrically-heated control rooms. A solar collector area of 6.5 sq m provides heat equivalent to 17 kWh of electricity or 7 liters of kerosene per day. Apart from economic advantage the device avoids air pollution and fire hazards.

**A76-26150** New potentialities for international co-operation in the field of solar energy and its applications B H Chatel (United Nations, Office for Science and Technology, New York, N.Y.) (*International Solar Energy Society, Annual Meeting, Fort Collins, Colo., Aug 21-23, 1974*) *Solar Energy*, vol 18, no 1, 1976, p 69-71

The paper reviews the role of United Nations' agencies in the field of solar energy. Developments in the period 1950-1970 are touched upon, with particular attention paid to the 'arid zones' program sponsored by UNESCO and the international conference in Rome in 1961 on solar, wind and geothermal energy. The educational, research, information-dissemination, and technical assistance activities of UNESCO in the field of solar energy in the 1970s are discussed, with emphasis on the international conference 'Sun in the Service of Mankind' in Paris in 1973. The role of the United Nations Environment Program (UNEP) and that of the Advisory Committee on the Application of Science and Technology to Development (ACAST) are considered. Research and development topics are classified in six categories: improvement of small solar devices, heating and cooling of buildings, production of bulk electric power, solar energy biological conversion, water storage of solar energy and space applications.

**A76-26151** Energy-storage requirements reduced in coupled wind-solar generating systems J W Andrews (Long Island University, Southampton, N.Y.) *Solar Energy*, vol 18, no 1, 1976, p 73, 74

A Monte Carlo computer model has simulated the operation of a system of combined solar and wind powered generators, using varying proportions of wind and solar power on different runs, to test whether the combination of the generators would result in a reduction in the needed capacity for energy storage. The basic data which results from each year's run of the model is the minimum energy-storage capacity needed to meet demand at all times during the year's operation. This will vary from run to run since random changes in sunlight intensity and wind velocity due to changes in the weather are superimposed on the diurnal and annual variations caused by the rotation and orbital motion of the earth.

**A76-26498** Net energy analysis - An economic assessment D A Huettnner (Oklahoma, University, Norman, Okla.) *Science*, vol 192, Apr 9, 1976, p 101-104 20 refs

The assumptions and concepts of net energy analysis are outlined, and the conclusions drawn from net energy analyses are compared with those obtained by economic analysis. Net energy is defined as the amount of energy remaining for consumer use after the energy costs of finding, producing, upgrading, and delivering the energy have been paid. All inputs have an energy measure to account for their total value. When a resource is exhausted, the energy required to synthesize a substitute is included. It is shown that economic analysis and net energy analysis yield identical results if inputs are priced according to their energy content alone, however, the assumption that energy is the ultimate limiting factor would lead to distortions in the allocations of income, investments, and natural resources if net energy analysis were used on a long-term basis. The possibility of the development or discovery of new, quasi-inexhaustible energy sources also undermines the utility of net energy analysis.

**A76-26645** The thermo-mechanical generator E Cooke-Yarborough, E Franklin, J Geisow, R Howlett, and C West (Atomic Energy Research Establishment, Electronics and Applied Physics Div, Harwell, Berks, England) In Power sources 5, Research and development in non-mechanical electrical power sources, Proceedings of the Ninth International Symposium, Brighton, Sussex, England, September 17-19, 1974.

London, Academic Press, Inc (London), Ltd, 1975, p 643-648, Discussion, p 648, 649 8 refs

Research work on thermomechanical generators based on the Stirling engine is briefly summarized. One propane-heated engine is mentioned which on a 3-day fuel consumption run consumed 22 g of fuel per hour and delivered 31 75 W ac continuously, corresponding to an overall efficiency of 10%. Such a machine would require less than a quarter of the fuel required by a typical propane-heated thermoelectric generator delivering the same power. Another machine was equipped with a nuclear radiation shield to make it suitable for heating with a strontium 90 radio-isotope heat source. Tests with the shield electrically heated show that with 180 W thermal in the radiation shield, 18 W ac at 80 Hz can be obtained at the output of the alternator. Consequently, it could be expected to obtain twice as much electrical power from a given radio isotope source as from the same source incorporated in a thermoelectric generator.

The current status of development of aircraft engines is examined, taking into account a search for new fuels, economic demands for aircraft engines, the development of new engines with

more favorable environmental characteristics, plans for the development of an acceptable engine for supersonic aircraft, and general studies concerned with the enhancement of the operational efficiency of the engine. Attention is given to current and future jet engines, turbine engines for helicopters, piston engines, and ramjet engines. G R

**A76-26689 Tungsten trioxide as a photoanode for a photoelectrochemical cell /PEC/** G Hodes, D Cahen, and J Manassen (Weizmann Institute of Science, Rehovot, Israel) *Nature*, vol 260, Mar 25, 1976, p 312, 313

The paper addresses the problem of finding a semiconductor electrode for a PEC with an optical band gap small enough to allow it to absorb a reasonably large portion of the solar spectrum, at the same time being stable to photocorrosion. It is shown that WO<sub>3</sub> meets these requirements although it is not very efficient at solar wavelengths. WO<sub>3</sub> electrodes were prepared either by heating tungsten to form a layer of yellow WO<sub>3</sub>, or by spraying ammonium tungstate on conducting glass and heating at 500 C to decompose the tungstate. Volt-ampere curves are plotted for a WO<sub>3</sub> photoanode in the dark and in illumination approximating sunlight. The spectral response of the photocurrent of a WO<sub>3</sub> electrode on conducting glass is compared with that of polycrystalline TiO<sub>2</sub> (up to now the only photoanode material). B J

**A76-26703 Solar energy collection using beam waveguides.** J C Daly (National Institute for Higher Education, Limerick, Ireland) *Applied Optics*, vol 15, Apr 1976, p 855, 856 7 refs

Beam waveguides can be used for the transmission of large quantities of solar energy for use in thermal processes. Mirror reflectivities limit solar energy propagation over waveguides to about 10 km. High energy collimated beams can be produced by an array of sun-tracking heliostats and an array of smaller mirrors mounted on a tower. Calculations indicate that collimated solar beams 10 m in diameter and carrying 4.8 MW are feasible. C K D

**A76-26719 Transparent heat mirrors for solar-energy applications** J C C Fan and F J Bachner (MIT, Lexington, Mass.) *Applied Optics*, vol 15, Apr 1976, p 1012-1017 8 refs USAF-sponsored research

Transparent heat-mirror films, which transmit solar radiation but reflect IR thermal radiation, have potentially important applications in solar/thermal/electric conversion, solar heating, solar photovoltaic conversion, and window insulation. RF sputtering was used to prepare two types of films: TiO<sub>2</sub>/Ag/TiO<sub>2</sub> and Sn-doped In<sub>2</sub>O<sub>3</sub>. To characterize the properties of heat-mirror films for solar energy collection, two parameters are defined: the effective solar absorptivity and the effective IR emissivity. For the Sn-doped In<sub>2</sub>O<sub>3</sub> films, the ratio of the effective values is comparable to the ratio of the values reported for the leading selective absorbers. Even higher values of the effective ratio are obtained for the TiO<sub>2</sub>/Ag/TiO<sub>2</sub> films. (Author)

**A76-26846 # Liquefied natural gas, in France and throughout the world (Le gaz naturel liquéfié, en France et dans le monde)** P Asselineau (Gaz de France, Paris, France) *Palais de la Découverte, Revue*, vol 4, Apr 1976, p 27-44. In French

The thermodynamic and physical properties of liquefied natural gas, consisting primarily of methane, are outlined. The processes involved in liquefaction, storage, transport, and regasification are discussed. Capacities and locations of major production plants and their terminals are summarized, and experimental programs investigating the use of liquefied natural gas as fuel for internal combustion engines are described. **A76-27125 Coal conversion technology** I Howard Smith and G J Werner (Millmerran Coal Pty., Ltd., Brisbane, Australia) Park Ridge, N.J., Noyes Data Corp. (Chemical Technology Review, No 66), 1976 153 p 155 refs \$24

Coal conversion processes for the production of solid, liquid, and gaseous products are considered, taking into account catalytic coal liquefaction, the clean coke process, the extractive-coking process, the Fischer-Tropsch synthesis, Garrett's coal pyrolysis, gas extraction, the hydro-cracking process, and intermediate hydro-gasification. High BTU coal gasification processes are discussed and a description is given of low and medium BTU coal gasification processes. Attention is given to the air products recycle process, electric arc gasification, electrofluidic gasification, liquid phase methanation, and two-state fluidized gasification. G R

**A76-27132 Characteristics of a water absorber in front of a silicon solar cell** T I Chappell and R M White (California, University, Berkeley, Calif.) *Applied Physics Letters*, vol 28, Apr 15, 1976, p 422, 423 13 refs NSF Grant No. ENG 73-08300A01

In a system for converting sunlight to both electric power and heat, a selective absorber between the sun and a semiconductor solar cell may provide a substantial thermal output without seriously reducing the electrical output. Calculations for water in front of a typical silicon solar cell show, for example, that a water layer 1-cm thick absorbs 16.3% of the incident energy (chiefly photons having energies below the energy gap of silicon), while reducing the electric power output only from 13.8% to 13.1%. Experimental results confirm this finding. (Author)

**A76-27136 Thin-film conducting microgrids as transparent heat mirrors** J C C Fan, F J Bachner, and R A Murphy (MIT, Lexington, Mass.) *Applied Physics Letters*, vol 28, Apr 15, 1976, p 440-442 9 refs USAF-sponsored research

A transparent heat mirror for solar-energy applications has been fabricated by chemically etching a Sn-doped In<sub>2</sub>O<sub>3</sub> film to form a transparent conducting microgrid. For square openings 2.5 microns on a side, separated by lines 0.6 micron wide, the solar transmission increases from 0.8 for the original continuous film to 0.9 for the microgrid. Although 65% of the area of the film is removed by etching, the infrared reflectivity decreases by only 9%, from 0.91 to 0.83. A smaller decrease in infrared reflectivity may be possible if materials with higher optical conductivity are used. (Author)

**A76-27145 Solar absorptance and emittance properties of several solar coatings** R B Petit and R R Sowell (Sandia

Laboratories, Albuquerque, N Mex ) *Journal of Vacuum Science and Technology*, vol 13, Mar Apr 1976, p 596-602 26 refs ERDA-supported research

Solar absorptance (as) and total hemispherical emittance (t h e.) properties of two potential solar selective coating systems are reported The first coating system studied is a semiconductor-pigmented paint which consists of a high-temperature silicone binder mixed with small particles of Ge, Si, or PbS Although most of the paints have as values above 0.90, all have high t h e values due to the high emittance of the silicone binder The second system studied is electroplated films of 'black nickel' and a proprietary 'black chrome' Increasing the plating time initially increases both as and t h e, however, for long plating times, there is no improvement in as, while t h e continues to increase By increasing the surface roughness of nickel-plated substrates, the solar absorptance can be increased while maintaining approximately the same total hemispherical emittance The coatings show minor decreases in solar absorptance at angles of incidence up to 75 deg from normal (Author)

**A76-27971** Effect of national transportation/energy policy on regional transportation phenomena J E Flory, M A

Pearce, P. J. Hunter, and N. J. Mosman (California, University, Davis, Calif.) *Simulation*, vol. 26, Apr. 1976, p. 105-110. 50 refs. NSF Grant No. GI-27.

Most regional transportation modeling studies have focused on microlevel phenomena operating within the region. In contrast, the model presented in this paper utilizes a hierarchical causality approach to examine the impact of higher level (i.e., national) policies on macrolevel regional transportation characteristics. Specifically, the individual and joint effects of national trends in gasoline price, transit funding, and fuel economy of automobiles are examined with respect to their influence on two Sacramento regional variables: transit usage and transportation fuel consumption. The authors conclude that given the uncertain future of causal forces that are beyond the region's control (e.g., gasoline price), a macrolevel analysis may be a more judicious use of limited transportation planning resources. (Author)

**A76-28028 \* # Photovoltaic Test and Demonstration Project.** A. F. Forestieri, H. W. Brandhorst, Jr., and J. N. Deyo (NASA, Lewis Research Center, Cleveland, Ohio). *Centre National d'Etudes Spatiales and Centre National de la Recherche Scientifique, International Conference on Solar Electricity, Toulouse, France, Mar. 1-5, 1976, Paper 5 p.*

The Photovoltaic Test and Demonstration Project was initiated by NASA in June, 1975, to develop economically feasible photovoltaic power systems suitable for a variety of terrestrial applications. Objectives include the determination of operating characteristic and lifetimes of a variety of solar cell systems and components and development of methodology and techniques for accurate measurements of solar cell and array performance and diagnostic measurements for solar power systems. Initial work will be concerned with residential applications, with testing of the first prototype system scheduled for June, 1976. An outdoor 10 kW array for testing solar power systems is under construction. C. K. D.

**A76-28226 Advanced wind energy systems, Proceedings of the Workshop, Stockholm, Sweden, August 29, 30, 1974. Volumes 1 & 2.** Workshop sponsored by the Styrelsen for Teknisk Utveckling and Swedish State Power Board. Edited by O. Ljungstrom (Styrelsen for Teknisk Utveckling, Stockholm, Sweden). Stockholm, Styrelsen for Teknisk Utveckling, 1976. Vol. 1, 220 p., vol. 2, 216 p.

A review of important past developments in the field of wind energy systems is presented. Advanced horizontal axis rotor concepts for wind machines are studied in detail together with advanced vertical axis rotor concepts. Wind energy conversion and storage are discussed with consideration of storage via electrolysis using high pressure hydrogen, pumped hydro-storage, air storage concepts and the use of synchronous flux generators and dc generator/thyristor converter in wind power systems. The economics of wind power is considered as are international research and development programs concerning wind power. B. J.

**A76-28227 # French contribution to wind power development - By EDF 1958-1966.** R. Bonnefille (Electricite de France, Chatou, Yvelines, France). In *Advanced wind energy systems, Proceedings of the Workshop, Stockholm, Sweden, August 29, 30, 1974. Volume 1.* Stockholm, Styrelsen for Teknisk Utveckling, 1976, p. 1-17 to 1-22.

**A76-28228 # Review of the UK wind power programme 1948-1960.** A. H. Stodhart (Electrical Research Association, Leatherhead, Surrey, England). In *Advanced wind energy systems, Proceedings of the Workshop, Stockholm, Sweden, August 29, 30, 1974. Volume 1.* Stockholm, Styrelsen for Teknisk Utveckling, 1976, p. 1-23 to 1-34. 21 refs.

The UK wind power program consisted of three parts: (1) the wind survey and site selection program covering over 100 different sites in the UK and including suitable instrumentation for wind survey purposes, (2) the development of prototype machines, and (3)

the establishment of testing programs for these machines. Photographs are presented of five windpowered generators: the 10 kW prototype installed at Cranfield, the 25 kW machine on the Isle of Man, and three 100 kW machines on Costa Hill, at St. Albans and on the Isle of Man. An appendix is included providing a list of Electrical Research Association published reports on wind power generation. B. J.

**A76-28229 # Review of development in West-Germany.** U. Hutter (Stuttgart, Universität, Stuttgart, West Germany). In *Advanced wind energy systems, Proceedings of the Workshop, Stockholm, Sweden, August 29, 30, 1974. Volume 1.* Stockholm, Styrelsen for Teknisk Utveckling, 1976, p. 1-51 to 1-72. 6 refs.

The paper reviews work done in the field of windpowered generators in Germany from the 1920s through the 1950s. Examples are taken from work done by Hermann Honnef, by the Ventimotor GmbH in Weimar and the Allgaier Werke in Udingen. In 1931 and 1932 Honnef published the results of his studies on the outlay of a multirotor windpowered generator system with a total rated power of almost 60 megawatts. The height of the tower was 250 m and it was planned to support three individual rotor systems of 160 m each. The system was a gearless one using large ring generators. The Ventimotor GmbH project in the 1940s consisted of a 50 kW ac unit with a rotor diameter of 18 m, a rotor rated speed of 4.5 m/s and an elevation of the rotor axis of 22 m above the ground. In the early 1950s Allgaier-Werke developed a standard unit with a pitch controlled 3- and later a 2-blade high tip speed ratio rotor. The machine, including in one block rotor hub, gear, generator and an automatic positioning system was adjusted to a tubular tower. B. J.

**A76-28230 # Optimum design concept for windelectric converters.** U. Hutter (Stuttgart, Universität, Stuttgart, West Germany). In *Advanced wind energy systems, Proceedings of the Workshop, Stockholm, Sweden, August 29, 30, 1974. Volume 1.* Stockholm, Styrelsen for Teknisk Utveckling, 1976, p. 2-3 to 2-23. 6 refs.

The optimal design criteria of windpowered generators relate to four parameter groups: (1) the outlay of the rotor blades, (2) the correlation of the rated power output, the magnitude of the disk area swept by the rotor and wind velocity statistics, (3) the parameters of energy conversion, and (4) the absolute values of the magnitude of individual units and the relative magnitude of system components such as tower height in relation to rotor diameter. Graphs are plotted for the optimal lift/drag ratio of rotor airfoils and for the optimal power coefficients versus rotor blade tip speed. The effect of power disk load on energy quality is calculated. B. J.

**A76-28231 # The NOAH wind energy concept.** W. Schonball. In *Advanced wind energy systems, Proceedings of the Workshop, Stockholm, Sweden, August 29, 30, 1974. Volume 1.* Stockholm, Styrelsen for Teknisk Utveckling, 1976, p. 2-25 to 2-30.

The NOAH wind rotor system (a 70 kW double-rotor wind generator concept) is described. The system consists of the following: two contra-rotating propellers each with 5 blades of fixed pitch (the generator is integrated with the propeller system), a multipole generator without power transmitting couplings and with the field and the poles directly connected to the propellers, with the EM field of the generator used as a braking system, an electronic regulating system controlling the rotor speed and modulating the power output to ac or dc as necessary, a wind-operated directional system which keeps the main rotor head in the wind and which is also used as a security device to turn the main rotors away from the wind when speeds exceed the rated maximum. B. J.

**A76-28232 # Aerodynamic design of horizontal axis wind generators.** O. Holme (Saab Scania AB, Linköping, Sweden). In *Advanced wind energy systems, Proceedings of the Workshop, Stockholm, Sweden, August 29, 30, 1974. Volume 1.* Stockholm, Styrelsen for Teknisk Utveckling, 1976, p. 2-31 to 2-35.

A blade element vortex theory taking account of the finite number of blades (a propeller theory) is used to perform the aerodynamic design of windpowered generators and to calculate their aerodynamic loads and performance. A complete system of equations for the torque and drag coefficient of the blade element of a windmill at a given pitch angle and speed ratio is calculated on the basis of velocity, force and geometrical relations for the blade element. Corresponding coefficients for the complete windmill are obtained by integrating over the blade radius and the method is extended to cover the effects of wind shear, oblique flow and pitch and yaw oscillations. The maximum power coefficient at a given speed ratio and a given number of blades is used as a windmill optimization criterion. B J

**A76-28233 #** Some marketing and technical considerations of wind power. P B S Lissaman (AeroVironment, Inc., Pasadena, Calif.) In Advanced wind energy systems, Proceedings of the Workshop, Stockholm, Sweden, August 29, 30, 1974. Volume 1. Stockholm, Styrelsen for Teknisk Utveckling, 1976, p 2 37, 2 39 to 2-58. 7 refs.

A brief review of the wind power market situation is given. Three viable windmill classes are identified, in the power ranges of 0.1, 1, and 1,000 kW. Judging by the public response, and some very preliminary market surveys, the demand for the two smaller units appears attractive for private venture capital. Some common characteristics of potential purchasers for the 1 to 5 kW systems are identified. A basic aerodynamic performance analysis for the crosswind type rotor is outlined, showing that it is intrinsically less efficient aerodynamically than the wind axis (propeller) rotor. A greatly simplified structural comparison is made, also showing the crosswind type to be comparable but slightly less efficient structurally than the propeller type. It is stressed that this tentative conclusion is based on an incomplete technical analysis and ignores other considerations, such as total cost or esthetics. (Author)

**A76-28234 \* #** Structural analysis of wind turbine rotors for NSF-NASA Mod-0 wind power system. D A Spera (NASA, Lewis Research Center, Cleveland, Ohio). In Advanced wind energy systems, Proceedings of the Workshop, Stockholm, Sweden, August 29, 30, 1974. Volume 1. Stockholm, Styrelsen for Teknisk Utveckling, 1976, p 2 63 to 2-99. 7 refs.

Preliminary estimates are presented of vibratory loads and stresses in hingeless and teetering rotors for the proposed NSF NASA Mod-0 wind power system. Preliminary blade design utilizes a tapered tubular aluminum spar which supports nonstructural aluminum ribs and skin and is joined to the rotor hub by a steel shank tube. Stresses in the shank of the blade are calculated for static, rated, and overload operating conditions. Blade vibrations were limited to the fundamental flapping modes, which were elastic cantilever bending for hingeless rotor blades and rigid body rotation for teetering rotor blades. The MOSTAB C computer code was used to calculate aerodynamic and mechanical loads. The teetering rotor has substantial advantages over the hingeless rotor with respect to shank stresses, fatigue life, and tower loading. The hingeless rotor analyzed does not appear to be structurally stable during overloads. (Author)

**A76-28235 #** Reduction of wind powered generator cost by use of a one bladed rotor. R R Pruyn and W Wiesner (Boeing Vertol Co., Philadelphia, Pa.). In Advanced wind energy systems, Proceedings of the Workshop, Stockholm, Sweden, August 29, 30, 1974. Volume 1. Stockholm, Styrelsen for Teknisk Utveckling, 1976, p 2 101, 2 103 to 2 131.

Windpowered generator designs studied were sized for an output power of 1000 kW. The one blade design seems to have significant design and cost advantages (a 30% reduction) over two or more bladed rotors. The one-bladed design has the potential of reducing acquisition cost to \$680 per available kW if the unit is located in a region with mean surface winds of 15 mph. Using the one bladed concept, it is possible to halve the minimum solidity of the rotor, to greatly simplify the rotor hub and to reduce blade costs almost in

half. Vibratory loads of the one bladed rotor appear to be compatible with a 30 year design life. B J

**A76-28236 #** Advanced vertical axis rotor concepts. O Ljungstrom (Styrelsen for Teknisk Utveckling, Stockholm, Sweden). In Advanced wind energy systems, Proceedings of the Workshop, Stockholm, Sweden, August 29, 30, 1974. Volume 1. Stockholm, Styrelsen for Teknisk Utveckling, 1976, p 3-1 to 3 4.

New vertical axis rotor concepts for windpowered generators are reviewed. The concepts include the freedom of arranging the blades in different ways in delta-rotor, Y-rotor and phi-rotor layouts. The straight-bladed concepts (delta and Y) have the advantage of allowing cyclic pitch change to be arranged more easily than for the curved catenary blades of the phi type. Other concepts mentioned include aerodynamic design scaling effects, and the integration of power cables in the structural support system. B J

**A76-28237 #** A high speed vertical axis wind machine. P South (National Aeronautical Establishment, Ottawa, Canada). In Advanced wind energy systems, Proceedings of the Workshop, Stockholm, Sweden, August 29, 30, 1974. Volume 1. Stockholm, Styrelsen for Teknisk Utveckling, 1976, p 3 5 to 3 18.

Various design aspects of high-speed vertical axis wind machines for power generation are considered. These include aerodynamic structural design of rotor blades, blade supports, optimization aspects, the role of blade number and blade manufacturing. A phi type rotor system is considered. Graphs are plotted for power output versus tip speed ratio for single and three blade rotors and rotor drag is plotted versus speed ratio along with measured power versus wind speed ratio. The calculated power is plotted versus wind speed ratio and the aerodynamic normal force distribution for zero bending moment is examined. An optimal configuration with the following characteristics is proposed: a rotor height to diameter ratio of 1.5, the use of two or three blades designed predominantly as tensile members, the blades would be braced to the central column, the solidity would be about 0.2 to allow for a blade zero lift/drag coefficient of 0.01, and power would be taken off just above or just below the lower rotor bearing. B J

**A76-28238 #** Low velocity panemones. A W Sleeswyk (Groningen, Rijksuniversiteit, Groningen, Netherlands). In Advanced wind energy systems, Proceedings of the Workshop, Stockholm, Sweden, August 29, 30, 1974. Volume 1. Stockholm, Styrelsen for Teknisk Utveckling, 1976, p 3 19 to 3 22.

Panemones ('all winds' in Greek) are wind turbines with vertical axis rotors that operate equally well regardless of wind direction at any given instant. The device should in principle operate under conditions when gicing does not occur at circumferential velocities exceeding the wind velocity. The possibility of scaling up the rotor diameter without adversely affecting the angular velocity of the electric generator that may be coupled to the wind turbine led to the building of an open air test stand for low velocity panemones at the University of Groningen. The maximum dimensions of the test rotors were 3 m in diameter and 2 m in height. The power, approximately 2 kW, was dissipated by means of eddy current coupling. The load was adjusted to maintain a preset angular velocity and the torque was measured by means of a full-bridge strain gage torque meter. B J

**A76-28240 #** Wind-powered aqueduct systems. F R Eldridge (Mitre Corp., McLean, Va.). In Advanced wind energy systems, Proceedings of the Workshop, Stockholm, Sweden, August 29, 30, 1974. Volume 1. Stockholm, Styrelsen for Teknisk Utveckling, 1976, p 4 3 to 4 10. 8 refs.

An aqueduct system that would use large-scale wind-driven units to provide power for the pumping of water from the main reservoir to auxiliary reservoirs of the system is considered. The preliminary design study of this system would include a comparison of the following alternatives: the direct mechanical pumping of water, the

direct power generation by wind-turbine units and the use of this power to operate water pumps, the use of wind units to pump water from an auxiliary reservoir below a hydroelectric dam back into the main reservoir and the use of hydroelectric power to operate the electrical pumps of the aqueduct system, the feasibility of reducing the number of wind units required by interconnection with a public utility network or by the use of some means of energy storage. The aqueduct system of the Canadian River Project for furnishing supplementary water to cities in the Texas panhandle is thought to be an ideal system on which to perform initial proof-of-concept experiments on the use of wind units. B J

**A76-28241 # Survey of Oklahoma State University work in energy storage, variable speed constant frequency generators and wind generating systems** W L Hughes, J D Parker, H J Allison, R G Ramakumar, and D D Lingelbach (Oklahoma State University, Stillwater, Okla.) In *Advanced wind energy systems, Proceedings of the Workshop, Stockholm, Sweden, August 29, 30, 1974* Volume 2 Stockholm, Styrelsen for Teknisk Utveckling, 1976, p 5-3 to 5-62 85 refs Contract No. F33657-72-C-0645

An overview is presented of technical and economic aspects of the development of wind power systems. Techniques under investigation as possible means of storing and converting wind energy are discussed, with special attention given to high pressure fuel cells, high pressure electrolysis systems, and the aphodid burner turbine generator. An economic analysis shows that wind energy systems operating in parallel with conventional power lines could significantly reduce fuel costs by pumping electricity directly when available into electric transmission line grids. On the basis of projected fuel and energy cost and consumption data, the long term cost of wind power systems is compared with that of systems based on fossil fuels. Different types of electric generators under consideration for use with wind systems are described, and the design of wind turbines and coupling systems is discussed. C K D

**A76-28242 # Some wind-energy storage options** F R Eldridge (Mitre Corp., McLean, Va.) In *Advanced wind energy systems, Proceedings of the Workshop, Stockholm, Sweden, August 29, 30, 1974* Volume 2 Stockholm, Styrelsen for Teknisk Utveckling, 1976, p 5-63 to 5-65

Results of economic studies of storage systems for energy generated from the wind are summarized. These fall into the categories of electrochemical energy storage systems (batteries or systems that store hydrogen generated by electrolysis), thermal energy storage systems, kinetic energy systems (fly-wheels or superconducting electromagnetic systems), and potential energy systems (pumped hydro-systems or compressed air systems). The minimum economic sizes for utility applications, estimated capital costs per unit, estimated unit lifetimes, dispersed storage capabilities, and estimated turn around efficiencies are given. C K D

**A76-28243 # High pressure hydrogen by electrolysis - The provision of a viable energy economy for isolated communities and its potential application on a larger scale** I Harris and D Highgate (Cranfield Institute of Technology, Cranfield, Beds., England) In *Advanced wind energy systems, Proceedings of the Workshop, Stockholm, Sweden, August 29, 30, 1974* Volume 2 Stockholm, Styrelsen for Teknisk Utveckling, 1976, p 5-67 to 5-75

The possibility of utilizing hydrogen and oxygen produced by electrolysis to meet the energy requirements of isolated communities and to supplement the energy economy of the UK when increasing fuel costs lead to greater dependence on intermittently available energy sources (wind, solar, geothermal, etc.) is examined. Development of high pressure electrolyzers similar to those currently used in submarine life support systems is suggested. Such systems eliminate the need for subsequent handling and compression of the gas and can be produced on a small scale without significant reductions in efficiency. Preliminary analysis indicates that an electrolyser capable of absorbing power at the rate of 25 to 100 KW would be required to meet the energy needs of a typical isolated community. A significant increase in efficiency could be obtained by developing an electrolyser capable of operation in reverse as a fuel cell when needed. C K D

**A76-28244 # Air storage power** L Norberg (Stal Laval Turbin AB, Finspang, Sweden) In *Advanced wind energy systems, Proceedings of the Workshop, Stockholm, Sweden, August 29, 30, 1974* Volume 2 Stockholm, Styrelsen for Teknisk Utveckling, 1976, p 5-81 to 5-89

A compressed air system which acts both as a storage and as an active power producing scheme is proposed as a means of storing energy produced by a nuclear power system to provide peak as needed to meet night time consumption. The air storage method is applied to a gas turbine electric system. When operated as a normal turbine, 2/3 of the shaft output goes to the compressor, and the remaining 1/3 is the net electric output. The compressor and turbine may be operated separately in conjunction with the electric generator/motor drive. When excess power is available the generator is used as a motor compressing air, using electric power equal to 2/3 the rated turbine power. When energy is required, the compressed air is discharged through the turbine. The storage cavern pressure is balanced by a water column. Costs of air storage systems are competitive with hydro systems requiring the construction of artificial storage chambers. C K D

**A76-28245 # Wind-turbine mechanical to electrical conversion systems** R T Smith and T S J Devaiah (Southwest Research Institute, San Antonio, Tex.) In *Advanced wind energy systems, Proceedings of the Workshop, Stockholm, Sweden, August 29, 30, 1974* Volume 2 Stockholm, Styrelsen for Teknisk Utveckling, 1976, p 5-95, 5-97 to 5-114 5 refs

The electrical energy output of Variable-Speed, Constant-Frequency (VSCF) and Constant-Speed, Constant-Frequency (CSCF) electric generation schemes for wind power plants in a power grid is analyzed on the basis of power duration curves. A sample calculation shows that VSCF systems have a slightly higher energy output than comparable CSCF systems. In both systems the output is primarily dependent on the generator efficiency. A VSCF system with no power control but with an excessively large generator generates less energy than a VSCF system with power control and relatively small generator. VSCF systems require a large capital outlay for generators but obviate the elaborate pitch controls characteristic of CFCS systems. A two generator scheme is suggested to alleviate the problem of low generator efficiency at light loads. C K D

**A76-28246 # Today's economy of the 200 kW experimental Gedser windmill** M Johansson (Danske Elvaerkess Forenings Ulfedningsafdeling, Lyngby, Denmark) In *Advanced wind energy systems, Proceedings of the Workshop, Stockholm, Sweden, August 29, 30, 1974* Volume 2 Stockholm, Styrelsen for Teknisk Utveckling, 1976, p 6-15 to 6-17, 6-19 to 6-22

**A76-28247 # Wind energy - Cost effectiveness is the key** C D McCarthy and G Rosen (United Technologies Corp., Hamilton Standard Div., Windsor Locks, Conn.) In *Advanced wind energy systems, Proceedings of the Workshop, Stockholm, Sweden, August 29, 30, 1974* Volume 2 Stockholm, Styrelsen for Teknisk Utveckling, 1976, p 6-29 to 6-35

It has been determined that \$400 (1974 dollars) per rated kilowatt capacity would be a competitive cost for a wind energy conversion system producing electricity, assuming a thirty year lifetime for the system. The cost of installation is assumed to contribute 30% of the total cost, leaving a selling price target of about \$280/kW for the complete system. A rotor using variable pitch blades plus its control system accounts for about 25% of the uninstalled system cost. An allowable cost target of \$42 per rated kilowatt is suggested for rotor blades, which represent 60% of the rotor cost. Ten-year projections of candidate blade materials are given. C K D

**A76-28248 # Wind energy research at the National Research Council of Canada** R J Templin (National Aeronautical Establishment, Ottawa, Canada) In *Advanced wind energy systems, Proceedings of the Workshop, Stockholm, Sweden, August 29, 30, 1974* Volume 2 Stockholm, Styrelsen for Teknisk Utveckling, 1976, p 7-3 to 7-15

The Canadian National Research Council has developed a

curved blade high-speed vertical axis wind turbine with high aerodynamic efficiency. An aerodynamic theory has been developed (Templin, 1974) to analyse the effects of various design variables of this device. The induced velocity is assumed constant throughout the swept volume. The theory takes the correct curved blade shape into account and allows for arbitrary non linear airfoil characteristics, which may be varied along the length of the blades. Theoretical values of the power and overall rotor drag coefficients are in good agreement with wind tunnel measurements. Theoretical results indicate that beyond a value of  $NC/R$  of about 0.2 there is no aerodynamic advantage to be gained by increasing the blade area. An analysis of the mutual interaction of large arrays of wind turbines has led to the assumption that the practical availability of wind energy over large areas is limited to that which can be obtained with turbine arrays having a total swept area not more than 1/1000 of the surface area. Two research programs undertaken with the cooperation of Canadian industries are outlined. C K D

**A76-28249 #** Possibilities for wind energy utilization in the Netherlands. P van Staveren (Centrale Organisatie TNO, Delft, Netherlands). In *Advanced wind energy systems, Proceedings of the Workshop, Stockholm, Sweden, August 29, 30, 1974* Volume 2. Stockholm, Styrelsen for Teknisk Utveckling, 1976, p 7-17 to 7-23.

**A76-28250 \* #** The U.S.-NSF/NASA wind energy conversion systems /WECS/ program. L V Divone (National Science Foundation, Washington, D C) and J M Savino (NASA, Lewis Research Center, Cleveland, Ohio). In *Advanced wind energy systems, Proceedings of the Workshop, Stockholm, Sweden, August 29, 30, 1974* Volume 2. Stockholm, Styrelsen for Teknisk Utveckling, 1976, p 7-25 to 7-33.

The five-year research and development plan of the NSF/NASA Wind Energy Conversion Systems (WECS) program is outlined. The program includes mission studies to determine energy use patterns and requirements and define specific applications for wind energy systems, wind energy resource assessment and development, and development of cost effective components and subsystems. The program is also directed towards the development of energy storage systems to make wind powered systems firm power sources where appropriate. A 100 kW experimental wind generator (Model Zero) is being designed as a flexible test bed for a variety of system components. Designs will be developed for units in the 50 to 200 kW and 500 to 3000 kW size ranges. C K D

**A76-28251 #** The Swedish wind energy R&D program proposal for three years 1975-77. O Ljungstrom (Styrelsen for Teknisk Utveckling, Stockholm, Sweden). In *Advanced wind energy systems, Proceedings of the Workshop, Stockholm, Sweden, August 29, 30, 1974* Volume 2. Stockholm, Styrelsen for Teknisk Utveckling, 1976, p 7 35 to 7-38.

**A76-28252 #** DC-generator and thyristor converter is a good alternative to AC-synchronous - for large wind generators. B Sodergard. In *Advanced wind energy systems, Proceedings of the Workshop, Stockholm, Sweden, August 29, 30, 1974* Volume 2. Stockholm, Styrelsen for Teknisk Utveckling, 1976, p 9-7, 9-9 to 9-20.

The performance of a large AC-synchronous generator is compared with that of a DC generator and thyristor in a wind power system. The DC equipment provides good attenuation of gust transients and is capable of giving full voltage output at as low as 40% of the normal full speed. The acceleration time for a wind rotor at rest at low wind velocities is shorter for the DC generator than for the AC equipment. Sample calculations carried out for a 230 kW wind generator show that the annual energy output with a DC-equipped system is 8% higher than that of the AC system. C K D

**A76-28397** Hydrogen sorption in  $LaNi_5$ . O Boser (North American Philips Corp., Briarcliff Manor, N J). *Journal of the*

*Less-Common Metals*, vol 46, Apr 1976, p 91-99 19 refs

To determine the sorption rates of hydrogen in  $LaNi_5$  a set-up was designed that allowed the measurement of both the absorption and desorption rate in the two-phase region. A charge chamber was charged (evacuated) with a small amount of hydrogen, a valve was opened to the sample, hydrogen was absorbed (given off) until the plateau pressure was reached. The resulting pressure changes could be fitted to a straight line by plotting the reciprocal pressure versus time. The measured sorption rates are independent of pressure (up to 5 atm) and independent of the sense of sorption (ab- or desorption). If the sorption rates are plotted logarithmically versus  $1/T$ , the activation energy for sorption can be determined as 7.6 kcal/mol  $H_2$ . This value agrees closely with the formation energy of the  $LaNi_5$  hydride and thus leads to the conclusion that the phase transformation is the rate controlling process for sorption. (Author)

**A76-28398** Hydrogen production from water by thermochemical cycles. C E Bamberger and D M Richardson (Oak Ridge National Laboratory, Oak Ridge, Tenn.). *Cryogenics*, vol 16, Apr 1976, p 197-208 67 refs. ERDA-sponsored research.

The article focuses on the production of hydrogen from water via thermochemical cycles (series of chemical reactions at different temperatures with thermal energy transformed into chemical energy), to provide a practical and efficient source of hydrogen as an energy source. Hydrogen production from water via electrolysis, direct thermal cracking, or chemical reactions are discussed briefly. Primary sources of energy for the thermochemical cycles under consideration are examined. Restrictions on the types of useful thermochemical cycles are considered. A literature review is presented for the thermochemical cycles developed to date, the degree of completeness of the chemical reactions, and cost and efficiency problems. Some 72 thermochemical cycles are tabulated with relevant data. R D V

**A76-28478** The status of the satellite solar power station. P E Glaser (Arthur D Little, Inc., Cambridge, Mass.). In *Future space activities, Proceedings of the Thirteenth Goddard Memorial Symposium, Washington, D C, April 11, 1975*. Tarzana, Calif., American Astronautical Society, 1976, p 81-102 7 refs.

The option of using satellite solar-power stations for large-scale power generation on earth, collecting and converting solar energy into microwave energy, transmitting it to the earth's surface, and transforming it into electricity, is reviewed. The current state of technology and the necessary developments for accomplishing these functions are discussed, and the results of recent microwave transmission and rectification demonstration tests are mentioned. The requirements for earth-to-orbit transportation are presented. Consideration is given to cost projections, resource use, and economic comparisons. Environmental issues, including the impact of waste heat release, space vehicle exhaust, noise pollution, and location of antenna sites are listed. Biological effects and radio-frequency interference are explored. The time frame for accomplishing the operational system is outlined. (Author)

**A76-28508 #** Method for the hydrodynamic and thermal calculation of circulating systems (O metodike gidrodinamicheskikh i teplovyykh raschetov tsirkulyatsionnykh sistem). G N Kononenko. In *Methods for the mathematical modeling of technical problems*. Kiev, Izdanie Instituta Matematiki AN USSR, 1975, p 120-126 5 refs. In Russian.

The problem of heat transfer in fissured rocks becomes important in the extraction of geothermal resources from the upper earth crust. Electro-analog (rheoelectrical) simulation is used to model the hydrodynamic and thermal process in a circulating system for extracting heat from a massif of fissured rocks. The temperature distribution in the system is studied and an equation for the conservation of thermal energy is solved. The analog simulation is

used to solve systems of equations for plane-radial flow and for unsteady convection B J

**A76 28509 #** Some methods for constructing thermal and hydrodynamic fields in systems for heat extraction from the earth (O nekotorykh metodakh postroeniia teplovykh i gidrodinamicheskikh polei v sistemakh izvlecheniia tepla zemli) G N Kononenko and E V Imokhina In Methods for the mathematical modeling of technical problems Kiev, Izdanie Instituta Matematiki AN USSR, 1975, p 127-133 In Russian

The paper investigates a circulating system for the extraction of geothermal energy from massifs of fissured rocks from the upper earth crust. The system consists of boiler, pumps, heat exchanger, purifiers and a heat transmission line and operates on a fluid filtration principle. The EGDA integrator for the electro analog (rheo-electrical) simulation of dynamic processes is used to model the convective heat and mass transfer in the combined heat extraction-fissured rock system in order to obtain the heat extraction coefficient of the circulating system B.J.

**A76 28691 #** Some elements of the theory of the search for useful minerals (Elementy teorii poiska poleznykh iskopaemykh) lu A Voznenin In Some problems of computational and applied mathematics Novosibirsk, Izdatel'stvo Nauka, 1975, p 281-291 In Russian

The paper attempts to develop a theory of the search for useful minerals (eg, fossil fuels) whose purpose would be the more effective application of new complex physical-chemical search techniques, the development of mathematical-economic search models and the utilization of automatic control systems for search tasks. It is shown that the search can be constructed on the basis of the relation between minerals whose direct detection would entail large costs and indicator minerals which could be detected without large costs. A 'probe property' matrix is used to classify geological bodies. The matrix contains identification and description grids indicating minuteness, correctness and content of description B J

A method for utilizing the decay heat of actinide wastes to power an electric thrust vehicle is proposed. The vehicle launched by shuttle to earth orbit and to earth escape by a tug obtains electrical power from the actinide waste heat by thermionic converters. The heavy gamma ray and neutron shielding which is necessary as a safety feature is removed in orbit and returned to earth for reuse. The problems associated with safety are dealt with in depth. A method for eliminating fission wastes via chemical propulsion is briefly discussed. Author

**THE EFFECT OF RAW MATERIALS FOR STEELMAKING  
ON ENERGY REQUIREMENTS**

D I T Williams and D S Thornton Aug 1975 22 p  
(PB-245058/3 CAPL-SM/A/14/75) Avail NTIS HC \$3 50  
CSCL 11F

The value of raw materials used in steelmaking is influenced by the impurities present, the grade of steel made and the steelmaking process employed. It is important that the maximum benefits are derived from the available raw materials for considerations of both economics and conservation of resources. The major factors affecting the energy requirements of the process routes are examined in an attempt to highlight where maximum benefits can be achieved. The presence of contaminants adhering to iron and scrap can increase the thermal requirements by significant amounts, thereby adding to the fuel costs in steelmaking. GRA

**THE DEVELOPMENT AND TESTING OF A NOVEL HIGH  
TEMPERATURE CERAMIC RECUPERATOR**

W R Laws, W R Laws, H R McChesney, D A Winkworth and E Morris Aug 1975 21 p refs  
(PB-245059/1 CEL/CE/14/75) Avail NTIS HC \$3 50 CSCL 13A

Energy Consumption in a large integrated steelworks is described. Large quantities of energy are lost in the form of high-temperature thermal effluents, even from plants where waste heat recovery is already practiced. A short survey of traditional designs of ceramic and metallic recuperators highlights performance limitations of existing plant. The development of a new design of ceramic recuperator for operating with waste gas temperatures of up to 1300C is described. The development program is briefly mentioned, referring to theoretical computer model studies and the testing of components. The design of a prototype ceramic recuperator for an oil-fired soaking pit is described and preliminary results given. Potential applications are discussed. GRA

(Contract DAAD05-73 C-0559)  
(AD-A014947) Avail NTIS CSCL 21/4

This STAF reviews the broad problem of the impact on the U.S. Army of the use of synthetic fuels (defined as a non-petroleum derived fuel) over the time period of 1975 to 2000. The STAF is divided into three basic parts. The first part involves a forecast of which synthetic fuels will have a major impact in the time period under study. In the second part of the STAF, those alternate fuels identified as the most feasible synthetic fuels in the future were subjected to detailed analyses. The third part of the STAF consists of the identification of a number of areas which appear to offer promise for fruitful R and D in the synthetic fuel area.

**THE TRADEOFF BETWEEN ENERGY AND THE ENVIRONMENT:  
THE CASE OF CRUDE OIL SUPPLIES FOR CALIFORNIA** Ph.D. Thesis

Donald W Barnett 1975 319 p  
Avail Univ Microfilms Order No 76-1337

A methodology is developed using linear programming as an analytical tool that ranks various energy sources in terms of their social desirability when environment as well as production costs are considered. The model is confined to the petroleum resources that do or could supply the California market. A comprehensive cost analysis is undertaken for each fuel. The objective is to minimize the cost of supplying the California market subject to resource, sulfur and oil spill constraints. The model is designed so the effect of the different combinations of demand, cost, sulfur content and oil spill levels can be studied. The social desirability of an oil source is indicated by two criteria.

whether the source is included in the optimal solution and the size of the associated shadow price. The larger the shadow price, the greater the desirability of obtaining an increase in production of that resource. The solutions generated by the model indicated that the environmental tradeoffs can be surprisingly large, and that foreign oils can be economically and environmentally inferior to certain domestic offshore oils. A program is outlined to reclaim 6 000 acres of the worst strip-mined land on public property in 5 states: Pennsylvania, Ohio, Maryland, Kentucky, and Alabama. The five basic goals of the project are: restore public lands which have been surface mined; demonstrate that surface-mined land can be restored in ways that preserve or enhance the environment; provide immediate employment; improve secondary employment opportunities; and long-term economic prospects of reclaimed areas through construction of such land-utilization features as public forests, grazing lands, farm lands, parks, recreation and tourism opportunities. make possible improvements in national coal production.

Information is presented pertaining to the sulfur content of crude oil produced during 1971 in the United States and in some foreign countries. These data are presented for fields in 26 States that accounted for about 76 percent of the U.S. oil production during 1971 and for fields in 24 foreign countries that accounted for about 64 percent of the total oil produced from these countries during the same year. The tabular data include the following items: geographical area or foreign country; field name; sulfur content; analysis number; geologic formation; geologic age; depth of formation; and 1971 oil production. Summary tables show the classification of U.S. and foreign crude oil production during 1971 by sulfur content. The objective was to classify the 1971 crude oil production from U.S. and foreign fields where crude oil analyses were available according to sulfur content.

A thermoelectric power system is described which is particularly adaptable for use in outer space. A nuclear reactor heats a working fluid which in turn supplies heat to a plurality of thermoelectric generators spaced about a ring shaped support. A first heat pipe is employed to couple heat between the hot fluid and hot junction of the thermoelectric element of each generator, and a second heat pipe couples heat away from the cold junction of each thermoelectric element. Each of the second heat pipes are elongated flexible units adapted to be folded upon launch and thereafter extended in space to provide a substantial area for the radiation of heat to be discharged.

**US ELECTRICAL ENERGY DILEMMA AND AN ENERGY MODEL FOR THE ELECTRICAL UTILITIES OF IOWA. Ph D Thesis**

Turan Gonen 1975 336 p  
Avail Univ Microfilms Order No 76-1841

Energy sources were examined; energy supply and demand were projected to the year 2000; various U.S. energy forecasts were compared, and some energy related issues were discussed in relation to these forecasts. A computerized electric energy cost model was developed for the electric power industry to minimize the cost of energy used for electric generation by optimum allocation of various fuel-mixes over a period of n years where the energy is subject to a large number of physical and environmental constraints. The results showed that the computerized model is a promising tool in long range power systems planning. It was demonstrated that there can be considerable savings to the companies and to the consumer, if the companies act as a united group to meet their customers' electrical energy demand in an optimum fashion. **WIND/SOLAR ENERGY INVESTIGATION, A FEASIBILITY STUDY. Ph D Thesis**

George Hazen Stickney 1975 489 p  
Avail Univ Microfilms Order No 76-1311

The question of utilizing the wind and sun to provide the energy required by an average home for space heating, air conditioning, and a hot water supply was considered. Energy requirements were compared with the daily availability of wind and solar energy and the storage needed to reconcile the two was determined. Preliminary design procedures are shown for wind and solar energy collection and systems storage. Initial design procedures are also shown for an accompanying heating and cooling system. Although wind and solar energy are free, non-depleting and non-polluting, the high initial cost of the required hardware causes them to be economically noncompetitive with more conventional fuels. Specifically, this system was estimated to have an annual cost in 1975 of around 2 1/2 times that of a home heated by natural gas and about 13 percent higher than an all electric home. However, this cost was estimated to drop by at least one third by 1985.

The potential was examined of hydrogen-fueled supersonic vehicles designed for cruise at Mach 2.7 and at Mach 2.2. The aerodynamic weight and propulsion characteristics of a previously established design of a LH<sub>2</sub> fueled Mach 2.7 supersonic cruise vehicle (SCV) were critically reviewed and updated. The design of a Mach 2.2 SCV was established on a corresponding basis. These baseline designs were then studied to determine the potential of minimizing energy expenditure in performing their design mission and to explore the effect of fuel price and noise restriction on their design and operating performance. The baseline designs of LH<sub>2</sub> fueled aircraft were then compared with equivalent designs of jet A (conventional hydrocarbon) fueled SCVs. Use of liquid hydrogen for fuel for the subject aircraft provides significant advantages in performance cost noise pollution sonic boom and energy utilization. Author

#### **TECHNICAL EVALUATION STUDY ENERGY-RECOVERY SOLID WASTE INCINERATION TO NAVAL STATION, MAYPORT, FLORIDA**

S A Hathaway and H G Rigo Feb 1975 60 p refs

(AD-A015615 CERL-TR-E-51) Avail NTIS CSCL 21/4

This study was undertaken to assess the feasibility of energy-recovery incineration of solid waste at Naval Station Mayport Florida. It was found that use of solid waste as a fuel for steam generation at Naval Station Mayport is technically and economically feasible and environmentally compatible. The recommended system employs a clean-fuel fired basket-grate incinerator in series with an energy-recovery train consisting of an afterburner and boiler. The afterburner fires fuel reclaimed at an on-station bilge and fuel tank waste oil treatment facility. Refuse-derived fuel (RDF) is fired one shift five days per week with the auxiliary burner assuming the load during nights and weekends. Production of 22 700 pounds of steam/hour can be achieved. The benefit-to-cost ratio of this system is 8:1. Through implementation of this system a net fuel savings of 345 800 gallons/yr can be achieved excluding the amount of the reclaimed oil used. Design criteria are provided. GRA

#### **TECHNICAL EVALUATION STUDY SOLID WASTE HEAT RECLAMATION AT NAVAL AIR TEST CENTER PATUXENT, MARYLAND**

H G Rigo and G E Quindry Nov 1974 46 p refs

(AD-A015613 CERL-TR-E-60) Avail NTIS CSCL 13/2

This study was initiated to evaluate the solid waste disposal system at Naval Air Test Center Patuxent MD and to ascertain the feasibility of solid waste heat reclamation at the base. The solid waste stream was analyzed applicable standards were evaluated and the cost and performance characteristics of current solid waste heat reclamation units were reviewed. Recommendations were based on consideration of the facility benefit to cost ratio. It was found that continuing the current method of solid waste disposal on an on-base landfill operation would be economically and environmentally sound. New solid waste collection equipment and altered procedures at the landfill site were recommended to substantially improve the economics and life expectancy of the on-base refuse management system. GRA

**ENERGY CONSERVATION THROUGH URBAN TRANSPORTATION PLANNING** Final Report

Mar 1975 186 p refs

(PB-245214/2 PTI-7515) Avail NTIS HC \$7 50 CSCL 10A

Techniques for conserving energy in urban passenger transport are described. A systems approach for evaluating these simultaneously in order to formulate areawide passenger transportation energy policy is presented. It consists of a simple computer technique for estimating the conservation value of various schemes. The program is also of value in assessing the energy impact of individual energy conserving programs. Because only local planners are familiar with the economic environmental and political constraint on policy and programs, the tool is intended for use in urban regions. It is, however, written in general terms and as such, if used in all urban areas in the U.S., could offer realistic national estimates of urban passenger transportation energy requirements in the short term. GRA

**THE ECONOMIC IMPACT OF ENERGY SHORTAGES ON COMMERCIAL AIR TRANSPORTATION AND AVIATION MANUFACTURE VOLUME 1 IMPACT ANALYSIS Final Report**

J. E. Gorham, D. Gross, and J. C. Snipes. Jun. 1975. 259 p. refs. 2 Vol.  
 (Contract FEA-C-03-50033-00)  
 (PB-246271/1, FEA/B-75/588-Vol-1) Avail. NTIS. HC \$9.00. CSCL 05C

The impact is evaluated of the energy shortage on commercial air transportation and its related manufacturing industries. As a result, the forces are analyzed of change at work in the air transportation industry relating to the energy crisis, both desirable and undesirable, that are likely to affect the way the industry does business, its efficiency, or inefficiency in the use of fuel, the impact of continued fuel price increases, and the ability of the industry to use the most fuel-efficient aircraft presently or prospectively available. The cumulative impact is considered of

these factors affecting air transportation on the need for number of and timing of requirements for new aircraft in order to assess the secondary impact on the aircraft engines, and parts manufacturing industries. GRA

**ALLOCATION MODELS FOR ENERGY PLANNING Ph.D. Thesis**

Reynaldo Sanchez Mariano. 1975. 239 p.  
 Avail. Univ. Microfilms. Order No. 76-3196

The problem of shortages of varying time duration originating from the electrical energy sector is investigated. Two different time frameworks are used to characterize the incidence of an electricity shortage: a periodic shortage occurring only for a few hours during the day at times of peak load and a sustained shortage which is severe enough to result in permanent reduction of supply. The periodic shortage problem is approached by using a priority-weighting method. Energy users are first classified into different industry groups. Then, by pairwise comparisons of users according to various criteria, an overall measure of importance of each industry in relation to the others is expressed on a ratio scale between 0 and 1, is derived. A linear programming model is developed to study the problem of a sustained shortage. A short-term framework is assumed and the state of technology is taken as constant. The magnitude of the shortage and constraints on the model were introduced as parameters to derive alternative allocation plans under various conditions. Dissert. Abstr.

 R Manvi R Caputo and T Fujita *In its Hydrogen Tomorrow*  
 Dec 1975 47 p refs  
 CSCL 10B

The historical uses of hydrogen are described along with potential new uses which could develop as a result of the diminishing supply of conventional fossil fuels such as natural gas. A perspective view of hydrogen both as a chemical feedstock and as a fuel is necessary to understand its relationship to the overall national energy projections. These projections which show energy usage in terms of use sectors forms of energy and sources of energy do not specifically identify hydrogen as a component of the energy system. By superimposing the traditional roles upon the new opportunities for hydrogen on the energy projections the role of hydrogen and future projections is developed within the context of the national energy projections. Use supply and other factors affecting application are interrelated and are discussed. Author

**A MOUNT FOR CONTINUOUSLY ORIENTING A COLLECTOR DISH IN A SYSTEM ADAPTED TO PERFORM BOTH DIURNAL AND SEASONAL SOLAR TRACKING Patent Application**

Lott W Brantley and Billy D Lawson inventors (to NASA) Filed 29 Jan 1976 12 p  
(NASA-Case-MFS 23267-1 US-Patent-Appl-SN 653422) Avail NTIS HC \$3 50 CSCI 131

The mount is characterized by a rigid, angulated axle having a linear midportion supporting a collector dish and oppositely extended end portions normally related to the midportion of the axle and received in spaced journals. The longitudinal axis of symmetry for the midportion of the axle is coincident with a seasonal axis while the axes of the journals are coincident with a diurnal axis paralleling the earth's polar axis. Drive means are provided for periodically displacing the axle about the diurnal axis at a substantially constant rate while other drive means are provided for periodically indexing the dish through 1 deg about the seasonal axis once during each of the earth's successive rotations about its polar axis. The position of the dish relative to the axle is thus varied for accommodating seasonal tracking as changes in the angle of inclination of the polar axis occur. NASA

(Contract NAS7-100)

(NASA-Case-NPO-13675-1 US-Patent-Appl-SN-658132) Avail NTIS HC \$3 50 CSCI 21D

Hydrogen is produced by the solar photolysis of water in a photooxidation vessel in the presence of a water soluble

photooxidizable reagent and an insoluble hydrogen recombination catalyst. Simultaneously oxygen is produced in a photoreduction reactor in the presence of an insoluble photoreduction reagent catalyst. When spent the solution from the first reactor is fed into the second reactor. A reaction occurs in the dark in which the redox reagents are regenerated and the regenerated photooxidation reagent solution is recycled to the first reactor. The photooxidation reagent is preferably a europium salt and the associated hydrogen recombination catalyst is a material such as platinum supported on glass beads. The photoreduction catalyst is a bifunctional reagent catalyst including a transition metal salt such as manganese oxychloride covalently bonded to the surface of a high area support such as glass fibers together with a hydroxyl or chlorohydroxyl decomposition catalyst of high area. This dynamic linear-programming model on a pilot scale is an attempt to describe in physical terms many of the technological interactions within and across the sectors of the economy including a detailed energy sector. The general objective of the model is to determine, in the face of the changing energy picture, what the country can achieve in physical terms over the long term. say 30 years. Preliminary work on the pilot model indicates that it can be completed within six months and that several useful scenarios can be run during the ensuing six months GRA

**FUTURE US ENERGY DEMANDS BASED UPON TRADITIONAL CONSUMPTION PATTERNS LEAD TO REQUIREMENTS WHICH SIGNIFICANTLY EXCEED DOMESTIC SUPPLY**

*In its The Future Environment* 15 Jul 1975 39 p refs

**CSCL 10B**

Energy consumption in the United States has risen in response to both increasing population and to increasing levels of affluence. Depletion of domestic energy reserves requires consumption modulation, production of fossil fuels, more efficient conversion techniques, and large scale transitions to non-fossil fuel energy sources. Widening disparity between the wealthy and poor nations of the world contributes to trends that increase the likelihood of group action by the lesser developed countries to achieve political and economic goals. The formation of anticartel cartels is envisioned GG

A bill is proposed which is directed to the attainment of the collective goals of increasing domestic supply conserving and managing energy demand and establishing standby programs for minimizing the nation's vulnerability to major interruptions in the supply of petroleum imports. The bill would apply price controls to the entirety of domestic crude oil production in an attempt to restore elements of reason to a marketplace whose mechanisms are made to counteract the influence of cartel pricing and to insulate the economy at least in part from further sharp inflationary increases in petroleum prices. The bill would also establish regulatory programs to bring about measured savings in consumption of energy by improving the efficiency of products and cars. Targeted goals for bettering industrial efficiencies are provided. And a gasoline savings program is established which makes use of allocation and supply controls to prevent growth in gasoline consumption over the next three years and where practicable to reduce existing demand levels by an additional 2 to 4 percent. The bill's main provisions are discussed in detail. Author

**DESIGN OF A FORCE-FREE INDUCTIVE STORAGE COIL**  
 O K Mawardi Apr 1975 11 p refs  
 (Contract W-7405-eng-36)  
 (LA-5953-MS) Avail NTIS HC \$4 00

Force free coils are considered for various applications as energy storage devices. A novel energy storage system consisting of both toroidal and poloidal coils is developed. In this system, the Lorentz forces on the two coils are in opposition and can be made to cancel by having the proper ratio of ampereturns in the two coils. A general discussion of force free coil design is given, and the toroidal-poloidal coil system is described. The materials costs of magnets constructed with this and other geometries are compared. The conclusions are that conductor cost of this system lies between those of solenoids and toroids, and that the costs of structural material may be considerably less than either of these simpler coils.  James William Connell III 1975 295 p  
 Avail Univ. Microfilms Order No. 76-5275

A comprehensive digital computer design model for a closed Rankine power cycle utilizing the temperature potential of two ocean currents which provide the heat source and heat sink for the power cycle is presented. A simplified plate-fin heat exchanger surface geometry is proposed for use by both the evaporator and condenser. A detailed numerical design technique is presented for the proposed compact exchanger geometry. The evaporator modeling is one-dimensional and employs the empirical results for predicting local values of the working fluid forced convection evaporating heat transfer coefficient. The condenser modeling is also one-dimensional and employs a combination of analytical and empirical technique for predicting local values of the working fluid forced convection condensing heat transfer coefficient. In addition, computational procedures for evaluating local values of the fluid phase volumetric concentrations and two-phase pressure gradient are included in the design technique. Dissert. Abstr.

Industry consumes about 40 percent of the total primary energy used in the United States. Natural gas and oil, the major industrial fuels, are becoming scarce and expensive; therefore, there is a critical national need to develop alternative sources of industrial energy based on the more plentiful domestic fuels--coal and nuclear. This report gives the results of a comparative assessment of nuclear- and coal-based industrial energy systems which include technical, environmental, economic, and resource aspects of industrial energy supply. The nuclear options examined were large commercial nuclear power plants (light-water reactors or high-temperature gas-cooled reactors) and a small [approximately 300-MW(t)] special purpose pressurized-water reactor for industrial applications. Coal-based systems selected for study were those that appear capable of meeting environmental standards especially with respect to sulfur dioxide. Author (NSA)

Energy use by the federal government during the third quarter of the Fiscal Year 1975 (Jan-Mar 1975) is analyzed. The total amount of energy saved during the first 9 months of FY 75 is 425.4 trillion Btu, which amounts to a total reduction in use of 25.3 percent, which is about 10 percent more than ordered by the President. Energy use is monitored in the 26 Federal departments and agencies that account for about 99 percent of all the energy expended by the federal government. Use is measured in two broad categories: (1) energy used in buildings and facilities and (2) energy used in operating vehicles and other similar equipment. Data also reflect the types of energy and amounts of each that the government uses. GRA

Competitive conditions in the energy industries using Western States Petroleum as a model are examined. The report examines the extent of economic concentration in such areas of the market as crude oil production, refining and marketing. It also examines three areas of industry conduct for antitrust implication: Withdrawal from gasoline marketing by major firms in the Pacific Northwest occurring in late 1973; control of intrastate crude oil pipelines in California by major oil firms to the alleged exclusion of independent refiners and producers; and assertions that the major oil firms are holding California crude oil prices down through the exercise of their market power as buyers. An examination was made of the legal issues presented by the question of regulatory jurisdiction over the Alaska pipeline GRA

 Richard L Goen and Ronald K White Jun 1975 112 p refs  
 (Contract DI-14-01 0001-1885 SRI Proj EGU-3519)  
 (PB-245652/3 FEA/D-75 590) Avail NTIS HC \$5.50 CSCI 10A

The report examines and explains the differences in per capita energy consumption between the United States and West Germany and quantifies the factors involved. West Germany uses only half as much energy per capita as the United States. Energy use per capita for transportation is only one-fourth of that of the United States for residential space heating (climate corrected) only one-half for other residential uses only one-fourth and for industrial uses 58 percent. The United States uses at least 40 percent more energy for industry in relation to output as West Germany. The total energy use in the United States in relation to national income is about 50 percent greater than in West Germany. This large disparity in energy use between the two countries suggests that continued economic growth and improvement in the standard of living in the United States should be possible without a proportionate increase in energy consumption GRA

**ENERGY-RELATED RESEARCH AND DEVELOPMENT**

Washington GPO Apr 1975 137 p Rept for Comm on Aeron and Space Sci, 94th Congr 1st Sess Apr 1975 (GPO-51-189) Avail SOD-HC \$1 55

An update is presented of the report on energy-related research and development being conducted within the NASA. The various projects in energy research and development are discussed with emphasis on solar and nuclear energy. Possibilities of energy conversion, transmission and storage are presented with views of eventual application to transportation propulsion systems. Priority is given to energy and environment conservation in regard to fuel consumption and inefficient energy systems. Finally relevant space and nuclear research is studied and the solutions to the energy problems is thought to rely heavily on the technology derived from these two sources. L S

**COMPARATIVE EVALUATION OF PHASE 1 RESULTS FROM THE ENERGY CONVERSION ALTERNATIVES STUDY (ECAS)**

Feb 1976 375 p refs Sponsored in part by ERDA and NSF (NASA-TM-X-71855 E-8596) Avail NTIS HC \$10 50 CSCI 10A

Ten advanced energy conversion systems for central-station based-load electric power generation using coal and coal-derived fuels which were studied by NASA are presented. Various contractors were selected by competitive bidding to study these systems. A comparative evaluation is provided of the contractor results on both a system-by-system and an overall basis. Ground rules specified by NASA such as coal specifications, fuel costs, labor costs, method of cost comparison, escalation and interest during construction, fixed charges, emission standards and environmental conditions are presented. Each system discussion includes the potential advantages of the system, the scope of each contractor's analysis, typical schematics of systems, comparison of cost of electricity and efficiency for each contractor, identification and reconciliation of differences, identification of future improvements and discussion of outside comments. Considerations common to all systems such as materials and furnaces are also discussed. Results of selected in-house analyses are presented in addition to contractor data. The results for all systems are then compared. Author

**DEVELOPMENT OF A SOLAR-POWERED RESIDENTIAL AIR CONDITIONER Final Summary Report**

28 Nov 1975 146 p  
(Contract NAS8-30758)  
(NASA-CR-144234) Avail NTIS HC \$6 00 CSCI 10A

The initial objective of the program was the optimization (in terms of cost and performance) of a Rankine cycle mechanical refrigeration system which utilizes thermal energy from a flat solar collector for air conditioning residential buildings. However, feasibility investigations of the adsorption process revealed that a desiccant type air conditioner offers many significant advantages. As a result, limited efforts were expended toward the optimization of such a system. D M L

**MECHANICAL CAPACITOR**

James A Kirk, Philip A Studer and Harold E Evans Washington Mar 1976 61 p refs

(NASA-TN-D-8185 G-7639) Avail NTIS HC \$4 50 CSCI 10C

A new energy storage system (the mechanical capacitor), using a spokeless magnetically levitated composite ring rotor is described and design formulas for sizing the components are presented. This new system is configured around a permanent magnet (flux biased) suspension which has active servo control in the radial direction and passive control in the axial direction. The storage ring is used as a moving rotor and electronic commutation of the stationary armature coils is proposed. There is no mechanical contact with the rotating spokeless ring, therefore long life and near zero rundown losses are projected. A 7-kW h system is sized to demonstrate feasibility. A literature review of flywheel energy storage systems is also presented and general formulas are developed for comparing rotor geometries. Author

Washington GPO 1974 290 p refs Prepared for Comm on Commerce 93d Congr, 2d Sess Oct 1974  
(GPO-35-814) Avail SOD HC \$3 50

A survey was conducted of the nation's 100 largest industrial corporations to gain information on the measures they have taken to reduce energy waste and to improve the efficiency of energy utilization in their operations. Of those surveyed, 87 companies replied. All reported the establishment of some form of energy conservation program. Many indicated that they had initiated energy economy programs even before the seriousness of the energy crisis became widely known. Several of the companies also noted that energy conservation is not only a fulfillment of corporate responsibility but also sound business practice. In some cases, overall energy savings of up to 26% were reported. Summaries and selected examples of the various ways industrial executives assemble energy data, coordinate energy policies, and the results of these efforts are presented. This analysis of the responses is divided according to specific areas of corporate energy conservation programs. The full texts of many of the responses are included. Author

Major energy issues affecting California were studied

Considerable emphasis was placed on developing a coordinated state policy response which is harmonious with national interests. A description of past and future energy sources is first presented and uses of energy in California are discussed. Several energy supply issues are then addressed. West-East oil movement, offshore oil and gas development, a northern California deepwater port, liquefied natural gas, gas transportation from the North Slope of Alaska, natural gas regulation and allocation policies, electricity generation and the development of alternative energy sources. Energy conservation measures are also examined in the transportation, residential, commercial and industrial sectors. Different scenarios of California's energy future, each of which incorporates a different set of policy actions, are discussed and various institutional alternatives for formulating and implementing state energy policy are examined. **DEVELOPMENT OF A HIGH EFFICIENCY THIN SILICON SOLAR CELL. Quarterly Report**

Joseph Lindmayer. Mar 1976. 22 p. Prepared for JPL. (Contracts NAS7-100 JPL-954290) (NASA-CR-146770 SX/105/2Q QR-2). Avail. NTIS HC \$3.50. CSCL 10A

One hundred thin (120 microns to 260 microns) silicon-aluminum solar cells were fabricated and tested. Silicon slices were prepared into which an aluminum alloy was evaporated over a range of temperatures and times. Antireflection coatings of tantalum oxide were applied to the cells. Reflectance of the silicon-aluminum interfaces was correlated to alloy temperature (graphs are shown). Optical measurements of the rear surface-internal reflectance of the cells were performed using a Beckman spectrophotometer. An improved gridline pattern was evaluated and stability tests (thermal cycling tests) were performed. Results show that: (1) a high-index, high-transmittance antireflection coating was obtained; (2) the improved metallization of the cells gave a 60 percent rear surface-internal reflectance and the cells displayed excellent fill factors and blue response of the spectrum; (3) an improved gridline pattern (5 micron linewidths compared to 13 micron linewidths) resulted in a 1.3 percent improvement in short circuit currents; and (4) the stability tests showed no change in cell properties. (PB-245604/4 NSF/OEP-74-18055-1). Avail. NTIS HC \$3.50. CSCL 21D

The technological and economical feasibility is discussed of several alternative energy sources as replacements for oil and gas in the production of industrial process heat. Current industrial fuel usage patterns are described quantitatively and classified into categories relevant to potential replacement by the alternate energy sources. The alternate sources are characterized at their current and near term expected state of development. For those energy sources having a technological capability to replace industrial oil or gas in significant quantity, the comparative economics of use are evaluated for the present and future points in time. For those sources which are or may become both economically and technologically competitive with oil and gas, primary research and development needs are identified. GRA

(PB-246201/8 IMMR1-PD1-75-Sect-1) Avail NTIS HC \$4 00 CSCL 07A

As can be noted in the bibliography many highly competent and well recognized authorities are seriously considering methanol as an energy source of significant magnitude. Most of the studies do not emphasize investment capital which even at modest

implementation of the options noted for methanol's future could range from \$10 to \$30 billion. The published work which does include investment and product cost estimates is usually optimistic. In the literature the topical energy spectrum discussed is highly undefined. Policy formulation is in the early stages of development. The feedstock phases of energy supplies are defined. Relations and capital is considered in the high-risk realm. In spite of this technology poses a reasonable potential of resolving these interactions. This potential cost and problem resolution plus the capacity of methanol to supplant a portion of the domestic crude oil leads to the conclusion that the probability of extensive methanol production from coal as an energy source is high. **ASSURED ENERGY RECEPTIVITY STUDY Final Report**

6 Jun 1975 61 p. Sponsored by Transit Develop Corp  
(PB-246244/8 TDC-AER-75-1) Avail NTIS HC \$4 50 CSCL 10B

The objective of this study is to compare a conventional chopper-controlled train propulsion system without regeneration with two schemes of regeneration: (1) natural receptivity and (2) assured receptivity. A system that employs natural receptivity regeneration converts the kinetic energy of braking trains to electrical energy which is used to power onboard equipment. An assured receptivity regeneration system operates in a manner similar to a natural receptivity system except that the excess electrical energy is stored, dissipated, or redistributed. The objective of this study is to quantify savings achieved in power consumption and cooling capacity by the use of a regenerative braking system and compare them to the added costs of the electrical system for both natural and assured energy receptivity. GRA

**ASSURED ENERGY RECEPTIVITY PROGRAM, PHASE 1**

Aug 1975 127 p. Sponsored by Transit Develop Corp  
(PB-246245/5 TDC-AER-75-2) Avail NTIS HC \$6 00 CSCL 10B

Two methods for enhancing the receptivity of a transit system third rail power supply are examined for trains employing propulsion equipment capable of returning power to the third rail. During periods of heavy traffic accelerating trains will generally be present to absorb the power made available by braking trains. However, during periods of light traffic accelerating trains are not likely to be available on the line and other means must be provided to absorb the braking energy. Two methods for providing such a sink are: (1) addition of resistor banks on the wayside equipped with notching control to match resistance values and line requirements; (2) Addition of dc motor driven flywheel sets on the wayside to absorb the excess braking energy. GRA

(Contract EPA-68-02-1808)

(PB-245917/0 EPA-650/2-75-040) Avail NTIS HC \$4 50 CSCL 07D

The feasibility of using coal to produce electricity directly in a fuel cell that uses molten-carbonate electrolyte, a coal anode and an air cathode was studied. The cell voltage, the polarization of the anode, and the nature of the gaseous products formed were investigated. Electrodes made from charred coal yielded open-circuit voltages close to 1 V. At 975 K the activation plus concentration polarization was about 200 mV at current densities of 100 mA per sq cm and larger. At higher temperatures smaller polarizations were observed. The gaseous anode products were primarily CO<sub>2</sub> with some CO. Current efficiencies were somewhat less than 100 percent. The low values were possibly due to losses of anode gases by mechanical means. Coal ash added to the molten electrolyte did not appear to be deleterious to cell operation. Descriptions of possible future engineering systems and thermodynamic limitations are presented. GRA

Totally-illuminated multi-thin-layer (TI-MTL) iron-thionine (Fe-TH<sup>+</sup>) photogalvanic cells were constructed with SnO<sub>2</sub> and InSnO<sub>2</sub> respectively as transparent anode and cathode. A 07% sunlight engineering efficiency was achieved with a 4-element cell with 81 micrometer electrode separations. Single element TI-TL SnO<sub>2</sub>/Pt Fe-TH<sup>+</sup> cells were sealed by enclosure and decline in output with time identified as due to leaching of tin from the SnO<sub>2</sub> electrode. Reverse-bias experiments indicated that output of the TI-TL SnO<sub>2</sub>/Pt Fe-TH<sup>+</sup> cell is not limited by electrode

activation processes. Studies of dependence of cell output on electrode spacing indicate that bulk back reactions are the principle limiting factors. GRA

**A COMPARISON OF TWO NATURAL GAS FORECASTING MODELS TERA AND MACAVOY-PINDYCK**

10 Jun 1975 41 p refs

(PB-246219/0, FEA-EATR-75-15 FEA/B-75/639) Avail NTIS HC \$4 00 CSCL 21D

The supply side of two forecasting models of the natural gas industry, the MacAvoy-Pindyck and the TERA, were each simulated under the same wellhead price scenarios, and the factors causing differences in the forecasts identified. The two scenarios were continued. FPC regulation and phased deregulation. The models produce very different forecasts of the level of potential production. The analysis shows the divergence between the forecasts to be attributed primarily to conservative success ratios in the TERA model which are initialized in 1973 at 3.6%, (only 67% of the 1968-72) and the high success ratios in the other model which are initialized in 1972-73 values but rise to 15-20% values by 1980. **COMPARISON OF FEA FIGURES WITH INTERIOR COMMITTEE STAFF ANALYSIS OF THE PRESIDENT'S ENERGY PROGRAM**

5 Feb 1975 14 p

(PB-246209/1, FEA-EATR-75-3, FEA/B-75/645) Avail NTIS HC \$3 50 CSCL 21D

Results of an Interior Committee staff study which critiqued President Ford's energy program are compared with FEA figures and the differences in assumptions and methodology of analysis are compared. Both studies agree on the revenues resulting from the program; however, there is substantial disagreement in estimated costs. Major factors supporting the FEA figures are cited and the high estimates in the staff study are attributed to an underestimation of the number of households nationwide, the prediction of windfall profits to natural gas producers, and an overestimation of coal demand and rising coal prices. GRA

**THERMIC CONTROLS TO REGULATE SOLAR HEAT FLUX INTO BUILDINGS Semiannual Progress Report, 1 Jan - 30 Jun 1975**

Shawn Buckley 25 Aug 1975 50 p refs

(Grant NSF GI-43897)

(PB-246364/4 NSF/RANN/SE/GI-43897/PR-75-2,

NSF/RA/N-75-098) Avail NTIS HC \$4 00 CSCL 13A

The purpose of this project was to develop thermic controls for regulating solar heat flux into buildings. Thermics is a control discipline which uses temperature to directly control heat flow. Many independent panels replacing building walls and roof and controlled internally by thermic devices would perform three functions: (1) collect solar energy or dissipate internal heat; (2) control the flow of heat into and out of the panel; and (3) store heat inside the panel. The panel is to save heating costs in winter by absorbing solar energy and save airconditioning costs in summer by dissipating internal heat at night. A primary objective of the panel was to make its installed unit cost approximately that of conventional walls and roofs. Early research indicated that a switchable thermic diode was the most economic thermic control for use in the panel. GRA

**A BRIEF ANALYSIS OF THE IMPACT OF ENVIRONMENTAL LAWS OF ENERGY DEMAND AND SUPPLY**

Henri-Claude Bailly Penny Cushman and Alex Steinbergh Oct 1974 130 p refs

(Contract DI-14-01-0001-1628)

(PB-245656/4 RA-74-15 FEA/D-74/568) Avail NTIS HC \$6 00 CSCL 10A

Key environmental issues are identified. The energy impact of each of the issues is quantified and the relative importance of the impacts are evaluated. The 10 selected issues considered are classified in two ways: whether they tend to increase the demand or decrease the availability of energy; and at which point in the energy production/consumption cycle they primarily occur. In defining issues, several major Federal environmental laws are reviewed. Two base years and two forecast years are considered--the base years 1968 and 1973, and the forecast years 1975 and 1980. In evaluation of energy impacts, two sets of comparisons is taken into account: the energy impact of each environmental issue was compared with national energy usage in total and by fuel for the relevant two periods, and each issue was compared with nonenvironmental Federal policy impacts. **SILICON SCHOTTKY PHOTOVOLTAIC DIODES FOR SOLAR ENERGY CONVERSION Quarterly Progress Report, 1 Jun - 30 Sep 1975**

Wayne A Anderson Oct 1975 21 p refs

(Grant NSF AER-73-03197)

(PB-246154/9, NSF/RANN/SE/PR-75-3, NSF/RA/N-75-099) Avail NTIS HC \$3 50 CSCL 10A

A study has been made of many variables involved in Schottky solar cell fabrication. Cr metal and a thin oxide (5-10 Å) on the silicon are essential for a high open-circuit voltage. A (100) Si orientation is preferred to (111). Substrate resistivities of 0.2 to 2 ohm-cm produce equivalent solar cells. Various surface-preparation methods and heat-treatment techniques have not produced significant performance trends. Heating the vacuum system prior to evaporation has produced a fill factor of up to 0.75 and more consistent metal film resistance values. An apparent tunneling current component was identified through I-V and activation energy plots. Nb<sub>2</sub>O<sub>5</sub> offers improved antireflection properties compared to SiO<sub>2</sub>. Solar cell resistance seems to be controlled by internal effects at the Schottky barrier interface. GRA

**IMPACT OF THE PROPOSED ENERGY DEREGULATION/  
TAX PROGRAM ON SELECTED INDUSTRIES**

Apr 1975 80 p refs  
(PB-246207/5 FEA-EATR-75-10 FEA/B 75/647) Avail  
NTIS HC \$5.00 CSCL 10A

The effects of the energy conservation tax program on baseline fuel prices, fuel consumption by major sectors and on selected industries are examined. It was determined that the President's proposals would lead to higher fuel prices in 1975. However, the anticipated impact on energy sensitive industries should be less than the impact of the 1973-74 oil embargo. This is based on the assumption that elasticity of demand would be the major factor in determining absorption of or dollar for dollar pass through of higher fuel costs. Since fuel costs in most industries are small compared to labor and material costs, availability rather than price is the critical factor in the short run. GRA

The present day oil shortage has led to relaxation of some fuel restrictions allowing conversions from oil to coal and thereby increasing emissions of sulfur dioxide and particulates to the atmosphere. The purpose of this project was to evaluate the impact of the energy shortage on ambient sulfur dioxide (SO<sub>2</sub>) and total suspended particulate (TSP) concentrations in a major urban area, metropolitan Boston. A combined approach based on a statistical analysis of measured air quality data, regulatory and emission analysis and diffusion modeling of changes in ambient pollutant concentrations was used to attain this objective. (Grant AF-AFOSR-2517-73 AF Proj 9769)  
(AD-A015927 AFOSR-75-1337TR) Avail NTIS CSCL 12/1

It is shown that time-dependent periodic control can improve the fuel economy of vehicles in cruise. The time-dependent controls considered are relaxed steady-state (RSS) control, quasi-steady-state (QSS) control and quasi-relaxed steady-state (QRSS) control. Examples are given which show that QRSS control may give better performance than either RSS or QSS control. Properties of optimal cost functions (dependent on the minimum required average speed) are derived. The possibility or impossibility of improved performance through the use of QRSS, QSS and RSS control is investigated in terms of assumptions on the vehicle drag and fuel-consumption functions. GRA

The technical problems involved in converting a significant portion of a barrel of either a shale oil or coal syncrude into a suitable aviation turbine fuel were studied. TOSCO shale oil, H-Coal and COED coal syncrudes were the starting materials. They were processed by distillation and hydrocracking to produce two levels of yield (20 and 40 weight percent) of material having a distillation range of approximately 422 to 561 K (300 F to 550 F). The full distillation range 311 to 616 K (100 F to 650 F) materials were hydrotreated to meet two sets of specifications (20 and 40 volume percent aromatics, 13.5 and 12.75 weight percent H<sub>2</sub>, 0.2 and 0.5 weight percent S and 0.1 and 0.2 weight percent N). The hydrotreated materials were distilled to meet given end point and volatility requirements. The syntheses were carried out in laboratory and pilot plant equipment scaled to produce thirty-two 0.0757 cu m (2-gal) samples of jet fuel of varying defined specifications. Detailed analyses for physical and chemical properties were made on the crude starting materials and on the products. Author

**PHOTOCATALYTIC GENERATION OF HYDROGEN FROM WATER**

William R Bottoms and Richard B Miles In NASA Ames Res Center 2d NASA Conf on Laser Energy Conversion 1976 p 23-37 refs

CSCL 07D

A concept designed to overcome the problems encountered when using photodissociation for the generation of hydrogen is discussed The problems limiting the efficiency of photodissociation of water are the separation of the photolysis products and the high energy photons necessary for the reaction It is shown that the dissociation energy of a large number of molecules is catalytically reduced when these molecules are in intimate contact with the surface of certain metals It is proposed to develop a surface which will take advantage of this catalytic shift in dissociation energies to reduce the photon energy required to produce hydrogen This same catalytic surface can be used to separate the reaction products if it is made so that one of the dissociation products is soluble in the metal and others are not This condition is met by many metal systems such as platinum group metals which have been used commercially to separate hydrogen from other gases and liquids Author

Several large wind turbine projects have been initiated by  
NASA-Lewis as part of the ERDA wind energy program The  
projects consist of progressively large wind turbine ranging from  
100 kW with a rotor diameter of 125 feet to 1500 kW with  
rotor diameters of 200 to 300 feet Also included is supporting  
research and technology for large wind turbines and for lowering  
the costs and increasing the reliability of the major wind turbine  
components The results and status of the above projects are  
briefly discussed in this report In addition, a brief summary and  
status of the plans for selecting the utility sites for the experimental  
wind turbines is also discussed Author

Faculty Program 1975 Sponsored in part by FEA and ASEE  
(Grant NGT-01-003-044)

(NASA-CR-146859) Avail NTIS HC \$18 75 CSCI 10B

A methodology for a systems approach display and assess-  
ment of the potential for energy conservation actions and the  
impacts of those actions was presented The U S economy is  
divided into four sectors energy industry industry, residential/  
commercial and transportation Each sector is assessed with  
respect to energy conservation actions and impacts The four  
sectors are combined and three strategies for energy conserva-  
tion actions for the combined sectors are assessed The three  
strategies (national energy conservation, electrification and  
diversification) represent energy conservation actions for the near  
term (now to 1985), the mid term (1985 to 2000) and the far  
term (2000 and beyond) The assessment procedure includes  
input/output analysis to bridge the flows between the sectors  
and net economics and net energetics as performance criteria  
for the conservation actions Targets of opportunity for large net  
energy net energy savings and the application of technology to  
achieve these savings are discussed

## **N76-21687\* Auburn Univ Ala THE POLITICAL ECONOMY OF CONSERVATION**

In its ECASTAR Energy Conserv Sep 1975 10 p

CSCI 10B

A political economic purview of energy conservation in the  
United States was delineated The concepts of substitution and  
elasticity are distinguished and further distinctions are made

between short run price elasticity cross price elasticity, and available fund elasticity. An assessment of the role which cost factors can play in conservation is given. The structure of the petroleum industry and foreign petroleum resources is discussed. Also discussed is the role of government, industry and the consumer with the economic sphere. Author

**N76-21688\*** Auburn Univ Ala  
**CONSERVATION TOWARD FIRMER GROUND**  
*In its ECASTAR Energy Conserv Sep 1975 10 p*

CSCL 10B

The following aspects of energy conservation were discussed: conservation history and goals, conservation modes, conservation accounting-criteria and a method to overcome obstacles. The conservation modes tested fall into one of the following categories: reduced energy consumption, increased efficiency of energy utilization, or substitution of one or more forms of energy for another which is in shorter supply or in some sense thought to be of more value. The conservation accounting criteria include net energy reduction, economic and technical criteria. A method to overcome obstacles includes (approaches such as direct personal impact (life style, income security aspiration), an element of crisis, large scale involvement of environmental safety and health issues, connections to big government, big business, big politics, involvement of known and speculative science and technology, appeal to moral and ethical standards, the transient nature of opportunities to correct the system). Y J A

**N76-21690\*** Auburn Univ Ala  
**CONSERVATION IN THE ENERGY INDUSTRY**  
*In its ECASTAR Energy Conserv Sep 1975 11 p*

CSCL 10B

The basic energy supply and utilization problems faced by the United States were described. Actions which might alleviate the domestic shortfall of petroleum and natural gas are described, analyzed, and overall impacts are assessed. Specific actions included are coal gasification, in situ shale oil production, improved oil and gas recovery, importation of liquid natural gas, and deregulation of natural gas prices. These actions are weighed against each other as alternate techniques of alleviating or overcoming existing shortfalls. Author

**N76-21692\*** Auburn Univ Ala  
**ENERGY CONSERVATION AND THE TRANSPORTATION SECTOR**  
*In its ECASTAR Energy Conserv Sep 1975 26 p refs*

CSCL 10B

The present status of the energy implications of the transportation systems in the United States was illustrated with primary emphasis on the technologies and methods for achieving a substantial reduction in the associated energy price (approximately 25% of the nation's energy is consumed directly in the operation of these systems). These technologies may be classified as follows: (1) improvement of system efficiency (system operations or technological), (2) substitution for scarce energy resources (electrification, alternate fuels, use of man power, recycling), (3) curtailment of end use (managed population growth, rate education of citizenry, alternatives to personal transportation, improved urban planning, reduced travel incentives). Examples and illustrations were given. Thirty-four actions were chosen on the basis of a preliminary filtering process with the objective of (1) demonstrating a methodological approach to arrive at logical and consistent conservation action packages, (2) recommending a viable and supportable specific set of actions. Y J A

**N76-21693\*** Auburn Univ Ala  
**ENERGY CONSERVATION AND THE RESIDENTIAL AND COMMERCIAL SECTOR**  
*In its ECASTAR Energy Conserv Sep 1975 22 p refs*

CSCL 10B

A detailed analysis of energy conservation actions relevant to the residential and commercial sector has led to the conclusion that the potential for savings is great. The task will not be easy, however, since many of the actions require significant life style changes that are difficult to accomplish. Furthermore, many of the conservation actions cited as instant solutions to the energy crisis are those with only mid to long term potential, such as solar energy or heat pumps. Three significant conservation approaches are viable: adjusting price structure, mandating actions, and educating consumers. The first two appear to be the most feasible. But they are not without a price. Higher utility bills adversely affect the poor and the elderly on fixed incomes. Likewise, strict mandatory measures can be quite distasteful. But the effect of alternatives such as voluntary savings accomplished through education processes is minimal in a nation without a true conservation ethic. Author

**N76-21694\*** Auburn Univ Ala  
**INPUT-OUTPUT ANALYSIS OF SOME SECTOR ACTIONS**  
*In its ECASTAR Energy Conserv Sep 1975 16 p refs*

CSCL 10B

Selected energy conservation actions previously discussed in depth but separately in the areas of the energy industry, the industry sector, the transportation sector, and the residential and commercial sector were brought together and assessed as a group. Particular emphasis was devoted to identifying secondary or indirect impacts and multiple interactions. Preliminary results obtained from the ECASTAR energy input-output model suggest that the impacts of energy conservation actions can be grossly misrepresented if secondary impacts are not included in the assessment. A methodology which stresses the importance of secondary and multiple interactions permeates the underlying philosophy of this discussion. Author

**N76-21695\*** Auburn Univ Ala  
**NATIONAL ENERGY CONSERVATION**  
*In its ECASTAR Energy Conserv Sep 1975 33 p refs*

CSCL 10B

A set of energy conservation actions that cut across all sectors of the economy were analyzed so that all actions under consideration be analyzed systematically and as a whole. The actions considered were as follows: (1) roll back the price of newly discovered oil, (2) freeze gasoline production for 3 years at 1972 levels, (3) mandate automobile mileage improvements, (4) require industry to improve energy efficiency, (5) require manufacture of household appliances with greater efficiency, (6) force conversion of many power plants from gas and oil to coal. The results showed that considerable gas and oil would be saved by forcing switches to coal. However, the large scale switch to coal was shown to require greatly increased outputs from many other industries that in turn require more energy. It was estimated that nearly 2.5 quads of additional coal were needed to produce these additional requirements. Also, the indirect requirements would create more jobs. Author

**N76-21696\*** Auburn Univ Ala  
**ELECTRIFICATION**  
*In its ECASTAR Energy Conserv Sep 1975 25 p refs*

CSCL 10B

Electrification was chosen for an assessment of conservation impact because it is almost the sole consumer of coal and nuclear power, and because electrical end use can be made to have higher overall efficiency than many present direct fuel uses. The important actions within electrification that were examined are those with the greatest impacts (coal and nuclear), the greatest technological requirements (peak shaving and transmission), and the greatest response from the decision makers (economic health and growth of utilities in an era of increasing energy costs). A list of recommendations relating to the study of electrification was given. Author

**N76-21697\*** Auburn Univ Ala  
**DIVERSIFICATION OF ENERGY SOURCES**  
*In its ECASTAR Energy Conserv Sep 1975 15 p refs*

CSSL 10B

The concept of energy source diversification was introduced as a substitution conservation action. The current status and philosophy behind a diversification program is presented in the context of a national energy policy. Advantages/disadvantages (constraints) and methods of implementation for diversification are discussed. The energy source systems for diversification are listed and an example impact assessment is outlined which deals with the water requirements of the specific energy systems.

Author

**N76-21699\*** Auburn Univ Ala  
**ECASTAR SUMMARY AND RECOMMENDATIONS**  
*In its ECASTAR Energy Conserv Sep 1975 13 p*

CSSL 10B

A methodology was presented for a systems approach to energy conservation where conservation was depicted as the result of any action that improves the energy situation of the United States in the present and near future. The relevant constraints and criteria and their application were discussed. Among the most important are the present (capitalistic) structure of the American economy, the lead times necessary for implementation of relevant technologies, and the desire of most policymakers to maintain a reasonable standard of living with a reasonable amount of invulnerability to foreign discretion. The objective of the design group was the assessment of the potential and impact of conservation action in the United States. The U.S. economy was divided into four sectors: energy, industry, residential/commercial, and transportation. Each sector was analyzed for conservation actions and their impacts. The sector analysis was characterized as the system design or construction phase.

 Lewis Research Center Cleveland Ohio  
**THE COMPUTER SIMULATION OF AUTOMOBILE USE PATTERNS FOR DEFINING BATTERY REQUIREMENTS FOR ELECTRIC CARS**  
 Harvey J Schwartz 1976 13 p refs. To be presented at the 4th Intern Elec Vehicle Symp Dusseldorf 31 Aug - 2 Sep 1976 sponsored by Intern Union of Producers and Distributors of Elec Energy  
 (NASA-TM-X-71900 E-8689) Avail NTIS HC \$3.50 CSSL 10C

A Monte Carlo simulation process was used to develop the U.S. daily range requirements for an electric vehicle from probability distributions of trip lengths and frequencies and average annual mileage data. The analysis shows that a car in the U.S. with a practical daily range of 82 miles (132 km) can meet the needs of the owner on 95% of the days of the year or at all times other than his long vacation trips. Increasing the range of the vehicle beyond this point will not make it more useful to the owner because it will still not provide intercity transportation. A daily range of 82 miles can be provided by an intermediate battery technology level characterized by an energy density of 30 to 50 watt-hours per pound (66 to 110 W-hr/kg). Candidate batteries in this class are nickel-zinc, nickel-iron, and iron-air. The implication of these results for the research goals of far-term battery systems suggests a shift in emphasis toward lower cost and greater life and away from high energy density.

As part of the Energy Research and Development Administration (ERDA) wind-energy program, NASA Lewis Research Center has designed and built an experimental 100-kW wind turbine. The two-bladed turbines drive a synchronous alternator that generates its maximum output of 100 kW of electrical power in a 29-km/hr (18-mph) wind. The design and assembly of the wind turbine were performed at Lewis from components that were procured from industry. The machine was installed atop the tower on September 3, 1975.

 (BNL 20444 Conf-750950-1) Avail NTIS HC \$5.25

The particular system under design consists of flexible cables installed in a cryogenic enclosure at room temperature and cooled to the range 6 to 9 K by supercritical helium. Contraction of the cable is accommodated by proper choice of helix angles of the components of the cable. The superconductor is Nb<sub>3</sub>Sn and at the present time the dielectric insulation is still the subject of intensive development. Two good choices appear to be forms of polyethylene and polycarbonate. Sample cables incorporating various dielectrics have been manufactured commercially in lengths of 1500 ft and tested in laboratory cryostats in shorter sections of about 70 ft. A test facility is under construction to evaluate cables and cryogenic components for this type of service. The first refrigerator uses a 350 HP screw compressor and three turbo-expander stages. It is hoped to achieve reliability of a very high order. The first three-phase tests will be conducted at 69 kV although it appears that 230 to 345 kV is the most likely voltage range for future applications.

 (ERDA-39) Avail NTIS HC \$5.45

The role of the research program in controlled thermonuclear research, the activities that are contained within the research program, and summaries of the reports prepared by the study groups that analyzed the six activity areas that make up the research program are described. The recommendations by an overview panel are given. The recommendations are based on an analysis of the individual study group reports, consultations with CTR staff and field scientists, and on dependent review of CTR program plans and needs. In some cases the recommendations of the overview panel are identical with study group recommendations and in other cases they are not. Some recommendations by the overview panel take into account factors in information that go beyond that available to the study groups. The five year budget needed to accomplish the recommended research program is discussed.

For the first time since 1946 the total electricity supply in 1974 did not increase appreciably over the preceding year Two simple historical growth models are used to evaluate the significance of this occurrence One relates total electricity made available to aggregate economic activity (real GNP) and the other relates it to the passage of time In both models electricity supply is highly correlated with the independent variable On the basis of the economic model there is no reason to believe

that the rate of long-term growth of electricity relative to real GNP has declined in fact, the contrary is indicated Use of the other model in which time is the independent variable, leads to exactly opposite conclusions GRA

Urban solid wastes contain significant quantities of energy that can be reclaimed Biological conversion of the organic refuse to methane by anaerobic fermentation is one mechanism by which this energy can be reclaimed The results are given of an investigation of refuse fermentation at a thermophilic operating temperature of 60C of dewatering of the fermentor residue by vacuum filtration and of pretreatment of the refuse by a hot-caustic process Treatment requirements for the centrate-filtrate produced by dewatering of the residue are presented

Estimates are provided for bituminous coal and lignite production consumption and end-of-year stocks for 1975 through 1980. The report discusses the approach and data base used to develop the projections of 1975-1980 production consumption and stock levels. Estimates the price impacts of these projections and discusses the uncertainties and sensitivities inherent in the projections. GRA

(PB-247679/4 UIUC-CAC-DN-75-163B NSF/RA/N-75-037B) Avail NTIS HC \$4 00 CSDL 18E

Energy costs of mining preparing reprocessing and disposing of fuel for an average 1 000 MWe nuclear power plant are discussed. This model plant is assumed to average one boiling water reactor (BWR) and two pressurized water reactors (PWR). The energy cost of materials needed to construct a boiling water reactor plant is also discussed. GRA

**N76-21736#** Nevada Bureau of Mines and Geology Reno **EVALUATION OF GEOTHERMAL ACTIVITY IN THE TRUCKEE MEADOWS, WASHOE COUNTY NEVADA**

Richard L Batemen and R Bruce Scheibach 1975 46 p refs  
Prepared in cooperation with Nevada Univ Reno  
(Contract DI-14-31-0001-4028)  
(PB-247297/5 NBMG-25 W76-01683) Avail NTIS HC \$4 00 CSDL 08G

Probable effects of thermal waters on overall ground-water conditions under a pattern of increasing development within the basin are estimated. All chemical quality and temperature data for thermal and nonthermal ground waters were assembled and subjected to various forms of analysis. Results were used to precisely delineate areas of geothermal occurrence and assess the probable results of induced mixing of poor-quality thermal and good-quality nonthermal ground waters. Past and present use of the local geothermal resource were inventoried and evaluated. The most frequent present use is for single residence heating employing geothermal wells and simple heat exchange systems. GRA

**RANN UTILIZATION EXPERIENCE CASE STUDY NO 15 NEW TECHNIQUES FOR GASIFYING COAL**

A Squires 1975 31 p refs Prepared in cooperation with City Univ of New York  
(Grant NSF C-927)  
(PB-247259/5 NSF/RA/G-75-043) Avail NTIS HC \$4 00 also available in complete report and summary PB-247243 HC \$13 00 CSDL 07A

Since the use of fuel gas lessens the particulate pollution associated with the combustion of coal improved methods of coal gasification are a high priority national need. The specific objectives of this project are to provide a technical basis for pilot scale activities by industry on fast fluidized beds and agglomerating fluidized beds that either react coal with hydrogen or gasify coal or coke with air and steam. Dissemination of the research results is discussed. GRA

**REPORT ON A WORKSHOP FOR ENERGY CONSERVATION IN SOUTHEAST INDUSTRIAL PLANTS Final Report**

E W Kopp 30 Jun 1975 55 p  
(Grant NSF ENG-75-03005)

(PB-246651/4 NSF/ENG-75-03005) Avail NTIS HC \$4 50 CSDL 10A

The objective was to identify research areas which should lead to a more efficient use of energy in industrial and commercial plant operations. The program was designed to define the state-of-the-art of energy use in such industrial facilities by means of case study presentations and descriptions of ongoing research activities having potential for energy conservation in industrial plants. Results of the workshop regarding solutions to existing problems and identification of needed research are also reviewed. GRA

**TRANSPORT OF MASS AND ENERGY IN POROUS MEDIA DUE TO NATURAL CONVECTION THE GEOTHERMAL BASIN PROBLEM Progress Report**

D R Kasoy 26 Mar 1975 20 p refs  
(Grant NSF AER-74-03429)  
(PB-247087/0 CUMER-75-2 NSF/RA/N-75-118 PR-1) Avail NTIS HC \$3 50 CSDL 08G

Geological and geophysical field data are used to develop plausible models of the energy-mass transport systems in geothermal anomalies. The basic describing equations for saturated thermally-active elastic porous media are discussed in the context of modelling physical processes occurring in the geothermal environment. Progress in code development is considered. Calculations for heat and mass transport due to natural convection in model systems are described. The importance of using variable fluid properties is emphasized. GRA

**ELECTRIC POWER TRANSMISSION AND DISTRIBUTION SYSTEMS COSTS AND THEIR ALLOCATION**

Martin L Baughman and Drew J Bottaro Jul 1975 45 p refs  
(Grant NSF SIA-73-07871 A02)  
(PB-247141/5 MIT-EL 75-020) Avail NTIS HC \$4 00 CSDL 10B

The costs derived from installing operating and maintaining the transmission and distribution system have historically comprised about 2/3 the total costs of producing and delivering electricity to residential commercial customers and over 1/3 the total costs of supplying electricity to large industrial customers. This paper estimates the costs of transmission and distribution for nine regions of the United States for the above two customer classes. These costs are detailed for six categories of equipment used in the transmission and distribution system and the contribution to the total cost of each equipment category is determined. GRA

**N76-21741#** Little (Arthur D.) Inc Cambridge Mass **ASSESSMENT OF FUELS FOR POWER GENERATION BY ELECTRIC UTILITY FUEL CELLS Final Report**

R P Stickles G C Sweeney P E Mawn and J M Parry Oct 1975 320 p refs Sponsored by Elec Power Res Inst (PB-247216/5 EPRI-318-FR) Avail NTIS HC \$9 75 CSDL 10B

The relative cost of fuel supply options for the production and distribution of fuels suitable for fuel cells was assessed including the supply alternatives of hydrogen synthetic gas (hydrogen/carbon monoxide) methanol naphtha and raw energy sources for conversion to product fuels-petroleum natural gas coal and municipal solid waste. Comparative economics of fuel cell power systems from raw of primary fuel to electricity were developed based on forecasted energy prices for 1978 1990. The integration of on-site fuel conversion with the fuel cell power sections was considered to utilize waste heat and water from the stack. The integration of coal gasifiers with fuel cell plants was also investigated. GRA

# SUBJECT INDEX

ENERGY / A Continuing Bibliography (Issue 10)

JULY 1976

## Typical Subject Index Listing

The subject heading is a key to the subject content of the document. The title or title and title extension provides the user with a brief description of the subject matter. The report number helps to indicate the type of document cited (e.g. NASA report translation, NASA contractor report). The issue page and accession numbers are located beneath and to the right of the title e.g. 09 p0028 N76 13595. Under any subject heading the accession numbers are arranged in sequence with the IAA accession numbers appearing first.

of Standards joint emergency workshop on Energy  
Conservation in Buildings  
[COM-75-10766/4] 09 p0021 N76-11567

Technology utilization house study report --- for  
energy conservation  
[NASA-CR-144896] 09 p0028 N76-13595

Assessment of solar-powered cooling of buildings  
--- energy policy  
[PB-243455/3] 09 p0029 N76-13608

Thermal response and model of heating and cooling  
equipment for residential homes --- mathematical  
models of energy requirements  
[PB-244991/6] 10 p0071 N76-16631

Heat transfer models and energy needs for  
residential homes  
[PB-244992/4] 10 p0071 N76-16634

Thermal controls to regulate solar heat flux into  
buildings  
[PB-246364/4] 10 p0087 N76-20675

Energy conservation and the residential and  
commercial sector  
10 p0092 N76-21693

## C

### CADMIUM SULFIDES

Performance of Cu/x/S-CdS solar cells after  
additional Cu-treatment  
09 p0013 A76-14790

Evaluation of CdS solar cells as future contender  
for large scale electricity production  
09 p0013 A76-14792

Preparation and properties of InP/CdS and  
CuInSe2/CdS solar cells  
09 p0014 A76-14796

Assessment of the international workshop on CdS  
solar cells  
09 p0014 A76-14798

Preparation and properties of InP/CdS solar cells  
10 p0051 A76-21472

Degradation of the characteristics of the  
thin-film photovoltaic cell Cu/x/S-CdS  
10 p0056 A76-24943

Assessment of the international workshop on CdS  
solar cells  
09 p0024 N76-12489

Direct solar energy conversion for large scale  
terrestrial use  
09 p0024 N76-12492

Direct solar energy conversion for large scale  
terrestrial use  
[PB-242732/6] 09 p0025 N76-12516

Direct solar energy conversion for large scale  
terrestrial use. The CdS/Cu2S heterojunction in  
steady state  
[PB-246710/8] 10 p0088 N76-20684

### CADMIUM TELLURIDES

A new look at CdTe solar cells --- energy  
conversion efficiency computation  
09 p0013 A76-14795

### CALDERAS

The near-surface hydrothermal regime of Long  
Valley caldera  
10 p0053 A76-22112

Geothermal setting and simple heat conduction  
models for the Long Valley caldera  
10 p0053 A76-22113

Convective heat flow from hot springs in the Long  
Valley caldera, Mono County, California  
10 p0053 A76-22114

### CALIFORNIA

Potential pumped storage projects in the Pacific  
Southwest  
[PB-242798/7] 09 p0030 N76-13625

Energy alternatives for California: Paths to the  
future  
[R-1793-CSA/RP] 10 p0083 N76-20638

Energy alternatives for California: Paths to the  
future, executive summary  
[R-1793/1-CSA/RP] 10 p0084 N76-20639

### CARBON DIOXIDE LASERS

A possible application of electric discharge CO2  
lasers for laser thermonuclear fusion  
10 p0048 A76-20559

### CARRIER MOBILITY

A study of efficiency in low resistivity silicon  
solar cells  
10 p0045 A76-19022

### CATALYTIC ACTIVITY

Photocatalytic generation of hydrogen from water  
10 p0090 N76-21508

## CELL ANODES

Tungsten trioxide as a photoanode for a photoelectrochemical cell /PEC/ --- in solar energy conversion

10 p0062 A76-26689

## CEMENTES

Energy conservation potential in the cement industry [PB-245159/9]

10 p0071 N76-16630

## CESIUM PLASMA

Closed cycle MHD power generation experiments using a helium-cesium working fluid in the NASA Lewis Facility [NASA-TM-X-71885]

10 p0091 N76-21679

## CHANNEL FLOW

Investigation of the optimal characteristics of a magnetohydrodynamic generator for an open-cycle combination magnetohydrodynamic electric-power plant --- using one dimensional channel flow model

09 p0009 A76-14108

Investigation of some factors, limiting enthalpy extraction of MHD-generators

09 p0016 A76-17060

Experimental study of heat transfer in the channel of an open-cycle magnetohydrodynamic generator

10 p0050 A76-21041

New developments in the area of magnetohydrodynamic current generators [AD-A017803]

10 p0094 N76-21721

## CHARGE TRANSFER

Electrostatic wind energy conversion --- using charge transfer via gas flow

09 p0006 A76-13141

## CHEMICAL ENERGY

The conversion of energy in chemical reactions

10 p0057 A76-25391

Conversion of laser energy to chemical energy by the photoassisted electrolysis of water

10 p0090 N76-21507

## CHEMICAL FRACTIONATION

Gasification gases of coke, coal, benzol, and petroleum and cracking products of natural gas with air-water vapor mixtures

10 p0057 A76-25224

## CHEMICAL REACTIONS

The conversion of energy in chemical reactions

10 p0057 A76-25391

Ispra Mark-10 water splitting process

09 p0037 N76-15580

## CIRCUITS

Systems of cybernetic simulation of power systems --- models of power supplies and circuits, energy policy

[BLL-CB-TRANS-6723-(9022.09)] 09 p0032 N76-14597

## CITIES

Effects of energy shortages on the way we live --- fuel consumption/cities - energy policy

[AD-A010938] 09 p0019 N76-10576

Technical aspects of efficient energy utilization: 1974 summer study of the American Physical Society

--- energy policy and technology assessment of energy technology for cities and residential areas

[PB-243116/1] 09 p0030 N76-13628

The impact of and potential for energy conservation practices in residential and commercial buildings in Texas --- energy policy

[PB-243323/3] 09 p0033 N76-14617

## CIVIL AVIATION

The economic impact of energy shortages on commercial air transportation and aviation manufacture. Volume 1: Impact analysis

[PB-246271/1] 10 p0074 N76-18089

The economic impact of energy shortages on commercial air transportation and aviation manufacture. Volume 2: Aviation industries profiles and energy usage characteristics

[PB-246272/9] 10 p0074 N76-18090

## CLIMATOLOGY

Space monitoring of the thermal impact of energy use

09 p0015 A76-15660

## CLOSED CYCLES

A general review of closed-cycle gas turbines using fossil, nuclear and solar energy --- Book

10 p0047 A76-20098

Closed cycle MHD power generation experiments using a helium-cesium working fluid in the NASA Lewis Facility

[NASA-TM-X-71885] 10 p0091 N76-21679

## COAL

Thermodynamic analysis of a coal fired MHD power cycle with chemical heat regeneration

09 p0016 A76-17057

Multiscale aerial and orbital techniques for management of coal-mined lands

10 p0046 A76-19583

A net energy analysis of the use of Northern Great Plains surface mined coal in load center power plants

10 p0058 A76-25929

Economic analysis of coal supply: An assessment of existing studies

[PB-243220/1] 09 p0027 N76-13575

Importing fuels and petrochemical raw materials for Texas

[PB-243322/5] 09 p0027 N76-13584

Energy information reported to congress: As required by Public Law 930319, First Quarter 1975

[PB-242760/0] 09 p0027 N76-13587

Texas energy scenarios

[PB-243357/1] 09 p0029 N76-13617

Western coal development and utilization. A policy oriented, selected bibliography with abstracts

[PB-244271/3] 09 p0032 N76-14590

Resources and utilization of Texas lignite

[PB-243343/1] 09 p0034 N76-14622

Analysis of steam coal sales and purchases

[PB-243575/8] 09 p0034 N76-14631

The reserve base of coal for underground mining in the western United States

[PB-244909/8] 09 p0036 N76-15569

A computerized information system on the impacts of coal fired energy development in the Southwest

09 p0036 N76-15571

Operations study of selected surface coal mining systems in the United States

[PB-245085/6] 10 p0070 N76-16610

Potential for conversion to coal as a fuel by major fuel users in the Pennsylvania counties of Bucks, Chester, Delaware, Montgomery and Philadelphia

[PB-244946/0] 10 p0072 N76-16642

Demand for coal for electricity generation 1975 - 1984

[PB-245216/7] 10 p0077 N76-18685

Assessment of industrial energy options based on coal and nuclear systems

[ORNL-4995] 10 p0079 N76-19565

Federal energy management program, fiscal year 1975

[PB-246314/9] 10 p0079 N76-19566

Energy information reported to Congress as required by public law 93-319, second quarter 1975

--- coal, natural gas, crude oil, nuclear energy, electricity

[PB-242760/02] 10 p0081 N76-19583

Comparison of FEA figures with Interior Committee staff analysis of the President's energy program

[PB-246209/1] 10 p0087 N76-20674

Synthesis and analysis of jet fuels from shale oil and coal syncrudes

[NASA-TM-X-73399] 10 p0089 N76-21341

Reserve and resource estimation, appendix D

[PB-248063/0] 10 p0090 N76-21670

## COAL GASIFICATION

A methodology for assessing reliability of coal conversion plants

[AAS PAPER 75-293] 09 p0005 A76-12841

The manufacture of hydrogen from coal

[SAE PAPER 751095] 10 p0053 A76-22313

Gasification gases of coke, coal, benzol, and petroleum and cracking products of natural gas with air-water vapor mixtures

10 p0057 A76-25224

Coal conversion technology --- Book

10 p0062 A76-27125

Development of information for standards of performance for the fossil fuel conversion industry

[PB-242543/7] 09 p0025 N76-12514

Hydrogen from coal

09 p0037 N76-15576

Production of hydrogen by direct gasification of coal with steam using nuclear heat

09 p0037 N76-15577

Hydrogen manufacture by Lurgi gasification of Oklahoma coal

09 p0037 N76-15578

- Process description**  
 Fuels technology: A state-of-the-art review  
 [PB-242535/3] 09 p0037 N76-15582  
 Methanol production from coal, section 1  
 [PB-246201/8] 10 p0085 N76-20659  
 Evaluation of pollution control in fossil fuel  
 conversion processes. Coal treatment. Section  
 1: Meyers process

- An analysis identifying issues in the fiscal year 1976 ERDA budget --- Congressional reports - energy policy and federal budgets for energy technology [GPO-48-010] 09 p0043 N76-15922
- Economic impact of President Ford's energy program [GPO-48-736] 09 p0043 N76-15925

# SUBJECT INDEX

# COPPER SULFIDES

Outer Continental Shelf Lands Act amendments and Coastal Zone Management Act amendments, part 2 [GPO-51-748] 09 p0043 N76-15928

US international energy policy [GPO-53-813] 10 p0071 N76-16625

Basic energy data and glossary of terms [GPO-53-220] 10 p0071 N76-16626

Authorizing appropriations for the Energy Research and Development Administration for fiscal year 1976 and for the transition quarterly ending 30 September, 1976 --- Congressional reports, energy policy [S-REPT-94-104] 10 p0071 N76-16627

Federal involvement in the development of eastern oil and gas shale [GPO-54-728] 10 p0071 N76-16628

Hydrogen [GPO-62-332] 10 p0073 N76-17644

The economic impact of environmental regulations [GPO-51-795] 10 p0074 N76-18000

Small business and the energy shortage, volume 1 [GPO-99-720] 10 p0075 N76-18644

Small business and the energy shortage, volume 2 [GPO-40-890] 10 p0075 N76-18645

Analysis of energy supply, conservation, and conversion [GPO-55-802] 10 p0077 N76-18681

Analysis of energy supply, conservation, and conversion [GPO-55-800] 10 p0077 N76-18682

Energy labeling and disclosure [GPO-51-440] 10 p0077 N76-18683

Outer Continental Shelf Management Act of 1975 [S-REPT-94-284] 10 p0078 N76-19001

Energy Conservation and Oil Policy Act of 1975 [H-REPT-94-340] 10 p0078 N76-19004

Potential heating oil shortages [GPO-24-027] 10 p0079 N76-19562

Energy information reported to Congress as required by public law 93-319, second quarter 1975 --- coal, natural gas, crude oil, nuclear energy, electricity [PB-242760/02] 10 p0081 N76-19583

ERDA authorization, part 5, 1976 and transition period [GPO-50-274] 10 p0081 N76-20027

Atomic energy legislation through 93rd Congress, 2nd Session [GPO-49-939] 10 p0081 N76-20029

Energy-related research and development [GPO-51-189] 10 p0083 N76-20630

Industry efforts in energy conservation [GPO-35-814] 10 p0083 N76-20636

Fiscal policy and the energy crisis, part 4 [GPO-28-243] 10 p0083 N76-20637

Solar power from satellites [GPO-66-608] 10 p0091 N76-21680

Energy facts, 2 [GPO-53-136] 10 p0091 N76-21684

**CONSTRUCTION**

Technology utilization house study report --- for energy conservation [NASA-CR-144896] 09 p0028 N76-13595

**CONSTRUCTION MATERIALS**

Material and manufacturing considerations for vertical-axis wind turbines 09 p0014 A76-15163

Materials considerations 10 p0076 N76-18667

**CONSUMERS**

Citizen's actions 09 p0023 N76-12471

**CONTINENTAL SHELVES**

Outer Continental Shelf Lands Act amendments and Coastal Zone Management Act amendments, part 2 [GPO-51-748] 09 p0043 N76-15928

Outer Continental Shelf Management Act of 1975 [S-REPT-94-284] 10 p0078 N76-19001

**CONTROL EQUIPMENT**

Control for nuclear thermionic power source --- power supply circuits, energy policy [NASA-CASE-RPO-13114-2] 09 p0037 N76-15573

**CONTROL THEORY**

Periodic control of vehicle cruise: Improved fuel economy by high and low frequency switching --- mathematical models of aircraft control during cruising flight for aircraft fuel consumption reduction [AD-A015927] 10 p0089 N76-20886

## CONTROLLED FUSION

The technological requirements for power by fusion 09 p0004 A76-11846

Laser plasmas and nuclear energy --- Book 09 p0006 A76-13084

Progress in laser-solenoid fusion 09 p0009 A76-14163

The energy crisis and a potential laser-fusion solution 10 p0046 A76-19400

Laser thermonuclear fusion in the energetics of the future 10 p0047 A76-19917

The basic technical characteristics of the demonstration tokamak fusion reactor /the T-20 device/ 10 p0047 A76-19918

Some questions associated with hybrid thermonuclear reactors 10 p0047 A76-19919

A possible application of electric discharge CO2 lasers for laser thermonuclear fusion 10 p0048 A76-20559

Tokamaks --- review 10 p0055 A76-24748

Some basic energy and economic considerations for a laser ignited fusion reactor 10 p0059 A76-26069

Superconducting magnets in the world of energy, especially in fusion power 10 p0063 A76-27699

## CONVECTIVE HEAT TRANSFER

Convective heat flow from hot springs in the Long Valley caldera, Mono County, California 10 p0053 A76-22114

Transport of mass and energy in porous media due to natural convection. The geothermal basin problem [PB-247087/0] 10 p0096 N76-21739

## COOLING SYSTEMS

Temperature control for solar heating and cooling of buildings [AAS PAPER 75-105] 09 p0003 A76-11281

Application of optimization techniques to solar heating and cooling [AAS PAPER 75-108] 09 p0003 A76-11338

A solar heat pump 09 p0009 A76-14093

Performance measurement of a large scale solar heating and cooling system 09 p0009 A76-14521

Solar heating and cooling 09 p0017 A76-18388

The design requirements for a viable photochemical solar heating and cooling system 10 p0049 A76-20845

Low cost solar augmented heat pump system for residential heating and cooling [ASME PAPER 75-WA/SOL-7] 10 p0052 A76-21975

Solar energy for heating and cooling of buildings --- Book 10 p0063 A76-27896

Modifications to the Lockheed-Huntsville solar heating and cooling systems simulation program [PB-244174/9] 09 p0040 N76-15622

Solar heating and cooling in buildings, methods of economic evaluation 09 p0041 N76-15633

Proceedings of the workshop on Solar Collectors for Heating and Cooling of Buildings [PB-243908/1] 09 p0041 N76-15634

Lighting and thermal operations. Energy management action program for commercial-public-industrial buildings [PB-245047/6] 10 p0072 N76-16650

Heat Pipe Technology: A bibliography with abstracts [NASA-CR-146328] 10 p0074 N76-18372

Heat Pipe Technology: A bibliography with abstracts [NASA-CR-146329] 10 p0074 N76-18373

NBSID, computer program for heating and cooling loads in buildings [PB-246184/6] 10 p0088 N76-20686

**COPPER SULFIDES**

Performance of Cu<sub>x</sub>S-CdS solar cells after additional Cu-treatment 09 p0013 A76-14790

Assessment of the international workshop on CdS solar cells 09 p0024 N76-12489

## COST ANALYSIS

## SUBJECT INDEX

- Direct solar energy conversion for large scale terrestrial use. The CdS/Cu<sub>2</sub>S heterojunction in steady state  
[PB-246710/8] 10 p0088 N76-20684
- COST ANALYSIS**  
Business analysis of solar photovoltaic energy conversion  
09 p0011 A76-14758
- Solar thermal power system based on optical transmission  
10 p0060 A76-26146
- NECAP: NASA's Energy-Cost Analysis Program. Part 1: User's manual  
[NASA-CR-2590-PT-1] 09 p0020 N76-10751
- NECAP: NASA's Energy-Cost Analysis Program. Part 2: Engineering manual  
[NASA-CR-2590-PT-2] 09 p0020 N76-10752
- Laser fusion: Capital cost of inertial confinement [UCRL-76546] 09 p0020 N76-11427
- Assessment of a single family residence solar heating system in a suburban development setting. Solar heated residence technical research experiment  
[PB-242729/2] 09 p0025 N76-12520
- Analysis of steam coal sales and purchases [PB-243575/8] 09 p0034 N76-14631
- Production cost methods and data 10 p0076 N76-18665
- Electric power transmission and distribution systems: Costs and their allocation [PB-247189/4] 10 p0094 N76-21718
- The vulnerability of crop production to energy problems [PB-247756/0] 10 p0095 N76-21726
- The coal future: Economic and technological analysis of initiatives and innovations to secure fuel supply independence, appendix B --- nuclear power plants [PB-247679/4] 10 p0096 N76-21735
- Electric power transmission and distribution systems: Costs and their allocation [PB-247141/5] 10 p0096 N76-21740
- COST EFFECTIVENESS**  
The 1974 energy crisis - A perspective - The effect on commercial aircraft design  
09 p0001 A76-10391
- The effect of the energy crisis on economic regulation of the air transport industry  
09 p0001 A76-10392
- Solar house system interfaced with the power utility grid  
09 p0004 A76-11699
- Airline profit pinch clouds harvest of gains --- lower-cost fuel-efficient transport technology  
09 p0005 A76-12159
- Economic viability of large wind generator rotors  
09 p0006 A76-13675
- Performance and structural design aspects of a one-bladed electric-power-generating windmill  
09 p0010 A76-14620
- Solar heating and cooling  
09 p0017 A76-18388
- Bringing logic to urban transportation innovation --- adaptation of automated guideway systems  
10 p0050 A76-21141
- Low cost solar augmented heat pump system for residential heating and cooling [ASME PAPER 75-WA/SOL-7] 10 p0052 A76-21975
- Miles of coatings for solar applications  
10 p0055 A76-24044
- Economic fueling of L.A. transportation in the post-fossil era  
10 p0063 A76-27801
- Design, economic and system considerations of large wind-driven generators  
10 p0063 A76-27900
- Some marketing and technical considerations of wind power  
10 p0065 A76-28233
- Wind energy - Cost effectiveness is the key  
10 p0066 A76-28247
- Energy management case histories [PB-246763/7] 10 p0088 N76-20689
- COST ESTIMATES**  
The necessity of fission power  
09 p0015 A76-16541
- Cost and size estimates for an electrochemical bulk energy storage concept  
09 p0017 A76-18505
- Cost of paraboloidal collectors for solar to thermal electric conversion  
10 p0049 A76-20843
- An overall program for the development of open cycle MHD power generation  
[PB-242585/8] 09 p0022 N76-11585
- Energy cost of goods and services, 1963 and 1967 [PB-242670/8] 09 p0026 N76-12889
- Ocean thermal energy conversion research on an engineering evaluation and test program. Volume 4: Test program plan  
[PB-246181/2] 10 p0079 N76-19568
- COST REDUCTION**  
Reduction of wind powered generator cost by use of a one bladed rotor  
10 p0065 A76-28235
- COSTS**  
Impact of the proposed energy deregulation/tax program on selected industries  
[PB-246207/5] 10 p0089 N76-20693
- CROP GROWTH**  
The vulnerability of crop production to energy problems

## SUBJECT INDEX

## ENERGY CONVERSION EFFICIENCY

Minimum energy, liquid hydrogen supersonic cruise vehicle study  
[NASA-CR-137776] 10 p0072 N76-17101

Alternative energy sources for United States Air Force installations  
[AD-A014858] 10 p0073 N76-17649

Future hydrogen use 10 p0075 N76-18655

Factors affecting the broadened use of hydrogen 10 p0076 N76-18661

Future US energy demands based upon traditional consumption patterns lead to requirements which significantly exceed domestic supply 10 p0078 N76-18972

Energy use patterns in metallurgical and nonmetallic mineral processing. Phase 4: Energy data and flowsheets, high-priority commodities  
[PB-245759/6] 10 p0080 N76-19576

Comparison of energy consumption between West Germany and the United States  
[PB-245652/3] 10 p0080 N76-19577

Energy use patterns in metallurgical and nonmetallic mineral processing. Phase 5: energy data and flowsheets, intermediate-priority commodities  
[PB-246357/8] 10 p0081 N76-20371

United States energy through the year 2000, revised 10 p0083 N76-20635

Energy balance for the Washington metropolitan area for 1973  
[PB-245391/8] 10 p0084 N76-20644

Energy versus the environment: The issues  
[PB-246382/6] 10 p0087 N76-20681

Conference on Interdependence Between Energy and Economic Growth  
[PB-246757/9] 10 p0088 N76-20683

Energy consumption: Fuel utilization and conservation in industry  
[PB-246888/2] 10 p0088 N76-20688

Input-output analysis of some sector actions 10 p0092 N76-21694

Energy requirements in Minnesota iron ore and taconite mining 1953 - 2000  
[PB-248055/6] 10 p0095 N76-21727

Short-term coal forecast, 1975 - 1980  
[PB-247073/0] 10 p0095 N76-21734

**ENERGY CONVERSION**

Advances in the development of flame-heated thermionic converters 09 p0006 A76-13413

Unconventional energy converters --- German book 10 p0054 A76-23166

Optical methods in energy conversion; Proceedings of the Seminar, Rochester, N.Y., June 23-25, 1975 10 p0059 A76-26067

Optimum design concept for windelectric converters 10 p0064 A76-28230

The U.S.-NSF/NASA 10 p0067 A76-28250

Research applied to solar-thermal power conversion. Volume 1: Executive summary  
[PB-242086/7] 09 p0022 N76-11587

Research applied to solar-thermal power conversion. Volume 2: Final report  
[PB-242087/5] 09 p0022 N76-11588

Suitability of Guam from an environmental aspect as a potential site for ocean thermal energy conversion plants  
[AD-A012500] 09 p0026 N76-12529

Potential of tidal and Gulf Stream power sources  
[PB-243350/6] 09 p0031 N76-13633

A silicon junction solar energy converter 09 p0032 N76-14599

Installation and initial operation of a 4100 watt wind turbine  
[NASA-TM-X-71831] 09 p0032 N76-14605

Solar thermal conversion central receiver pilot plant siting  
[PB-243752/3] 09 p0033 N76-14618

Potential of solar energy for Texas  
[PR-243344/9] 09 p0034 N76-14621

Experimental work on the use of memory alloy NiTi as drive for deployment of antennas and solar cell arrays --- energy conversion by phase transformations  
[BMFT-PB-W-75-09] 09 p0036 N76-15257

Development of an electrical generator and electrolysis cell for a wind energy conversion system  
[PB-243909/9] 09 p0040 N76-15626

Potential for conversion to coal as a fuel by major fuel users in the Pennsylvania counties of Bucks, Chester, Delaware, Montgomery and Philadelphia  
[PB-244946/0] 10 p0072 N76-16642

Soviet papers presented at the 1975 Eindhoven Meeting of Thermionic Conversion Specialists  
[JPRS-66621] 10 p0075 N76-18646

Thermoemission energy converter with impulse ionization 10 p0075 N76-18650

Preliminary assessment of systems for deriving liquid and gaseous fuels from waste or grown organics  
[NASA-TN-D-8165] 10 p0076 N76-18677

Ocean thermal energy conversion: A model approach  
[AD-A015954] 10 p0078 N76-18691

Laser systems for high peak-power applications  
[LA-UR-75-1757] 10 p0082 N76-20470

Comparative evaluation of phase 1 results from the Energy Conversion Alternatives Study (ECAS) --- coal utilization for electric power plants feasibility analysis  
[NASA-TM-X-71855] 10 p0083 N76-20631

Ocean thermal energy conversion research on an engineering evaluation and test program. Volume 1: Executive summary  
[PB-246178/8] 10 p0085 N76-20653

Ocean thermal energy conversion research on an engineering evaluation and test program. Volume 2: Evaluation of prior work, subsystems and components  
[PB-246179/6] 10 p0085 N76-20654

Ocean thermal energy conversion research on an engineering evaluation and test program. Volume 5: Appendices  
[PB-246182/0] 10 p0085 N76-20655

Second NASA Conference on Laser Energy Conversion  
[NASA-SP-395] 10 p0090 N76-21505

Thermo electronic laser energy conversion 10 p0090 N76-21519

Biological conversion of organic refuse to methane  
[PB-247751/1] 10 p0095 N76-21733

**ENERGY CONVERSION EFFICIENCY**

Effect of cover plate treatment on efficiency of solar collectors 09 p0002 A76-11185

The physical principles of the solar cell - An introduction 09 p0003 A76-11695

The solar cell today - A report on recent improvements 09 p0004 A76-11700

The potential of driven Tokamaks as thermonuclear reactors 09 p0005 A76-12382

Photovoltaic energy conversion under high radiation intensities 09 p0007 A76-13905

The implications of high efficiency power cycles for electric power generation 09 p0007 A76-13907

High efficiency graded band-gap Al<sub>x</sub>Ga<sub>1-x</sub>As-GaAs p-on-n solar cell 09 p0013 A76-14780

Performance of Cu<sub>x</sub>S-CdS solar cells after additional Cu-treatment 09 p0013 A76-14790

A new look at CdTe solar cells --- energy conversion efficiency computation 09 p0013 A76-14795

Practical aspects of solar heating - A review of materials use in solar heating applications 09 p0014 A76-15365

Theoretical and experimental photovoltaic energy conversion in an organic film system 09 p0016 A76-16705

Economic optimization models of windpower systems 09 p0016 A76-16843

[PB-246354/5] 10 p0082 N76-20617
- Hydrogen energy: A bibliography with abstracts. Annual supplement, 1974  
[NASA-CR-146791] 10 p0082 N76-20625
- Quarterly literature review of hydrogen energy: A bibliography with abstracts. First quarter, 1975  
[NASA-CR-146789] 10 p0082 N76-20626
- Quarterly literature review of hydrogen energy: A bibliography with abstracts. Second quarter, 1975  
[NASA-CR-146790] 10 p0082 N76-20627
- Quarterly literature review of hydrogen energy: A bibliography with abstracts. Third quarter, 1975  
[NASA-CR-146779] 10 p0083 N76-20628
- Energy-related research and development  
[GPO-51-189] 10 p0083 N76-20630
- Comparative evaluation of phase 1 results from the Energy Conversion Alternatives Study (ECAS) --- coal utilization for electric power plants feasibility analysis  
[NASA-TN-X-71855] 10 p0083 N76-20631
- United States energy through the year 2000, revised  
[GPO-28-243] 10 p0083 N76-20635
- Fiscal policy and the energy crisis, part 4  
[GPO-28-243] 10 p0083 N76-20637
- Energy alternatives for California: Paths to the future  
[R-1793-CSA/RP] 10 p0083 N76-20638
- Energy alternatives for California: Paths to the future, executive summary  
[R-1793/1-CSA/RP] 10 p0084 N76-20639
- An analysis of the impact on the electric utility industry of alternative approaches to significant deterioration. Volume 1: Executive summary --- coal utilization by electric power plants affecting air quality  
[PB-246205/9] 10 p0084 N76-20640
- Development of a high efficiency thin silicon solar cell --- fabrication and stability tests  
[NASA-CR-146770] 10 p0084 N76-20641
- Energy balance for the Washington metropolitan area for 1973  
[PB-245391/8] 10 p0084 N76-20644
- Energy: The states' response: Energy legislation January - July 1975, volume 1  
[PB-246024/4] 10 p0084 N76-20649
- Energy: The states' response: Energy legislation January - July, volume 2  
[PB-246025/1] 10 p0085 N76-20650
- Ocean thermal energy conversion research on an engineering evaluation and test program. Volume 1: Executive summary  
[PB-246178/8] 10 p0085 N76-20653
- Ocean thermal energy conversion research on an engineering evaluation and test program. Volume 2: Evaluation of prior work, subsystems and components  
[PB-246179/6] 10 p0085 N76-20654
- Ocean thermal energy conversion research on an engineering evaluation and test program. Volume 5: Appendices  
[PB-246182/0] 10 p0085 N76-20655
- Assured energy receptivity program, phase 1 --- use of resistors to conserve energy in electric power supplies of rapid transit systems  
[PB-246245/5] 10 p0086 N76-20661
- Assured energy receptivity, a project overview --- use of resistors to conserve energy in electric power supplies of rapid transit systems  
[PB-246247/1] 10 p0086 N76-20662
- Photochemical conversion of solar energy --- by photovoltaic cells (using iron compounds)  
[PB-246156/4] 10 p0086 N76-20667
- Comparison of FEA figures with Interior Committee staff analysis of the President's energy program  
[PB-246209/1] 10 p0087 N76-20674

# ENERGY REQUIREMENTS

# SUBJECT INDEX

- A brief analysis of the impact of environmental laws of energy demand and supply  
[PB-245656/4] 10 p0087 N76-20678
- Energy versus the environment: The issues  
[PB-246382/6] 10 p0087 N76-20681
- Conference on Interdependence Between Energy and Economic Growth  
[PB-246757/9] 10 p0088 N76-20683
- Staff report to the Federal Trade Commission on Federal Energy Land Policy: Efficiency, revenue, and competition  
[PB-246663/9] 10 p0088 N76-20685
- National petroleum product supply and demand. Revised base case forecast and the President's program forecast  
[PB-246218/2] 10 p0088 N76-20690
- Impact of the proposed energy deregulation/tax program on selected industries  
[PB-246207/5] 10 p0089 N76-20693
- Special energy research and development appropriations for fiscal year 1975

## SUBJECT INDEX

## ENERGY TECHNOLOGY

- National priorities and Federal research and development programs --- solid waste utilization [GPO-40-686] 09 p0035 N76-14972
- Energy supply demand/need and the gaps between. Volume 1: An overview [PB-243976/8] 09 p0040 N76-15620
- Energy supply, demand/need and the gaps between. Volume 2: Monograph, working papers and appendix papers [PB-243977/6] 09 p0040 N76-15621
- Research and development project for new energy technology (Sunshine Plan) [AD-A014534] 09 p0042 N76-15650
- Project plan hydrogen energy systems technology. Phase 1: Hydrogen energy systems technology study [NASA-CR-146424] 10 p0077 N76-18678
- Alternate energy sources for marine power plants [COM-75-11474/4] 10 p0078 N76-18688
- The future environment: US and world trends [NASA-CR-144728] 10 p0078 N76-18969
- Energy and other non-renewable resources 10 p0078 N76-18971
- Future US energy demands based upon traditional consumption patterns lead to requirements which significantly exceed domestic supply 10 p0078 N76-18972
- Fiscal policy and the energy crisis, part 4 [GPO-28-243] 10 p0083 N76-20637
- Energy alternatives for California: Paths to the future [R-1793-CSA/RP] 10 p0083 N76-20638
- Energy alternatives for California: Paths to the future, executive summary [R-1793/1-CSA/RP] 10 p0084 N76-20639
- Diversification of energy sources 10 p0093 N76-21697
- Energy alternatives: A comparative analysis [PB-246365/1] 10 p0094 N76-21715
- ENERGY STORAGE**
- A new concept in electric generation and energy storage 09 p0007 A76-13908
- Mitre terrestrial photovoltaic energy system 09 p0011 A76-14759
- High-temperature solar heat sources for spacecraft --- Russian book 10 p0046 A76-19446
- Computer modeling of heat pumps and the simulation of solar-heat pump systems [ASME PAPER 75-WA/SOL-3] 10 p0052 A76-21971
- Solar energy storage systems 10 p0054 A76-22699
- Magnetic enhancement of laser amplifier energy storage capability 10 p0059 A76-26076
- Wind power --- Book 10 p0063 A76-27784
- R-32 energy storage propulsion system --- for rapid transit energy consumption reduction 10 p0063 A76-27800
- Survey of Oklahoma State University work in energy storage, variable speed constant frequency generators and wind generating systems 10 p0066 A76-28241
- Some wind-energy storage options 10 p0066 A76-28242
- Air storage power --- nuclear powered compressed air system for peak power production 10 p0066 A76-28244
- Hydrogen sorption in LaNi5 10 p0067 A76-28397
- Studies pertaining to hydrogen car development. Part B: A comparative study of engine performance with gasoline and hydrogen. Part C: Hydrogen storage and flow system [PB-242131/1] 09 p0019 N76-10487
- Laser fusion: Capital cost of inertial confinement [UCRL-76546] 09 p0020 N76-11427
- Theoretical and practical aspects of energy storage and compression [UCRL-76091] 09 p0022 N76-11830
- An improved rotatable mass for a flywheel [NASA-CASE-MFS-23051-1] 09 p0027 N76-13500
- Potential pumped storage projects in the Pacific Southwest [PB-242798/7] 09 p0030 N76-13625
- Can flywheels replace pumped storage? [BLL-CE-TRANS-6761-(9022.09)] 09 p0032 N76-14596
- Metal hydrides for energy storage applications [AD-A014174] 09 p0036 N76-15309
- Development of lithium-metal sulfide batteries for load leveling [PB-244390/1] 09 p0042 N76-15645
- Research on solar energy storage subsystems utilizing the latent heat of phase change of paraffin hydrocarbons for the heating and cooling of buildings [PB-244872/8] 10 p0072 N76-16635
- Cryogenic storage 10 p0076 N76-18666
- Design of a force-free inductive storage coil [LA-5953-MS] 10 p0079 N76-19347
- Cost benefit of utilizing thermal storage for peak cooling power leveling [AD-A017297] 10 p0081 N76-19589
- Mechanical capacitor [NASA-TN-D-8185] 10 p0083 N76-20634
- Development of high-density inertial-energy storage [PB-245998/0] 10 p0088 N76-20692
- ENERGY TECHNOLOGY**
- Concept selection, optimization, and preliminary design of large wind generators 09 p0001 A76-10147
- A methodology for selecting optimal components for solar thermal energy systems - Application to power generation 09 p0002 A76-11189

## GAS TURBINES

## SUBJECT INDEX

- Air storage power --- nuclear powered compressed air system for peak power production  
10 p0066 A76-28244
- GAS TURBINES**  
A general review of closed-cycle gas turbines using fossil, nuclear and solar energy --- Book  
10 p0047 A76-20098  
Energy recovery turbines --- waste energy utilization in industrial processes  
10 p0055 A76-24269  
Cycle analysis of air-storage power plants --- underground storage for peak power generation [ASME PAPER 76-GT-41]  
10 p0058 A76-25790
- GASEOUS FUELS**  
Gasification gases of coke, coal, benzol, and petroleum and cracking products of natural gas with air-water vapor mixtures  
10 p0057 A76-25224  
Modern gas turbines for low Btu gas fuel operation [ASME PAPER 76-GT-117]  
10 p0058 A76-25850  
Reliability and redundancy problem for an integrated gas supply system  
10 p0061 A76-26322
- GASES**  
Fuel gas production from solid waste [PB-245083/1]  
10 p0069 N76-16243
- GEOLOGICAL FAULTS**  
Faulting in geothermal areas [PB-247071/4]  
10 p0097 N76-21837
- GEOLOGICAL SURVEYS**  
Space acquired imagery, a versatile tool in the development of energy sources  
09 p0015 A76-15458  
Geothermal investigations of the U.S. Geological Survey in Long Valley, California, 1972-1973  
10 p0053 A76-22111  
Some elements of the theory of the search for useful minerals  
10 p0068 A76-28691
- GEOS-C SATELLITE**  
The GEOS solar generator  
09 p0011 A76-14738
- GEOTHERMAL ENERGY CONVERSION**  
What can we expect from geothermal energy --- overview  
10 p0046 A76-19398  
Power turbines for Ocean Thermal Energy Conversions systems [ASME PAPER 75-WA/OCE-11]  
10 p0051 A76-21960  
Geothermal energy --- Book  
10 p0062 A76-27123  
Some methods for constructing thermal and hydrodynamic fields in systems for heat extraction from the earth  
10 p0068 A76-28509  
An analysis of the potential use of geothermal energy for power generation along the Texas Gulf Coast [PB-243342/3]  
09 p0035 N76-14636  
Experimental geothermal research facilities study (phase o), volume 1  
09 p0039 N76-15616  
Experimental geothermal research facilities study (phase o), volume 2  
09 p0039 N76-15617  
Electric power generation using geothermal brine resources for a proof-of-concept facility [PB-245264/7]  
10 p0072 N76-16645  
Proceedings of the Workshop on Environmental aspects of Geothermal Resources Development [PB-245209/2]  
10 p0084 N76-20645  
Test and evaluation of a geothermal heat exchanger [PB-247318/1]  
10 p0095 N76-21731  
Evaluation of geothermal activity in the Truckee Meadows, Washoe County, Nevada [PB-247297/5]  
10 p0096 N76-21736
- GEOTHERMAL RESOURCES**  
What can we expect from geothermal energy --- overview  
10 p0046 A76-19398  
Evaporator design for sea solar power cycles [ASME PAPER 75-WA/SOL-5]  
10 p0052 A76-21973  
Geothermal investigations of the U.S. Geological Survey in Long Valley, California, 1972-1973  
10 p0053 A76-22111  
The near-surface hydrothermal regime of Long Valley caldera  
10 p0053 A76-22112
- Geothermal setting and simple heat conduction models for the Long Valley caldera  
10 p0053 A76-22113  
Convective heat flow from hot springs in the Long Valley caldera, Mono County, California  
10 p0053 A76-22114  
Audiomagnetotelluric sounding as a reconnaissance exploration technique in Long Valley, California --- for geothermal resources  
10 p0053 A76-22115  
Method for the hydrodynamic and thermal calculation of circulating systems  
10 p0067 A76-28508  
State policy considerations for geothermal development in Hawaii [PB-243467/8]  
09 p0034 N76-14630  
The impact of state and federal law on development of geothermal resources in Texas [PB-243340/7]  
09 p0034 N76-14632  
Experimental geothermal research facilities study (phase o), volume 1  
09 p0039 N76-15616  
Experimental geothermal research facilities study (phase o), volume 2  
09 p0039 N76-15617  
Electric power generation using geothermal brine resources for a proof-of-concept facility [PB-245264/7]  
10 p0072 N76-16645  
A technology assessment of geothermal energy resource development [PB-246241/4]  
10 p0087 N76-20682  
Transport of mass and energy in porous media due to natural convection. The geothermal basin problem [PB-247087/0]  
10 p0096 N76-21739  
Faulting in geothermal areas [PB-247071/4]  
10 p0097 N76-21837
- GERMANIUM**  
Performance of germanium pin-photovoltaic cells at high incident radiation intensity  
09 p0013 A76-14781
- GERMANY**  
Situation and development of district heating in UNICHAL member countries [BLI-CE-TRANS-6668-(9022.09)]  
09 p0032 N76-14594  
Comparison of energy consumption between West Germany and the United States [PB-245652/3]  
10 p0080 N76-19577
- GLASS**  
Industrial energy study of the glass industry [PB-242832/4]  
09 p0026 N76-12531
- GOVERNMENT/INDUSTRY RELATIONS**  
Northeast Utilities' participation in the Kaman/NASA wind power program  
09 p0001 A76-10148  
Get ready for the great debate on transportation --- DOT policy making  
10 p0047 A76-19595  
State/federal regulation of natural gas [PB-243339/9]  
09 p0034 N76-14620  
A brief analysis of the impact of environmental laws of energy demand and supply [PB-245656/4]  
10 p0087 N76-20678  
Staff report to the Federal Trade Commission on Federal Energy Land Policy: Efficiency, revenue, and competition [PB-246663/9]  
10 p0088 N76-20685
- GOVERNMENTS**  
Legal aspects of state-owned oil and gas energy resources [PB-243337/3]  
09 p0031 N76-13979  
Legal and regulatory policy aspects of energy allocation [PB-243336/5]  
09 p0031 N76-13980  
Energy: The states' response: Energy legislation January - July 1975, volume 1 [PB-246024/4]  
10 p0084 N76-20649  
Energy: The states' response: Energy legislation January - July, volume 2 [PB-246025/1]  
10 p0085 N76-20650  
Energy data requirements of the Federal Government: Part 3: Federal offshore oil and gas leasing policies [GPO-35-032]  
10 p0089 N76-21033
- GRANULAR MATERIALS**  
Application of granular semiconductors to photothermal conversion of solar energy  
10 p0057 A76-25120

## SUBJECT INDEX

## HELIUM PLASMA

## GRAVITATIONAL EFFECTS

Confinement of extragalactic radio sources by massive objects 10 p0055 A76-24780

## GROUND WATER

Geothermal investigations of the U.S. Geological Survey in Long Valley, California, 1972-1973 10 p0053 A76-22111

## GULF STREAM

Potential of tidal and Gulf Stream power sources [PB-243350/6] 09 p0031 N76-13633

## H

## HARMONIC GENERATIONS

Mixed metal vapor phase matching for third-harmonic generation 10 p0046 A76-19591

## HAWAII

State policy considerations for geothermal development in Hawaii [PB-243467/8] 09 p0034 N76-14630

## HEAT EXCHANGERS

A methodology for selecting optimal components for solar thermal energy systems - Application to power generation 09 p0002 A76-11189

Comparison of solar heat exchangers 09 p0008 A76-14088

Selection of design parameters for closed-circuit forced-circulation solar heating systems 10 p0049 A76-20839

Heat exchanger penalties in double-loop solar water heating systems 10 p0049 A76-20840

Development of plastic heat exchangers for sea solar power plants [PB-242155/0] 09 p0025 N76-12518

Heat Pipe Technology: A bibliography with abstracts [NASA-CR-146328] 10 p0074 N76-18372

Heat Pipe Technology: A bibliography with abstracts [NASA-CR-146329] 10 p0074 N76-18373

Design and optimization of the power cycle and the heat exchangers for an ocean thermal power system 10 p0079 N76-19550

## HEAT FLUX

Thermic controls to regulate solar heat flux into buildings [PB-246364/4] 10 p0087 N76-20675

## HEAT GENERATION

A new concept in electric generation and energy storage 09 p0007 A76-13908

Thermodynamic analysis of a coal fired MHD power cycle with chemical heat regeneration 09 p0016 A76-17057

Hydrogen manufacture by Lurgi gasification of Oklahoma coal 09 p0037 N76-15578

A technology assessment of geothermal energy resource development [PB-246241/4] 10 p0087 N76-20682

## HEAT PIPES

Preliminary analysis of heat pipe heat exchangers for heat recovery [ASME PAPER 75-WA/HT-36] 10 p0051 A76-21927

Waste heat utilization through the use of heat pipes [ASME PAPER 75-WA/HT-48] 10 p0051 A76-21931

The heat pipe - Hot new way to save energy 10 p0056 A76-24834

Heat Pipe Technology: A bibliography with abstracts [NASA-CR-146328] 10 p0074 N76-18372

Heat Pipe Technology: A bibliography with abstracts [NASA-CR-146329] 10 p0074 N76-18373

Heat Pipe Technology: A bibliography with abstracts [NASA-CR-146780] 10 p0082 N76-20406

Heat Pipe Technology: A bibliography with abstracts [NASA-CR-145826] 10 p0082 N76-20407

Heat pipe technology: A bibliography with abstracts [NASA-CR-146640] 10 p0089 N76-21423

## HEAT PUMPS

A solar heat pump 09 p0009 A76-14093

Computer modeling of heat pumps and the simulation of solar-heat pump systems [ASME PAPER 75-WA/SOL-3] 10 p0052 A76-21971

Solar assisted heat pump system - A parametric study for space heating of a characteristic house in Madison, Wisconsin [ASME PAPER 75-WA/SOL-8] 10 p0052 A76-21976

Solar energy storage systems 10 p0054 A76-22699

Commercial building unitary heat pump system with solar heating [PB-244488/3] 09 p0040 N76-15629

## HEAT SINKS

Some energy sources and sinks in the upper atmosphere 09 p0017 A76-18421

## HEAT SOURCES

High-temperature solar heat sources for spacecraft --- Russian book 10 p0046 A76-19446

Reliability problem of heat-supply systems with hot redundancy 10 p0061 A76-26324

Evaluation of new energy sources for process heat [PB-245604/4] 10 p0084 N76-20646

## HEAT STORAGE

Thermal energy storage for solar heating and off-peak air conditioning 09 p0016 A76-17053

Selection of design parameters for closed-circuit forced-circulation solar heating systems 10 p0049 A76-20839

Heat exchanger penalties in double-loop solar water heating systems 10 p0049 A76-20840

Low cost solar augmented heat pump system for residential heating and cooling [ASME PAPER 75-WA/SOL-7] 10 p0052 A76-21975

Simulation of solar heated buildings [ASME PAPER 75-WA/SOL-10] 10 p0052 A76-21978

The shallow solar pond energy conversion system 10 p0060 A76-26143

The effect of heat loss on solar heating systems 10 p0060 A76-26144

## HEAT TRANSFER

Experimental study of heat transfer in the channel of an open-cycle magnetohydrodynamic generator 10 p0050 A76-21041

Heat transfer models and energy needs for residential homes [PB-244992/4] 10 p0071 N76-16634

## HEAT TRANSFER COEFFICIENTS

Comparison of solar heat exchangers 09 p0008 A76-14088

## HEAT TRANSMISSION

A new concept in electric generation and energy storage 09 p0007 A76-13908

## HEATING EQUIPMENT

Solar-assisted gas-energy water-heating feasibility for apartments 09 p0002 A76-11188

Application of optimization techniques to solar heating and cooling [AAS PAPER 75-108] 09 p0003 A76-11338

Advances in the development of flame-heated thermionic converters 09 p0006 A76-13413

A solar heating system for a northern New Mexico adobe house [ASME PAPER 75-WA/SOL-11] 10 p0053 A76-21979

## HELICOPTER PROPELLER DRIVE

How big is a windmill - Glauert revisited --- windpowered generator size-power relationship 09 p0010 A76-14619

## HELIOMETERS

Graph-analytical method for the determination of the shape and dimensions of the reflecting surface of a heliostat 10 p0056 A76-24948

## HELIUM

Brookhaven program to develop a helium-cooled power transmission system --- superconducting power transmission for electric power lines [BNL-20444] 10 p0093 N76-21705

## HELIUM PLASMA

Closed cycle MHD power generation experiments using a helium-cesium working fluid in the NASA Lewis Facility [NASA-TM-X-71885] 10 p0091 N76-21679

## HIERARCHIES

## SUBJECT INDEX

### HIERARCHIES

Hierarchical systematics of fusion-fission energy systems  
09 p0005 A76-12391

**HIGH ALTITUDE ENVIRONMENTS**  
Solar space heating at high altitude conditions  
10 p0060 A76-26147

**HIGH PRESSURE OXYGEN**  
High pressure hydrogen by electrolysis - The provision of a viable energy economy for isolated communities and its potential application on a larger scale  
10 p0066 A76-28243

**HIGH TEMPERATURE FLUIDS**  
Introduction of an ionizable additive in the form of an aqueous solution of K<sub>2</sub>CO<sub>3</sub> of high temperature and concentration --- for MHD generators  
10 p0057 A76-25536

**HIGH TEMPERATURE GAS COOLED REACTORS**  
Nuclear power in the Shuttle era --- electric power reactor systems assessment  
[AAS PAPER 75-283] 09 p0006 A76-12842

**HIGH TEMPERATURE NUCLEAR REACTORS**  
Studies of the use of high-temperature nuclear heat from an HTGR for hydrogen production  
[NASA-CR-134919] 09 p0037 N76-15574

**HIGH VOLTAGES**  
High-voltage vertical multijunction solar cell  
10 p0051 A76-21471

**HINGES**  
100-kw hingeless metal wind turbine blade design, analysis and fabrication  
09 p0010 A76-14623

**HONEYCOMB STRUCTURES**  
Design of the IUE solar array  
09 p0011 A76-14737  
Radiation characteristics of honeycomb solar collectors  
09 p0015 A76-15506

**HUMAN PERFORMANCE**  
Energy costs of specific custodial work tasks  
09 p0035 N76-14753

**HUMAN WASTES**  
Biological conversion of organic refuse to methane  
[PB-247751/1] 10 p0095 N76-21733

**HYDROCARBON FUEL PRODUCTION**  
Coal conversion technology --- Book  
10 p0062 A76-27125

**HYDROCARBONS**  
Pyrolysis system and process --- recovering energy from solid wastes containing hydrocarbons  
[NASA-CASE-MSC-12669-1] 10 p0071 N76-16621

**HYDRODYNAMICS**  
Some energy sources and sinks in the upper atmosphere  
09 p0017 A76-18421

**HYDROELECTRIC POWER STATIONS**  
Update on the solar power system and component research program --- coupled with hydroelectric system  
09 p0002 A76-11186  
Cost and size estimates for an electrochemical bulk energy storage concept  
09 p0017 A76-18505  
Potential pumped storage projects in the Pacific Southwest  
[PB-242798/7] 09 p0030 N76-13625

**HYDROGEN**  
Mitre terrestrial photovoltaic energy system  
09 p0011 A76-14759  
Studies pertaining to hydrogen car development. Part B: A comparative study of engine performance with gasoline and hydrogen. Part C: Hydrogen storage and flow system  
[PB-242131/1] 09 p0019 N76-10487  
Studies of the use of high-temperature nuclear heat from an HTGR for hydrogen production  
[NASA-CR-134919] 09 p0037 N76-15574  
Hydrogen from coal  
09 p0037 N76-15576  
Production of hydrogen by direct gasification of coal with steam using nuclear heat  
09 p0037 N76-15577  
Hydrogen manufacture by Lurgi gasification of Oklahoma coal  
09 p0037 N76-15578  
Ispra Mark-10 water splitting process  
09 p0037 N76-15580

### Process description

09 p0037 N76-15582  
Studies of the use of heat from high temperature nuclear sources for hydrogen production processes  
[NASA-CR-134918] 09 p0038 N76-15599

**Hydrogen**  
[GPO-62-332] 10 p0073 N76-17644  
Supply options --- hydrogen market  
10 p0075 N76-18656  
Project plan hydrogen energy systems technology. Phase 1: Hydrogen energy systems technology study  
[NASA-CR-146424] 10 p0077 N76-18678

**HYDROGEN ATOMS**  
Electrolytic hydrogen production: An analysis and review  
[NASA-TM-X-71856] 10 p0073 N76-17641

**HYDROGEN EMBRITTLEMENT**  
Hydrogen problems in energy related technology --- metal degradation and embrittlement  
10 p0047 A76-20072

**HYDROGEN FUELS**  
The manufacture of hydrogen from coal  
[SAE PAPER 751095] 10 p0053 A76-22313  
The implementation of a hydrogen energy system in Texas  
[PB-243346/4] 09 p0034 N76-14634  
Metal hydrides for energy storage applications  
[AD-A014174] 09 p0036 N76-15309  
Survey of hydrogen production and utilization methods. Volume 1: Executive summary  
[NASA-CR-144127] 09 p0038 N76-15590  
Survey of hydrogen production and utilization methods. Volume 2: Discussion  
[NASA-CR-144128] 09 p0038 N76-15591  
Survey of hydrogen production and utilization methods. Volume 3: Appendixes  
[NASA-CR-144129] 09 p0038 N76-15592  
Hydrogen-rich gas generator  
[NASA-CASE-NPO-13560] 10 p0074 N76-18460  
Hydrogen energy: A bibliography with abstracts. Annual supplement, 1974  
[NASA-CR-146791] 10 p0082 N76-20625  
Quarterly literature review of hydrogen energy: A bibliography with abstracts. First quarter, 1975  
[NASA-CR-146789] 10 p0082 N76-20626  
Quarterly literature review of hydrogen energy: A bibliography with abstracts. Second quarter, 1975  
[NASA-CR-146790] 10 p0082 N76-20627  
Quarterly literature review of hydrogen energy: A bibliography with abstracts. Third quarter, 1975  
[NASA-CR-146779] 10 p0083 N76-20628

**HYDROGEN OXYGEN FUEL CELLS**  
Lightweight fuel cell powerplant for Tug --- Space Tug  
[AAS PAPER 75-143] 09 p0005 A76-12789  
Fuel cells /revised and enlarged edition/ --- Book  
09 p0016 A76-17525

**HYDROGEN-BASED ENERGY**  
The manufacture of hydrogen from coal  
[SAE PAPER 751095] 10 p0053 A76-22313  
Some considerations involving hydrogen-rich automotive fuels  
10 p0054 A76-22700  
Energy: The solar-hydrogen alternative  
10 p0061 A76-26449  
High pressure hydrogen by electrolysis - The provision of a viable energy economy for isolated communities and its potential application on a larger scale  
10 p0066 A76-28243  
Hydrogen sorption in LaNi<sub>5</sub>  
10 p0067 A76-28397  
Hydrogen production from water by thermochemical cycles  
10 p0067 A76-28398  
Survey of hydrogen production and utilization methods. Volume 1: Executive summary  
[NASA-CR-144127] 09 p0038 N76-15590  
Survey of hydrogen production and utilization methods. Volume 2: Discussion  
[NASA-CR-144128] 09 p0038 N76-15591  
Survey of hydrogen production and utilization methods. Volume 3: Appendixes  
[NASA-CR-144129] 09 p0038 N76-15592  
Hydrogen tomorrow: Demands and technology requirements  
[NASA-CR-146416] 10 p0075 N76-18654  
Future hydrogen use  
10 p0075 N76-18655

# SUBJECT INDEX

# INFORMATION SYSTEMS

Technology issues 10 p0075 N76-18657

Conclusions --- hydrogen-based energy 10 p0075 N76-18658

Hydrogen utilization and alternatives 10 p0076 N76-18659

Hydrogen production 10 p0076 N76-18660

Factors affecting the broadened use of hydrogen 10 p0076 N76-18661

European activities in the hydrogen energy field 10 p0076 N76-18662

Hydrogen uses 10 p0076 N76-18663

Thermochemical cycles 10 p0076 N76-18664

Production cost methods and data 10 p0076 N76-18665

Materials considerations 10 p0076 N76-18667

Hydrogen, socio-environmental impact 10 p0076 N76-18668

Hydrogen energy: A bibliography with abstracts. Annual Supplement, 1974 10 p0082 N76-20625

Quarterly literature review of hydrogen energy: A bibliography with abstracts. First quarter, 1975 10 p0082 N76-20626

Quarterly literature review of hydrogen energy: A bibliography with abstracts. Second quarter, 1975 10 p0082 N76-20627

Quarterly literature review of hydrogen energy: A bibliography with abstracts. Third quarter, 1975 10 p0083 N76-20628

Photocatalytic generation of hydrogen from water 10 p0090 N76-21508

**ICE FORMATION**

Passive freeze protection for solar collectors 10 p0049 A76-20846

**ILLUMINATING**

Lighting and thermal operations. Energy management action program for commercial-public-industrial buildings 10 p0072 N76-16650

**IMPULSE GENERATORS**

Thermoemission energy converter with impulse ionization 10 p0075 N76-18650

**INDEXES (DOCUMENTATION)**

Wind energy utilization: A bibliography with abstracts - Cumulative volume 1944/1974 --- Book 10 p0053 A76-22496

**INDIUM COMPOUNDS**

In2O3/Si heterojunction solar cells 09 p0012 A76-14777

**INDIUM PHOSPHIDES**

Preparation and properties of InP/CdS solar cells 10 p0051 A76-21472

**INDUSTRIAL ENERGY**

Thermal nuclear powerstations --- uranium fueled-graphite moderated reactor parameters 09 p0006 A76-13139

An impact analysis of a micro wind system --- windpower for recovering magnesium from stack dust 10 p0054 A76-23113

Methodological aspects of reliability analysis of large-scale power systems 10 p0060 A76-26320

Reliability and redundancy problem for an integrated gas supply system 10 p0061 A76-26322

Reliability aspects of a crude oil supply system 10 p0061 A76-26323

Potential for energy conservation in industrial operations in Texas 09 p0030 N76-13622

Factors affecting coal substitution for other fossil fuels in electric power production and industrial uses 09 p0038 N76-15600

Industrial energy conservation. The CCMS pilot study. Project area 1: An international data base 09 p0041 N76-15635

Assessment of industrial energy options based on coal and nuclear systems 10 p0079 N76-19565

Industry efforts in energy conservation [ORNL-4995] 10 p0083 N76-20636

Evaluation of new energy sources for process heat [PB-245604/4] 10 p0084 N76-20646

Energy consumption: Fuel utilization and conservation in industry 10 p0088 N76-20688

**INDUSTRIAL MANAGEMENT**

Impact of energy developments on the sheet metal industry 09 p0041 N76-15630

Evaluation of the theoretical potential for energy conservation in seven basic industries 09 p0041 N76-15644

Small business and the energy shortage, volume 1 [GPO-99-720] 10 p0075 N76-18644

Small business and the energy shortage, volume 2 [GPO-40-890] 10 p0075 N76-18645

Energy management case histories [PB-246763/7] 10 p0088 N76-20689

**INDUSTRIAL PLANTS**

Hydrogen from coal 09 p0037 N76-15576

Energy industrial center study [PB-243823/2] 09 p0039 N76-15618

Study of the energy and fuel-use patterns in the nonferrous metals industries [PB-245194/6] 10 p0069 N76-16227

Energy consumption: Fuel utilization and conservation in industry [PB-246888/2] 10 p0088 N76-20688

**INDUSTRIAL WASTES**

The development and testing of a novel high temperature ceramic recuperator --- regenerators for waste energy utilization of industrial wastes [PB-245059/1] 10 p0069 N76-16240

**INDUSTRIES**

Industrial energy study of the glass industry [PB-242832/4] 09 p0026 N76-12531

Impact on Texas water quality and resources of alternate strategies for production distribution, and utilization of energy in Texas in the period 1974-2000 09 p0031 N76-13656

The energy crisis and proposed solutions. Part 4: Industrial, agricultural, and home energy problems, transportation, additional testimony from government officials 09 p0033 N76-14609

Energy conservation potential in the cement industry [PB-245159/9] 10 p0071 N76-16630

Allocation models for energy planning 10 p0074 N76-18638

The future environment: US and world trends [NASA-CR-144728] 10 p0078 N76-18969

Staff report to the Federal Trade Commission on the structure, conduct and performance of the Western States Petroleum Industry [PB-245855/2] 10 p0080 N76-19571

Energy use patterns in metallurgical and nonmetallic mineral processing. Phase 4: Energy data and flowsheets, high-priority commodities 10 p0080 N76-19576

Energy use patterns in metallurgical and nonmetallic mineral processing. Phase 5: energy data end flowsheets, intermediate-priority commodities [PB-246357/8] 10 p0081 N76-20371

A comparison of two natural gas forecasting models: TERA and MacAvoy-Pindyck [PB-246219/0] 10 p0087 N76-20673

Conservation in the energy industry 10 p0092 N76-21690

Report on a workshop for energy conservation in southeast industrial plants [PB-246651/4] 10 p0096 N76-21738

**INFORMATION SYSTEMS**

Energy information resources maintained by the Metropolitan Washington Council of Governments [PB-245248/0] 10 p0071 N76-16633

REIS: Phase 2. Report 1: An overview of the REIS system 10 p0094 N76-21724

## INFRARED RADIATION

- Radiation characteristics of honeycomb solar collectors  
09 p0015 A76-15506
- INFRARED REFLECTION**  
Thin-film conducting microgrids as transparent heat mirrors --- for solar energy application  
10 p0062 A76-27136
- INPUT**  
Example of input-output analysis  
09 p0023 N76-12467
- INSOLATION**  
Solar thermal conversion mission analysis. Volume 3: Southwestern United States insolation climatology  
[PB-242900/9]  
09 p0028 N76-13603
- INTERNATIONAL COOPERATION**  
Problems of the environment, energy, and natural resources: The international aspect --- Russian book  
10 p0059 A76-26047
- New potentialities for international co-operation in the field of solar energy and its applications  
10 p0060 A76-26150
- US international energy policy  
[GPO-53-813]  
10 p0071 N76-16625
- Exploratory discussions concerning a possible EPRI/Kurchatov Institute joint program on fusion power  
[PB-247269/4]  
10 p0094 N76-21725
- INTERNATIONAL TRADE**  
Energy information reported to congress as required by Public Law 93-319  
[PB-244606/0]  
09 p0039 N76-15615
- ION IMPLANTATION**  
Solar cells from gallium arsenide obtained by ion bombardment  
10 p0056 A76-24945
- IONIZATION**  
Thermoemission energy converter with impulse ionization  
10 p0075 N76-18650
- IOWA**  
US electrical energy dilemma and an energy model for the electrical utilities of Iowa  
10 p0070 N76-16615
- IRON COMPOUNDS**  
Photochemical conversion of solar energy --- by photovoltaic cells (using iron compounds)  
[PB-246156/4]  
10 p0086 N76-20667
- IRON ORES**  
Energy requirements in Minnesota iron ore and taconite mining 1953 - 2000  
[PB-248055/6]  
10 p0095 N76-21727
- IUE**  
Design of the IUE solar array  
09 p0011 A76-14737
- JET ENGINE FUELS**  
Effect of fuel properties on performance of a single aircraft turbojet combustor --- from coal and oil-shale derived syncrudes  
10 p0047 A76-20150
- Future synthetic fuels: A scientific and technical applications forecast  
[AD-A014947]  
10 p0069 N76-16244
- END-uses of petroleum products in the U.S., 1965-1975. Volume 1: Sources, methods and results  
[PB-246393/3]  
10 p0085 N76-20651
- END-uses of petroleum products in the U.S., 1965-1975. Volume 2: Tabulations of results  
[PB-246394/1]  
10 p0085 N76-20652
- Synthesis and analysis of jet fuels from shale oil and coal syncrudes  
[NASA-TN-X-73399]  
10 p0089 N76-21341
- JOSEPHSON JUNCTIONS**  
Future prospects --- superconducting magnet and Josephson device development and applications  
10 p0055 A76-23598
- JUNCTION DIODES**  
Some comments on the evaluation of electrical parameters of a solar cell  
09 p0005 A76-12293

## L

## LAND MANAGEMENT

- Multiscale aerial and orbital techniques for management of coal-mined lands  
10 p0046 A76-19583
- Outer Continental Shelf Lands Act amendments and Coastal Zone Management Act amendments, part 2  
[GPO-51-748]  
09 p0043 N76-15928
- Project proposal for surface-mined land enhancement (SMILE)  
[PB-245567/3]  
10 p0070 N76-16609
- LAND USE**  
Energy development and land use in Texas --- environmental impacts  
[PB-243328/2]  
09 p0027 N76-13583
- Project proposal for surface-mined land enhancement (SMILE)  
[PB-245567/3]  
10 p0070 N76-16609
- LANTHANUM ALLOYS**  
Hydrogen sorption in LaNi5  
10 p0067 A76-28397

## LASER APPLICATIONS

- Laser thermonuclear fusion in the energetics of the future  
10 p0047 A76-19917
- Optical methods in energy conversion; Proceedings of the Seminar, Rochester, N.Y., June 23-25, 1975  
10 p0059 A76-26067
- Laser fusion: Capital cost of inertial confinement  
[UCRL-76546]  
09 p0020 N76-11427
- Second NASA Conference on Laser Energy Conversion  
[NASA-SP-395]  
10 p0090 N76-21505
- Conversion of laser energy to chemical energy by the photoassisted electrolysis of water  
10 p0090 N76-21507
- Application of high power lasers to space power and propulsion  
10 p0090 N76-21515
- Thermo electronic laser energy conversion  
10 p0090 N76-21519
- Initial experiments with a laser driven Stirling engine  
10 p0090 N76-21524
- Laser fusion, an overview  
[LA-UR-75-660]  
10 p0097 N76-22059
- LASER DOPPLER VELOCIMETERS**  
Optical diagnostics of combustion processes  
10 p0059 A76-26071
- LASER FUSION**  
Some basic energy and economic considerations for a laser ignited fusion reactor  
10 p0059 A76-26069
- LASER OUTPUTS**  
Neodymium glass lasers - A status report --- fusion research applications  
10 p0059 A76-26074
- Magnetic enhancement of laser amplifier energy storage capability  
10 p0059 A76-26076
- Second NASA Conference on Laser Energy Conversion  
[NASA-SP-395]  
10 p0090 N76-21505
- Photovoltaic conversion of laser energy  
10 p0090 N76-21509

## LASER PLASMAS

- Laser plasmas and nuclear energy --- Book  
09 p0006 A76-13084
- Progress in laser-solenoid fusion  
09 p0009 A76-14163
- The energy crisis and a potential laser-fusion solution  
10 p0046 A76-19400
- A possible application of electric discharge CO2 lasers for laser thermonuclear fusion  
10 p0048 A76-20559

## LASERS

- Laser systems for high peak-power applications  
[LA-UR-75-1757]  
10 p0082 N76-20470
- LAW (JURISPRUDENCE)**  
The role of North Carolina in regulating offshore petroleum development  
[CON-75-10854/8]  
09 p0022 N76-12458
- Existing energy law and regulatory practice in Texas  
[PB-243334/0]  
09 p0033 N76-14615
- The impact of state and federal law on development of geothermal resources in Texas  
[PB-243340/7]  
09 p0034 N76-14632

# SUBJECT INDEX

# MARKET RESEARCH

The economic impact of environmental regulations  
[GPO-51-795] 10 p0074 N76-18000

Atomic energy legislation through 93rd Congress,  
2nd Session  
[GPO-49-939] 10 p0081 N76-20029

Energy Independence Act of 1975 and related tax  
proposals  
[PB-247305/6] 10 p0095 N76-21728

**LEGAL LIABILITY**  
Legal aspects of state-owned oil and gas energy  
resources  
[PB-243337/3] 09 p0031 N76-13979

**LENS DESIGN**  
Linear Fresnel lens concentrators --- for solar  
power generation  
09 p0008 A76-14090

**LIGHT AMPLIFIERS**  
Magnetic enhancement of laser amplifier energy  
storage capability  
10 p0059 A76-26076

**LINEAR PROGRAMMING**  
Allocation models for energy planning  
10 p0074 N76-18638

Formulating a pilot model for energy in relation  
to the national economy  
[AD-A016184] 10 p0078 N76-18693

**LINEAR SYSTEMS**  
Construction and evaluation of linear segmented  
solar concentrators  
[ASME PAPER 75-WA/SOL-6] 10 p0052 A76-21974

**LIQUEFIED NATURAL GAS**  
Liquified natural gas, in France and throughout  
the world  
10 p0062 A76-26846

**LIQUID COOLING**  
Experiments on solar photovoltaic power generation  
using concentrator and liquid cooling  
09 p0012 A76-14768

**LIQUID HYDROGEN**  
Minimum energy, liquid hydrogen supersonic cruise  
vehicle study  
[NASA-CR-137776] 10 p0072 N76-17101

Cryogenic storage  
10 p0076 N76-18666

**LIQUIDS**  
Petroleum refinery liquid wastes: Environmental,  
energy and economic impacts  
09 p0019 N76-10565

**LITHIUM ALLOYS**  
Development of lithium-metal sulfide batteries for  
load leveling  
[PB-244390/1] 09 p0042 N76-15645

**LOADS (FORCES)**  
Design considerations for large wind mills  
09 p0009 A76-14617

**LOGISTICS MANAGEMENT**  
Benefits of VTOL aircraft in offshore petroleum  
logistics support  
[NASA-TM-X-73098] 10 p0074 N76-18087

**LOW COST**  
Progress in new low cost processing methods ---  
solar array fabrication  
09 p0011 A76-14764

**LUMINOUS INTENSITY**  
Photovoltaic energy conversion under high  
radiation intensities  
09 p0007 A76-13905

Performance of germanium pin-photovoltaic cells at  
high incident radiation intensity  
09 p0013 A76-14781

## M

**MAGNETIC COILS**  
Design of a force-free inductive storage coil  
[LA-5953-MS] 10 p0079 N76-19347

**MAGNETIC CONTROL**  
Progress in laser-solenoid fusion  
09 p0009 A76-14163

**MAGNETIC EFFECTS**  
Magnetic enhancement of laser amplifier energy  
storage capability  
10 p0059 A76-26076

**MAGNETIC INDUCTION**  
The MHD induction converter compensated by  
superposition  
09 p0016 A76-17056

## MAGNETIC MEASUREMENT

Audiomagnetotelluric sounding as a reconnaissance  
exploration technique in Long Valley, California  
--- for geothermal resources  
10 p0053 A76-22115

## MAGNETIC MIRRORS

Fusion reactors --- U.S.S.R. Tokamak, stellarator  
and mirror machine projects  
09 p0006 A76-13541

## MAGNETIC SURVEYS

Audiomagnetotelluric sounding as a reconnaissance  
exploration technique in Long Valley, California  
--- for geothermal resources  
10 p0053 A76-22115

## MAGNETOHYDRODYNAMIC GENERATORS

Magnetohydrodynamic converters of a new type  
09 p0002 A76-10695

Investigation of the optimal characteristics of a  
magnetohydrodynamic generator for an open-cycle  
combination magnetohydrodynamic electric-power  
plant --- using one dimensional channel flow model  
09 p0009 A76-14108

The MHD induction converter compensated by  
superposition  
09 p0016 A76-17056

Thermodynamic analysis of a coal fired MHD power  
cycle with chemical heat regeneration  
09 p0016 A76-17057

Investigation of some factors, limiting enthalpy  
extraction of MHD-generators  
09 p0016 A76-17060

Investigation of a high-efficiency MHD generator  
with nonequilibrium conductivity  
09 p0017 A76-17746

Experimental study of heat transfer in the channel  
of an open-cycle magnetohydrodynamic generator  
10 p0050 A76-21041

Unconventional energy converters --- German book  
10 p0054 A76-23166

Introduction of an ionizable additive in the form  
of an aqueous solution of K2CO3 of high  
temperature and concentration --- for MHD  
generators  
10 p0057 A76-25536

An overall program for the development of open  
cycle MHD power generation  
[PB-242585/8] 09 p0022 N76-11585

Closed cycle MHD power generation experiments  
using a helium-cesium working fluid in the NASA  
Lewis Facility  
[NASA-TM-X-71885] 10 p0091 N76-21679

New developments in the area of  
magnetohydrodynamic current generators  
[AD-A017803] 10 p0094 N76-21721

**MANAGEMENT INFORMATION SYSTEMS**  
A computerized information system on the impacts  
of coal fired energy development in the Southwest  
09 p0036 N76-15571

## MANAGEMENT METHODS

Feasibility of transportation projects: An  
energy-based methodology  
09 p0026 N76-12891

Staff report to the Federal Trade Commission on  
the structure, conduct and performance of the  
Western States Petroleum Industry  
[PB-245855/2] 10 p0080 N76-19571

## MANUFACTURING

Studies of the use of high-temperature nuclear  
heat from an HTGR for hydrogen production  
[NASA-CR-134919] 09 p0037 N76-15574

Hydrogen from coal  
09 p0037 N76-15576

Production of hydrogen by direct gasification of  
coal with steam using nuclear heat  
09 p0037 N76-15577

Hydrogen manufacture by Lurgi gasification of  
Oklahoma coal  
09 p0037 N76-15578

Ispra Mark-10 water splitting process  
09 p0037 N76-15580

Process description  
09 p0037 N76-15582

## MARINE PROPULSION

Alternate energy sources for marine power plants  
[COM-75-11474/4] 10 p0078 N76-18688

## MARKET RESEARCH

Some marketing and technical considerations of  
wind power  
10 p0065 A76-28233

- Supply options --- hydrogen market  
10 p0075 N76-18656
- MARKETING**  
Analysis of steam coal sales and purchases  
[PB-243575/8] 09 p0034 N76-14631  
Studies of the use of heat from high temperature  
nuclear sources for hydrogen production processes  
[NASA-CR-134918] 09 p0038 N76-15599  
Proceedings: The Role of the US Railroads in  
Meeting the Nation's Energy Requirements  
[PB-245565/7] 10 p0080 N76-19572
- MARYLAND**  
Energy balance for the Washington metropolitan  
area for 1973  
[PB-245391/8] 10 p0084 N76-20644
- MASS TRANSFER**  
Transport of mass and energy in porous media due  
to natural convection. The geothermal basin  
problem  
[PB-247087/0] 10 p0096 N76-21739
- MATERIALS HANDLING**  
Fuel cycle issues in perspective --- for nuclear  
power plants  
09 p0007 A76-13904
- MATERIALS RECOVERY**  
An impact analysis of a micro wind system ---  
windpower for recovering magnesium from stack dust  
10 p0054 A76-23113  
Pyrolysis system and process --- recovering energy  
from solid wastes containing hydrocarbons  
[NASA-CASE-HSC-12669-1] 10 p0071 N76-16621  
Base line forecasts of resource recovery, 1972 to  
1990  
[PB-245924/6] 10 p0079 N76-19545
- MATERIALS SCIENCE**  
Progress in new low cost processing methods ---  
solar array fabrication  
09 p0011 A76-14764
- MATERIALS TESTS**  
Practical aspects of solar heating - A review of  
materials use in solar heating applications  
09 p0014 A76-15365
- MATHEMATICAL MODELS**  
A methodology for assessing reliability of coal  
conversion plants  
[AAS PAPER 75-293] 09 p0005 A76-12841  
Economic optimization models of windpower systems  
09 p0016 A76-16843  
Analysis of polyphase commutator generator for  
wind-power applications  
10 p0048 A76-20780  
A theory of concentrators of solar energy on a  
central receiver for electric power generation  
[ASME PAPER 75-WA/SOL-1] 10 p0051 A76-21969  
Simulation of a small solar-power station  
[ASME PAPER 75-WA/SOL-4] 10 p0052 A76-21972  
Thermal response and model of heating and cooling  
equipment for residential homes --- mathematical  
models of energy requirements  
[PB-244991/6] 10 p0071 N76-16631  
Periodic control of vehicle cruise: Improved fuel  
economy by high and low frequency switching ---  
mathematical models of aircraft control during  
cruising flight for aircraft fuel consumption  
reduction  
[AD-A015927] 10 p0089 N76-20886
- METAL FATIGUE**  
Hydrogen problems in energy related technology ---  
metal degradation and embrittlement  
10 p0047 A76-20072
- METAL FILMS**  
Fabrication and investigation of foam-film faceted  
collectors --- solar collector with parabolic  
reflectors  
10 p0056 A76-24950
- METAL HYDRIDES**  
Metal hydrides for energy storage applications  
[AD-A014174] 09 p0036 N76-15309
- METAL MATRIX COMPOSITES**  
Expenditure of energy in the free forging of  
reinforced metal composites  
09 p0006 A76-13386
- METAL SHEETS**  
Impact of energy developments on the sheet metal  
industry  
[PB-244274/7] 09 p0041 N76-15630  
Strategic implications of solar energy for  
employment of sheet metal workers  
[PB-245670/5] 10 p0072 N76-16648
- METAL VAPORS**  
Mixed metal vapor phase matching for  
third-harmonic generation  
10 p0046 A76-19591
- METAL-GAS SYSTEMS**  
Hydrogen sorption in LaNi5  
10 p0067 A76-28397
- METHANE**  
Biological conversion of organic refuse to methane  
[PB-245795/0] 10 p0085 N76-20658  
Biological conversion of organic refuse to methane  
[PB-247751/1] 10 p0095 N76-21733
- METHYL ALCOHOLS**  
Methanol production from coal, section 1  
[PB-246201/8] 10 p0085 N76-20659
- MICROWAVE TRANSMISSION**  
The Satellite Solar Power Station - A new frontier  
to space technology  
09 p0004 A76-11702  
The satellite solar power station - A focus for  
future Space Shuttle missions  
[AAS PAPER 75-281] 09 p0005 A76-12840  
Satellite solar-power stations  
09 p0014 A76-15048  
The status of the satellite solar power station  
10 p0067 A76-28478
- MILITARY AIR FACILITIES**  
Alternative energy sources for United States Air  
Force installations  
[AD-A014858] 10 p0073 N76-17649
- MILITARY TECHNOLOGY**  
Status of ERDA-DOD applications plans  
09 p0024 N76-12479
- MINERAL DEPOSITS**  
The reserve base of coal for underground mining in  
the western United States  
[PB-244909/8] 09 p0036 N76-15569  
Reserve and resource estimation, appendix D  
[PB-248063/0] 10 p0090 N76-21670
- MINERAL EXPLORATION**  
Exploration for fossil and nuclear fuels from  
orbital altitudes  
09 p0015 A76-15454  
Audiomagnetotelluric sounding as a reconnaissance  
exploration technique in Long Valley, California  
--- for geothermal resources  
10 p0053 A76-22115  
Some elements of the theory of the search for  
useful minerals  
10 p0068 A76-28691
- MINERALS**  
Energy and other non-renewable resources  
10 p0078 N76-18971  
Energy use patterns in metallurgical and  
nonmetallic mineral processing. Phase 4:  
Energy data and flowsheets, high-priority  
commodities  
[PB-245759/6] 10 p0080 N76-19576
- MINES (EXCAVATIONS)**  
Operations study of selected surface coal mining  
systems in the United States  
[PB-245085/6] 10 p0070 N76-16610
- MINING**  
The reserve base of coal for underground mining in  
the western United States  
[PB-244909/8] 09 p0036 N76-15569  
Energy requirements in Minnesota iron ore and  
taconite mining 1953 - 2000  
[PB-248055/6] 10 p0095 N76-21727
- MINNESOTA**  
Energy requirements in Minnesota iron ore and  
taconite mining 1953 - 2000  
[PB-248055/6] 10 p0095 N76-21727
- MIRRORS**  
Principles of cylindrical concentrators for solar  
energy  
09 p0003 A76-11190  
Collecting capacity of solar-array mirror systems  
- The effect of geometrical factors --- on  
radiant flux density  
10 p0056 A76-24949  
Transparent heat mirrors for solar-energy  
applications  
10 p0062 A76-26719
- MIS (SEMICONDUCTORS)**  
Low cost AMOS solar cell development  
09 p0024 N76-12498

## MISSION PLANNING

Mission analysis of photovoltaic conversion of solar energy for terrestrial applications  
09 p0011 A76-14757

## MODELS

Systems of cybernetic simulation of power systems  
--- models of power supplies and circuits, energy policy  
[BLL-CE-TRANS-6723-(9022.09)] 09 p0032 N76-14597

## MONTE CARLO METHOD

Energy-storage requirements reduced in coupled wind-solar generating systems  
10 p0060 A76-26151

## N

## NASA PROGRAMS

The U.S.-NSF/NASA  
10 p0067 A76-28250  
Aircraft fuel efficiency program --- energy policy, fuel consumption of transport aircraft - NASA programs  
[GPO-60-208] 09 p0036 N76-15163  
Energy-related research and development  
[GPO-51-189] 10 p0083 N76-20630

## NATURAL GAS

Solar-assisted gas-energy water-heating feasibility for apartments  
09 p0002 A76-11188  
Gasification gases of coke, coal, benzol, and petroleum and cracking products of natural gas with air-water vapor mixtures  
10 p0057 A76-25224

Natural Gas Production and Conservation Act of 1974  
[GPO-47-272] 09 p0022 N76-12455

Energy information reported to congress: As required by Public Law 930319, First Quarter 1975  
[PB-242760/0] 09 p0027 N76-13587

The energy crisis and proposed solutions. Part 3: Petroleum supply, gas and other energy sources, automobile efficiency and conservation  
[GPO-50-130] 09 p0033 N76-14608

State/federal regulation of natural gas  
[PB-243339/9] 09 p0034 N76-14620

Federal involvement in the development of eastern oil and gas shale  
[GPO-54-728] 10 p0071 N76-16628

Federal energy management program, fiscal year 1975  
[PB-246314/9] 10 p0079 N76-19566

The phasing out of natural gas and oil for electric power generation. Southwest Power Pool and Electric Reliability Council of Texas. Part 1: Present electric utility program, 1975 - 1984  
[PB-245570/7] 10 p0080 N76-19578

Energy information reported to Congress as required by public law 93-319, second quarter 1975 --- coal, natural gas, crude oil, nuclear energy, electricity  
[PB-242760/02] 10 p0081 N76-19583

Oil and gas resources, reserves, and productive capacities, volume 1  
[PB-246354/5] 10 p0082 N76-20617

Evaluation of new energy sources for process heat  
[PB-245604/4] 10 p0084 N76-20646

A comparison of two natural gas forecasting models: TERRA and MacAvoy-Pindyck  
[PB-246219/0] 10 p0087 N76-20673

Comparison of FEA figures with Interior Committee staff analysis of the President's energy program  
[PB-246209/1] 10 p0087 N76-20674

SAGE: Solar Assisted Gas Energy  
[PB-246044/2] 10 p0088 N76-20691

Energy data requirements of the Federal Government: Part 3: Federal offshore oil and gas leasing policies  
[GPO-35-032] 10 p0089 N76-21033

Oil and gas resources, reserves, and productive capacities, volume 2  
[PB-246355/2] 10 p0090 N76-21667

Economic evaluation manual  
[PB-247640/6] 10 p0097 N76-22114

Natural Gas Emergency Standby Act of 1975  
[PB-247306/4] 10 p0097 N76-22118

## NEODYMIUM

Neodymium glass lasers - A status report --- fusion research applications  
10 p0059 A76-26074

## NEUTRAL BEAMS

The potential of driven Tokamaks as thermonuclear reactors  
09 p0005 A76-12382

## NEUTRON ACTIVATION ANALYSIS

Neutron activation analysis applied to energy and environment  
[CONF-750928-2] 10 p0093 N76-21709

## NEUTRON SOURCES

The energy crisis and a potential laser-fusion solution  
10 p0046 A76-19400

## NEVADA

Evaluation of geothermal activity in the Truckee Meadows, Washoe County, Nevada  
[PB-247297/5] 10 p0096 N76-21736

## NEW MEXICO

New Mexico energy research resource registry. Researchers and facilities  
[NASA-CR-146330] 10 p0075 N76-18640  
Evaluation of the Solar Building, Albuquerque, New Mexico  
[PB-245392/6] 10 p0080 N76-19580

## NICKEL ALLOYS

Expenditure of energy in the free forging of reinforced metal composites  
09 p0006 A76-13386

Hydrogen sorption in LaNi5  
10 p0067 A76-28397

## NICKEL COATINGS

Solar absorptance and emittance properties of several solar coatings  
10 p0062 A76-27145

## NITINOL ALLOYS

Experimental work on the use of memory alloy NiTi as drive for deployment of antennas and solar cell arrays --- energy conversion by phase transformations  
[BMFT-PB-W-75-09] 09 p0036 N76-15257

## NONEQUILIBRIUM PLASMAS

Investigation of a high-efficiency MHD generator with nonequilibrium conductivity  
09 p0017 A76-17746

## NONFERROUS METALS

Study of the energy and fuel-use patterns in the nonferrous metals industries  
[PB-245194/6] 10 p0069 N76-16227

## NORTH CAROLINA

The role of North Carolina in regulating offshore petroleum development  
[COM-75-10854/8] 09 p0022 N76-12458

## NORTH SEA

Oil from beneath Britain's seas  
10 p0063 A76-27698

## NUCLEAR ELECTRIC POWER GENERATION

Optical methods in energy conversion; Proceedings of the Seminar, Rochester, N.Y., June 23-25, 1975  
10 p0059 A76-26067

Nuclear energy waste-space transportation and removal  
[NASA-TN-X-64973] 10 p0069 N76-16173

Evaluation of conventional power systems --- emphasizing fossil fuels and nuclear energy  
[NASA-CR-146344] 10 p0076 N76-18675

## NUCLEAR ENERGY

Prospects for the development of nuclear energy  
09 p0005 A76-12626

Production of hydrogen by direct gasification of coal with steam using nuclear heat  
09 p0037 N76-15577

Studies of the use of heat from high temperature nuclear sources for hydrogen production processes  
[NASA-CR-134918] 09 p0038 N76-15599

Oversight hearings on nuclear energy: Over-view of the major issues, part 1  
[GPO-52-367] 09 p0038 N76-15601

Assessment of industrial energy options based on coal and nuclear systems  
[ORNL-4995] 10 p0079 N76-19565

Energy information reported to Congress as required by public law 93-319, second quarter 1975 --- coal, natural gas, crude oil, nuclear energy, electricity  
[PB-242760/02] 10 p0081 N76-19583

Atomic energy legislation through 93rd Congress, 2nd Session  
[GPO-49-939] 10 p0081 N76-20029

## NUCLEAR FISSION

The necessity of fission power 09 p0015 A76-16541

## NUCLEAR FUELS

Hierarchical systematics of fusion-fission energy systems 09 p0005 A76-12391

Fuel cycle issues in perspective --- for nuclear power plants 09 p0007 A76-13904

Exploration for fossil and nuclear fuels from orbital altitudes 09 p0015 A76-15454

The coal future: Economic and technological analysis of initiatives and innovations to secure fuel supply independence, appendix B --- nuclear power plants [PB-247679/4] 10 p0096 A76-21735

## NUCLEAR FUSION

The potential of driven Tokamaks as thermonuclear reactors 09 p0005 A76-12382

Laser systems for high peak-power applications [LA-UR-75-1757] 10 p0082 A76-20470

Exploratory discussions concerning a possible EPRI/Kurchatov Institute joint program on fusion power [PB-247269/4] 10 p0094 A76-21725

Fusion power by magnetic confinement --- project planning of electric power plants utilizing Tokamak fusion reactors [ERDA-11] 10 p0097 A76-22049

Fusion power: The transition from fundamental science to fusion reactor engineering [UCRL-77055] 10 p0097 A76-22051

Laser fusion, an overview [LA-UR-75-660] 10 p0097 A76-22059

## NUCLEAR POWER PLANTS

Nuclear power in the Shuttle era --- electric power reactor systems assessment [AAS PAPER 75-283] 09 p0006 A76-12842

Thermal nuclear powerstations --- uranium fueled-graphite moderated reactor parameters 09 p0006 A76-13139

Fuel cycle issues in perspective --- for nuclear power plants 09 p0007 A76-13904

A general review of closed-cycle gas turbines using fossil, nuclear and solar energy --- Book 10 p0047 A76-20098

Texas nuclear power policies. Volume 1: Introduction and background [PB-243352/2] 09 p0031 A76-13904

The coal future: Economic and technological analysis of initiatives and innovations to secure fuel supply independence, appendix B --- nuclear power plants [PB-247679/4] 10 p0096 A76-21735

## NUCLEAR POWER REACTORS

Status of central station nuclear power reactors: Significant milestones [ERDA-30(4/75)] 10 p0093 A76-21712

Fusion power: The transition from fundamental science to fusion reactor engineering [UCRL-77055] 10 p0097 A76-22051

## NUTRITION

Multiple nutrient markers. Energy and nutrient [NASA-CR-144635] 09 p0035 A76-14806

## O

## OCEAN CURRENTS

Design and optimization of the power cycle and the heat exchangers for an ocean thermal power system 10 p0079 A76-19550

## OCEAN SURFACE

Ocean thermal power plants 09 p0009 A76-14161

## OCEANS

Power turbines for Ocean Thermal Energy Conversions systems [ASME PAPER 75-WA/OCE-11] 10 p0051 A76-21960

Solar sea power [PB-242263/2] 09 p0021 A76-11579

Ocean thermal energy conversion: A model approach [AD-A015954] 10 p0078 A76-18691

## OFFSHORE ENERGY SOURCES

Ocean thermal power plants 09 p0009 A76-14161

Offshore oil: Technology - and emotion

Oil spills and offshore petroleum 10 p0056 A76-24820

Oil from beneath Britain's seas 10 p0056 A76-24821

Thermal energy from the sea --- Book 10 p0063 A76-27698

Major electric equipment cost figures for solar sea power plants 10 p0063 A76-27897

[PB-242156/8] 09 p0022 A76-11583

The role of North Carolina in regulating offshore petroleum development [CON-75-10854/8] 09 p0022 A76-12458

Outer Continental Shelf Lands Act amendments and Coastal Zone Management Act amendments, part 2 [GPO-51-748] 09 p0043 A76-15928

Benefits of VTOL aircraft in offshore petroleum logistics support [NASA-TN-X-73098] 10 p0074 A76-18087

Outer Continental Shelf Management Act of 1975 [S-REPT-94-284] 10 p0078 A76-19001

Energy data requirements of the Federal Government: Part 3: Federal offshore oil and gas leasing policies [GPO-35-032] 10 p0089 A76-21033

## OFFSHORE PLATFORMS

Suitability of Guam from an environmental aspect as a potential site for ocean thermal energy conversion plants [AD-A012500] 09 p0026 A76-12529

Concept analysis, offshore breakwater-oil storage system [AD-A010348] 10 p0082 A76-20550

## OIL EXPLORATION

Offshore oil: Technology - and emotion

Oil from beneath Britain's seas 10 p0056 A76-24820

The tradeoff between energy and the environment: The case of crude oil supplies for California 10 p0069 A76-16508

## OIL FIELDS

Offshore oil: Technology - and emotion

Oil from beneath Britain's seas 10 p0056 A76-24820

Depth and producing rate classification of petroleum reservoirs in the United States, 1971 [PB-244368/7] 09 p0032 A76-14593

Energy data requirements of the Federal Government: Part 3: Federal offshore oil and gas leasing policies [GPO-35-032] 10 p0089 A76-21033

Oil and gas resources, reserves, and productive capacities, volume 2 [PB-246355/2] 10 p0090 A76-21667

## OIL RECOVERY

Review of secondary and tertiary recovery of crude oil [PB-244970/0] 09 p0036 A76-15567

Identification of research and development priorities and of costing problems associated with implementation on in situ recovery of shale oil [PB-246278/6] 10 p0086 A76-20666

## OIL SLICKS

Oil spills and offshore petroleum 10 p0056 A76-24821

## OPERATING TEMPERATURE

The theoretical performance of the lithium bromide-water intermittent absorption refrigeration cycle 09 p0009 A76-14094

## OPERATIONAL PROBLEMS

Thermoemission energy converter with impulse ionization 10 p0075 A76-18650

## OPERATIONS RESEARCH

Operations study of selected surface coal mining systems in the United States [PB-245085/6] 10 p0070 A76-16610

## OPTICAL PROPERTIES

Optical diagnostics of combustion processes 10 p0059 A76-26071

## OPTICAL REFLECTION

Solar thermal power system based on optical transmission 10 p0060 A76-26146

## OPTICS

Optical methods in energy conversion; Proceedings  
of the Seminar, Rochester, N.Y., June 23-25, 1975  
10 p0059 A76-26067

## OPTIMAL CONTROL

Application of optimization techniques to solar  
heating and cooling  
[AAS PAPER 75-108] 09 p0003 A76-11338  
Optimal energy conversion: Investigation of a  
Maximum Power Point Tracking (MPPT) system ---  
for solar generators of spacecraft power supply  
09 p0019 A76-10231

## OPTIMIZATION

Cost optimization of solar heating of buildings in  
northern regions  
[ASME PAPER 75-WA/SOL-9] 10 p0052 A76-21977

## ORGANIC MATERIALS

Preliminary assessment of systems for deriving  
liquid and gaseous fuels from waste or grown  
organics  
[NASA-TN-D-8165] 10 p0076 A76-18677

## ORGANIC WASTES (FUEL CONVERSION)

Biological conversion of organic refuse to methane  
[PB-245795/0] 10 p0085 A76-20658

## OUTPUT

Example of input-output analysis  
09 p0023 A76-12467

## OXIDE FILMS

Effects of interfacial oxide layers on the  
performance of silicon Schottky-barrier solar  
cells  
09 p0016 A76-17549

## P

## P-I-N JUNCTIONS

Performance of germanium pin-photovoltaic cells at  
high incident radiation intensity  
09 p0013 A76-14781

## P-N JUNCTIONS

The physical principles of the solar cell - An  
introduction  
09 p0003 A76-11695  
High efficiency graded band-gap  
Al<sub>x</sub>Ga<sub>1-x</sub>As-GaAs p-on-n solar cell  
09 p0013 A76-14780  
The depletion layer collection efficiency for p-n  
junction, Schottky diode, and surface insulator  
solar cells  
10 p0050 A76-21470  
Solar cells from gallium arsenide obtained by ion  
bombardment  
10 p0056 A76-24945

## P-TYPE SEMICONDUCTORS

Theoretical analysis of graded-band-gap  
gallium-aluminum arsenide/gallium arsenide  
p-Ga<sub>1-x</sub>Al<sub>x</sub>As/p-GaAs/n-GaAs solar cells  
10 p0051 A76-21769

## PACIFIC OCEAN

Suitability of Guam from an environmental aspect  
as a potential site for ocean thermal energy  
conversion plants  
[AD-A012500] 09 p0026 A76-12529  
Ocean thermal energy conversion research on an  
engineering evaluation and test program. Volume  
3: Baseline system concept  
[PB-246180/4] 10 p0079 A76-19567

## PARABOLIC REFLECTORS

Collecting capacity of solar-array mirror systems  
- The effect of geometrical factors --- on  
radiant flux density  
10 p0056 A76-24949  
Fabrication and investigation of foam-film faceted  
collectors --- solar collector with parabolic  
reflectors  
10 p0056 A76-24950

## PARABOLOID MIRRORS

Cost of paraboloidal collectors for solar to  
thermal electric conversion  
10 p0049 A76-20843  
Approximate solar-energy concentrator consisting  
of wedge-shaped facets of constant transverse  
curvature  
10 p0050 A76-21208

## PARAFFINS

Research on solar energy storage subsystems  
utilizing the latent heat of phase change of  
paraffin hydrocarbons for the heating and  
cooling of buildings  
[PB-244872/8] 10 p0072 A76-16635

## PARTICLE MOTION

The performance of electrogasdynamic expanders  
with slightly conducting walls  
10 p0057 A76-25396

## PENNSYLVANIA

Potential for conversion to coal as a fuel by  
major fuel users in the Pennsylvania counties of  
Bucks, Chester, Delaware, Montgomery and  
Philadelphia  
[PB-244946/0] 10 p0072 A76-16642

## PERFORMANCE

Hydrogen manufacture by Lurgi gasification of  
Oklahoma coal  
09 p0037 A76-15578  
Evaluation of the Solar Building, Albuquerque, New  
Mexico  
[PB-245392/6] 10 p0080 A76-19580

## PERFORMANCE PREDICTION

Analysis of polyphase commutator generator for  
wind-power applications  
10 p0048 A76-20780  
Theoretical analysis of graded-band-gap  
gallium-aluminum arsenide/gallium arsenide  
p-Ga<sub>1-x</sub>Al<sub>x</sub>As/p-GaAs/n-GaAs solar cells  
10 p0051 A76-21769

Theoretical performance of vertical axis wind  
turbines  
[ASME PAPER 75-WA/ENER-1] 10 p0051 A76-21877  
Assessment of a single family residence solar  
heating system in a suburban development  
setting. Solar heated residence technical  
research experiment  
[PB-242729/2] 09 p0025 A76-12520

## PERFORMANCE TESTS

The solar cell today - A report on recent  
improvements  
09 p0004 A76-11700  
Performance measurement of a large scale solar  
heating and cooling system  
09 p0009 A76-14521  
Performance characteristics of aerodynamically  
optimum turbines for wind energy generators  
09 p0010 A76-14621  
Performance of Cu<sub>x</sub>S-CdS solar cells after  
additional Cu-treatment  
09 p0013 A76-14790  
Evaluation of CdS solar cells as future contender  
for large scale electricity production  
09 p0013 A76-14792  
Assessment of the international workshop on CdS  
solar cells  
09 p0014 A76-14798

A generalized correlation of experimental  
flat-plate collector performance  
09 p0017 A76-18506

Experimental performance of three solar collectors  
10 p0049 A76-20842

Photovoltaic Test and Demonstration Project ---  
for solar cell power systems  
10 p0064 A76-28028

Review of the UK wind power programme 1948-1960  
10 p0064 A76-28228

Review of Terrestrial Photovoltaic Measurements  
Workshop  
09 p0024 A76-12480

Terrestrial photovoltaic power systems with  
sunlight concentration --- design analysis and  
performance tests  
[PB-244590/6] 09 p0040 A76-15625

The development and testing of a novel high  
temperature ceramic recuperator --- regenerators  
for waste energy utilization of industrial wastes  
[PB-245059/1] 10 p0069 A76-16240

Standardized performance tests of collectors of  
solar thermal energy: A selectively coated,  
steel collector with one transparent cover  
[NASA-TN-X-71870] 10 p0073 A76-17643

## PHASE TRANSFORMATIONS

Experimental work on the use of memory alloy NiTi  
as drive for deployment of antennas and solar  
cell arrays --- energy conversion by phase  
transformations  
[BNFT-PB-W-75-09] 09 p0036 A76-15257

## PHILIPPINES

A survey of the possible use of windpower in Thailand and the Philippines [PB-245609/3] 10 p0080 N76-19582

## PHOTOABSORPTION

Photothermal conversion --- of solar energy 10 p0045 A76-19094

## PHOTOCHEMICAL REACTIONS

The design requirements for a viable photochemical solar heating and cooling system 10 p0049 A76-20845

Photochemical conversion of solar energy --- by photovoltaic cells (using iron compounds) [PB-246156/4] 10 p0086 N76-20667

## PHOTODIODES

Silicon Schottky photovoltaic diodes for solar energy conversion 10 p0087 N76-20680

## PHOTODISSOCIATION

Photocatalytic generation of hydrogen from water 10 p0090 N76-21508

## PHOTOELECTRIC CELLS

Tungsten trioxide as a photoanode for a photoelectrochemical cell /PEC/ --- in solar energy conversion 10 p0062 A76-26689

## PHOTO GEOLOGY

Exploration for fossil and nuclear fuels from orbital altitudes 09 p0015 A76-15454

Space acquired imagery, a versatile tool in the development of energy sources 09 p0015 A76-15458

## PHOTOLYSIS

Solar photolysis of water [NASA-CASE-NPO-13675-1] 10 p0077 N76-18680

## PHOTOMAPPING

Multiscale aerial and orbital techniques for management of coal-mined lands 10 p0046 A76-19583

## PHOTOVOLTAIC CELLS

Solar house system interfaced with the power utility grid 09 p0004 A76-11699

An introduction to the theory of photovoltaic cells 09 p0008 A76-14016

Experiments on solar photovoltaic power generation using concentrator and liquid cooling 09 p0012 A76-14768

GaAs concentrator solar cells 09 p0013 A76-14778

Performance of germanium pin-photovoltaic cells at high incident radiation intensity 09 p0013 A76-14781

Simulation of silicon solar cells and comparison with experimental results 10 p0045 A76-19096

Industrial development of silicon solar cells 10 p0045 A76-19098

Materials for solar cells 10 p0046 A76-19099

Solar cells --- Book 10 p0048 A76-20650

Effect of constructional parameters on the temperature characteristics of silicon photoconverters 10 p0050 A76-21204

The depletion layer collection efficiency for p-n junction, Schottky diode, and surface insulator solar cells 10 p0050 A76-21470

Degradation of the characteristics of the thin-film photovoltaic cell Cu/x/S-CdS 10 p0056 A76-24943

Operation of a thin silicon solar cell with illumination from two sides 10 p0056 A76-24944

Solar cells from gallium arsenide obtained by ion bombardment 10 p0056 A76-24945

Status of ERDA-DOD applications plans 09 p0024 N76-12479

Review of Terrestrial Photovoltaic Measurements Workshop 09 p0024 N76-12480

Integrated photovoltaic-thermal solar energy conversion systems 09 p0024 N76-12483

Photovoltaic conversion of solar energy for terrestrial applications [NASA-CR-145966] 09 p0038 N76-15604

Terrestrial photovoltaic power systems with sunlight concentration --- design analysis and performance tests [PB-244590/6] 09 p0040 N76-15625

Photochemical conversion of solar energy --- by photovoltaic cells (using iron compounds) [PB-246156/4] 10 p0086 N76-20667

Silicon Schottky photovoltaic diodes for solar energy conversion [PB-246154/9] 10 p0087 N76-20680

Direct solar energy conversion for large scale terrestrial use. The CdS/Cu<sub>2</sub>S heterojunction in steady state [PB-246710/8] 10 p0088 N76-20684

## PHOTOVOLTAIC CONVERSION

Photovoltaic energy conversion under high radiation intensities 09 p0007 A76-13905

Mission analysis of photovoltaic conversion of solar energy for terrestrial applications 09 p0011 A76-14757

Business analysis of solar photovoltaic energy conversion 09 p0011 A76-14758

Mitre terrestrial photovoltaic energy system 09 p0011 A76-14759

EFG silicon ribbon solar cells --- Edge-defined Film-fed Grown 09 p0011 A76-14760

Integration of photovoltaic and solar-thermal energy conversion systems 09 p0012 A76-14767

II-VI photovoltaic heterojunctions for solar energy conversion 09 p0013 A76-14794

Theoretical and experimental photovoltaic energy conversion in an organic film system 09 p0016 A76-16705

Photovoltaic Test and Demonstration Project --- for solar cell power systems 10 p0064 A76-28028

Silicon Schottky photovoltaic diodes for solar energy conversion 09 p0024 N76-12499

Photovoltaic conversion of laser energy 10 p0090 N76-21509

## PHOTOVOLTAIC EFFECT

The photovoltaic effect and large scale utilization of solar energy 09 p0014 A76-15143

Becquerel effect solar cell --- using semiconductor electrode and electrolyte 10 p0057 A76-25392

## PHYSICAL PROPERTIES

Liquified natural gas, in France and throughout the world 10 p0062 A76-26846

## PHYSICAL WORK

Energy costs of specific custodial work tasks 09 p0035 N76-14753

## PILOT PLANTS

Solar thermal conversion central receiver pilot plant siting [PB-243752/3] 09 p0033 N76-14618

## PLASMA ACCELERATION

Investigation of some factors, limiting enthalpy extraction of MHD-generators 09 p0016 A76-17060

## PLASMA ACCELERATORS

Magnetohydrodynamic converters of a new type 09 p0002 A76-10695

## PLASMA CONDUCTIVITY

Investigation of a high-efficiency MHD generator with nonequilibrium conductivity 09 p0017 A76-17746

## PLASMA CONTROL

Steady-state thermonuclear power generation in a two-energy-component Astron device 09 p0005 A76-12392

Progress in laser-solenoid fusion 09 p0009 A76-14163

Tokamaks --- review 10 p0055 A76-24748

# SUBJECT INDEX

# PRODUCTION ENGINEERING

- PLASMA DECAY**  
Thermoemission energy converter with impulse ionization  
10 p0075 N76-18650
- PLASMA DIAGNOSTICS**  
Experimental study of heat transfer in the channel of an open-cycle magnetohydrodynamic generator  
10 p0050 A76-21041
- PLASMA HEATING**  
The basic technical characteristics of the demonstration tokamak fusion reactor /the T-20 device/  
10 p0047 A76-19918
- PLASTICS**  
Development of plastic heat exchangers for sea solar power plants  
[PB-242155/0]  
09 p0025 N76-12518
- POLITICS**  
The political economy of conservation  
10 p0091 N76-21687
- POLLUTION CONTROL**  
Electric utilities, Clean Air Act amendments, and sulfates  
[PB-243574/1]  
09 p0031 N76-13657  
Implementation plan review for Virginia as required by the Energy Supply and Environmental Coordination Act  
[PB-245833/9]  
10 p0081 N76-19616  
Evaluation of pollution control in fossil fuel conversion processes. Coal treatment. Section 1: Meyers process  
[PB-246311/5]  
10 p0086 N76-20665
- POLLUTION MONITORING**  
Space monitoring of the thermal impact of energy use  
09 p0015 A76-15660
- POLYMERIC FILMS**  
Theoretical and experimental photovoltaic energy conversion in an organic film system  
09 p0016 A76-16705
- POLYTETRAFLUOROETHYLENE**  
Fabrication and investigation of foam-film faceted collectors --- solar collector with parabolic reflectors  
10 p0056 A76-24950
- PONDS**  
The shallow solar pond energy conversion system  
10 p0060 A76-26143
- POROUS MATERIALS**  
Flow of fluids through porous, anisotropic, composite media with sources and sinks - Application to fuel cells  
10 p0057 A76-25394  
Transport of mass and energy in porous media due to natural convection. The geothermal basin problem  
[PB-247087/0]  
10 p0096 N76-21739
- POTASSIUM COMPOUNDS**  
Introduction of an ionizable additive in the form of an aqueous solution of K2CO3 of high temperature and concentration --- for MHD generators  
10 p0057 A76-25536
- POWER AMPLIFIERS**  
Magnetic enhancement of laser amplifier energy storage capability  
10 p0059 A76-26076
- POWER EFFICIENCY**  
Design considerations for large wind mills  
09 p0009 A76-14617  
How big is a windmill - Glauert revisited --- windpowered generator size-power relationship  
09 p0010 A76-14619  
Performance and structural design aspects of a one-bladed electric-power-generating windmill  
09 p0010 A76-14620  
Performance characteristics of aerodynamically optimum turbines for wind energy generators  
09 p0010 A76-14621  
Design of the IUE solar array  
09 p0011 A76-14737  
Cost and size estimates for an electrochemical bulk energy storage concept  
09 p0017 A76-18505  
Neodymium glass lasers - A status report --- fusion research applications  
10 p0059 A76-26074
- DC-generator and thyristor converter is a good alternative to AC-synchronous - for large wind generators  
10 p0067 A76-28252
- POWER LINES**  
Brookhaven program to develop a helium-cooled power transmission system --- superconducting power transmission for electric power lines  
[BNL-20444]  
10 p0093 N76-21705
- POWER SUPPLIES**  
Directions of research related to batteries and fuel cells with regard to the future supply of energy  
10 p0055 A76-24264  
Methodological aspects of reliability analysis of large-scale power systems  
10 p0060 A76-26320  
Reliability and redundancy problem for an integrated gas supply system  
10 p0061 A76-26322  
Reliability problem of heat-supply systems with hot redundancy  
10 p0061 A76-26324  
Systems of cybernetic simulation of power systems --- models of power supplies and circuits, energy policy  
[BLL-CE-TRANS-6723-(9022.09)]  
09 p0032 N76-14597
- POWER SUPPLY CIRCUITS**  
Control for nuclear thermionic power source --- power supply circuits, energy policy  
[NASA-CASE-NPO-13114-2]  
09 p0037 N76-15573
- POWER TRANSMISSION**  
The Satellite Solar Power Station - A new frontier to space technology  
09 p0004 A76-11702  
Satellite solar-power stations  
09 p0014 A76-15048
- PRIMARY BATTERIES**  
Review of candidate batteries for electric vehicles  
10 p0057 A76-25393
- PRINCIPLES**  
Conservation: Toward firmer ground  
10 p0092 N76-21688
- PRODUCT DEVELOPMENT**  
The Satellite Solar Power Station - A new frontier to space technology  
09 p0004 A76-11702  
Development of a high efficiency thin silicon solar cell --- fabrication and stability tests  
[NASA-CR-146770]  
10 p0084 N76-20641  
Brookhaven program to develop a helium-cooled power transmission system --- superconducting power transmission for electric power lines  
[BNL-20444]  
10 p0093 N76-21705
- PRODUCTION ENGINEERING**  
Economic viability of large wind generator rotors  
09 p0006 A76-13675  
Direct solar energy conversion for large scale terrestrial use  
09 p0024 N76-12492  
Survey of hydrogen production and utilization methods. Volume 1: Executive summary  
[NASA-CR-144127]  
09 p0038 N76-15590  
Survey of hydrogen production and utilization methods. Volume 2: Discussion  
[NASA-CR-144128]  
09 p0038 N76-15591  
Survey of hydrogen production and utilization methods. Volume 3: Appendixes  
[NASA-CR-144129]  
09 p0038 N76-15592  
Studies of the use of heat from high temperature nuclear sources for hydrogen production processes  
[NASA-CR-134918]  
09 p0038 N76-15599  
The effect of raw materials for steelmaking on energy requirements  
[PB-245058/3]  
10 p0069 N76-16226  
Fuel gas production from solid waste  
[PB-245083/1]  
10 p0069 N76-16243  
Electrolytic hydrogen production: An analysis and review  
[NASA-TM-X-71856]  
10 p0073 N76-17641  
Hydrogen production  
10 p0076 N76-18660  
Production cost methods and data  
10 p0076 N76-18665  
Materials considerations  
10 p0076 N76-18667  
Oil and gas resources, reserves, and productive capacities, volume 1  
[PB-246354/5]

## PROJECT MANAGEMENT

- Significance of zero power growth in 1974  
[PB-247517/6] 10 p0094 N76-21719
- PROJECT MANAGEMENT**
- The 1974 review of the research program  
[ERDA-39] 10 p0093 N76-21711
- PROJECT PLANNING**
- Northeast Utilities' participation in the  
Kaman/NASA wind power program 09 p0001 A76-10148
- Project proposal for surface-mined land  
enhancement (SMILE) 10 p0070 N76-16609
- A program to evaluate and demonstrate conservation  
of fossil fuel energy for single-family dwellings  
[PB-245064/1] 10 p0072 N76-16644
- Comparison of PEA figures with Interior Committee  
staff analysis of the President's energy program  
[PB-246209/1] 10 p0087 N76-20674
- Fusion power by magnetic confinement --- project  
planning of electric power plants utilizing  
Tokamak fusion reactors 10 p0097 N76-22049
- PROJECTS**
- Project plan hydrogen energy systems technology.  
Phase 1: Hydrogen energy systems technology study  
[NASA-CR-146424] 10 p0077 N76-18678
- PROPANE**
- The thermo-mechanical generator 10 p0061 A76-26645
- END-uses of petroleum products in the U.S.,  
1965-1975. Volume 1: Sources, methods and  
results 10 p0085 N76-20651
- END-uses of petroleum products in the U.S.,  
1965-1975. Volume 2: Tabulations of results  
[PB-246394/1] 10 p0085 N76-20652
- PROPELLER EFFICIENCY**
- Some marketing and technical considerations of  
wind power 10 p0065 A76-28233
- PROPULSION SYSTEM PERFORMANCE**
- Propulsion systems --- aircraft engine technology  
review 10 p0061 A76-26670
- R-32 energy storage propulsion system --- for  
rapid transit energy consumption reduction 10 p0063 A76-27800
- PROPULSIVE EFFICIENCY**
- Thrust in aircraft powerplants 09 p0002 A76-10842
- Improving aircraft energy efficiency 10 p0046 A76-19593
- Propulsion systems --- aircraft engine technology  
review 10 p0061 A76-26670
- PUBLIC LAW**
- Energy: The states' response: Energy legislation  
January - July 1975, volume 1 10 p0084 N76-20649
- Energy: The states' response: Energy legislation  
January - July, volume 2 10 p0085 N76-20650
- PULSED LASERS**
- Laser plasmas and nuclear energy --- Book 09 p0006 A76-13084
- PUMPS**
- Some results of full-scale tests of solar  
thermoelectric generators /STEG/ and method for  
calculating their efficiency 09 p0002 A76-10766
- PYROLYSIS**
- Pyrolysis system and process --- recovering energy  
from solid wastes containing hydrocarbons  
[NASA-CASE-MSC-12669-1] 10 p0071 N76-16621

## Q

- Q VALUES**
- The potential of driven Tokamaks as thermonuclear  
reactors 09 p0005 A76-12382

## R

- RADIATION ABSORPTION**
- Research applied to solar-thermal power  
conversion. Volume 1: Executive summary  
[PB-242086/7] 09 p0022 N76-11587

## SUBJECT INDEX

- RADIATION DISTRIBUTION**
- Solar radiation --- characteristics for energy  
conversion 10 p0045 A76-19093
- RADIATION EFFECTS**
- Photovoltaic Specialists Conference, 11th,  
Scottsdale, Ariz., May 6-8, 1975, Conference  
Record 09 p0011 A76-14727
- RADIATION SHIELDING**
- Effect of cover plate treatment on efficiency of  
solar collectors 09 p0002 A76-11185
- RADIOACTIVE WASTES**
- Nuclear energy waste-space transportation and  
removal 10 p0069 N76-16173
- RAIL TRANSPORTATION**
- Electricity for twentieth century transportation  
09 p0008 A76-13909
- Proceedings: The Role of the US Railroads in  
Meeting the Nation's Energy Requirements  
[PB-245565/7] 10 p0080 N76-19572
- Assured energy receptivity study --- power  
regeneration in electric trains 10 p0086 N76-20660
- RANKINE CYCLE**
- Solar sea power 09 p0025 N76-12515
- Design and optimization of the power cycle and the  
heat exchangers for an ocean thermal power system  
10 p0079 N76-19550
- RAPID TRANSIT SYSTEMS**
- Bringing logic to urban transportation innovation  
--- adaptation of automated guideway systems  
10 p0050 A76-21141
- R-32 energy storage propulsion system --- for  
rapid transit energy consumption reduction 10 p0063 A76-27800
- Assured energy receptivity study --- power  
regeneration in electric trains 10 p0086 N76-20660
- Assured energy receptivity program, phase 1 ---  
use of resistors to conserve energy in electric  
power supplies of rapid transit systems  
[PB-246245/5] 10 p0086 N76-20661
- Assured energy receptivity, a project overview ---  
use of resistors to conserve energy in electric  
power supplies of rapid transit systems  
[PB-246247/1] 10 p0086 N76-20662
- RAY TRACING**
- Linear Fresnel lens concentrators --- for solar  
power generation 09 p0008 A76-14090
- REACTOR DESIGN**
- The basic technical characteristics of the  
demonstration tokamak fusion reactor /the T-20  
device/ 10 p0047 A76-19918
- REACTOR MATERIALS**
- Materials considerations 10 p0076 N76-18667
- REACTOR TECHNOLOGY**
- The technological requirements for power by fusion  
09 p0004 A76-11846
- RECOMMENDATIONS**
- ECASTAR summary and recommendations 10 p0093 N76-21699
- REFINING**
- Petroleum refinery liquid wastes: Environmental,  
energy and economic impacts 09 p0019 N76-10565
- US petroleum refining capacity overview  
[PB-242831/6] 09 p0026 N76-12527
- Trends in refinery capacity and utilization,  
petroleum refineries in the United  
States-foreign refinery exporting centers  
[PB-244093/1] 09 p0039 N76-15613
- Staff report to the Federal Trade Commission on  
the structure, conduct and performance of the  
Western States Petroleum Industry  
[PB-245855/2] 10 p0080 N76-19571
- REFRIGERATING**
- The theoretical performance of the lithium  
bromide-water intermittent absorption  
refrigeration cycle 09 p0009 A76-14094

## SUBJECT INDEX

## RESOURCES

## REGENERATIVE FUEL CELLS

Fuel cells /revised and enlarged edition/ --- Book  
09 p0016 A76-17525

## REGENERATORS

The development and testing of a novel high temperature ceramic recuperator --- regenerators for waste energy utilization of industrial wastes [PB-245059/1] 10 p0069 N76-16240

## REGIONAL PLANNING

Effect of national transportation/energy policy on regional transportation phenomena 10 p0063 A76-27971

Regional patterns of energy consumption in the US, 1967 [PB-242689/8] 09 p0026 N76-12532

Energy supply/demand alternatives for the Appalachian region [PB-244621/9] 09 p0041 N76-15641

## REGULATIONS

State/federal regulation of natural gas [PB-243339/9] 09 p0034 N76-14620

## RELIABILITY ANALYSIS

A methodology for assessing reliability of coal conversion plants [AAS PAPER 75-293] 09 p0005 A76-12841

Reliability of solar energy-supply systems 10 p0050 A76-21210

Methodological aspects of reliability analysis of large-scale power systems 10 p0060 A76-26320

Reliability aspects of electric power systems 10 p0060 A76-26321

Reliability and redundancy problem for an integrated gas supply system 10 p0061 A76-26322

Reliability aspects of a crude oil supply system 10 p0061 A76-26323

Reliability problem of heat-supply systems with hot redundancy 10 p0061 A76-26324

A report on improving the productivity of electric powerplants [PB-242473/7] 09 p0030 N76-13630

## REMOTE SENSORS

Space exploration: Conversion and exploitation of solar energy; International Conference on Space, 15th, Rome, Italy, March 17-19, 1975, Proceedings 09 p0003 A76-11676

Remote sensing: Energy-related studies; Proceedings of the Symposium, Miami, Fla., December 2-4, 1974 09 p0015 A76-15451

Our national energy future - The role of remote sensing 09 p0015 A76-15452

## REQUIREMENTS

ECSTAR: Energy conservation. An assessment of systems, technologies and requirements [NASA-CR-145716] 09 p0023 N76-12464

## RESEARCH AND DEVELOPMENT

Review of current R & D program approaches to solar conversion 10 p0048 A76-20566

Future energy development and related environmental monitoring 10 p0058 A76-26007

Power sources 5; Research and development in non-mechanical electrical power sources; Proceedings of the Ninth International Symposium, Brighton, Sussex, England, September 17-19, 1974 10 p0061 A76-26633

Wind power --- Book 10 p0063 A76-27784

Survey of Oklahoma State University work in energy storage, variable speed constant frequency generators and wind generating systems 10 p0066 A76-28241

Wind energy research at the National Research Council of Canada 10 p0066 A76-28248

The U.S.-NSF/NASA 10 p0067 A76-28250

The Swedish wind energy R&D program proposal for three years 1975-77 10 p0067 A76-28251

ERDA authorization, 1976 and transition period overview [GPO-49-191] 10 p0081 N76-20030

Special energy research and development appropriations for fiscal year 1975 [GPO-32-023] 10 p0089 N76-21034

## RESEARCH FACILITIES

Experimental geothermal research facilities study (phase 0), volume 1 [PB-243755/6] 09 p0039 N76-15616

Experimental geothermal research facilities study (phase 0), volume 2 [PB-243756/4] 09 p0039 N76-15617

New Mexico energy research resource registry. Researchers and facilities [NASA-CR-146330] 10 p0075 N76-18640

## RESEARCH MANAGEMENT

Status of ERDA-DOD applications plans 09 p0024 N76-12479

National priorities and Federal research and development programs --- solid waste utilization [GPO-40-686] 09 p0035 N76-14972

On mathematics in energy research [AD-A016654] 10 p0078 N76-18686

## RESEARCH PROJECTS

Sandia's Solar Total Energy Program 09 p0014 A76-15364

The 1974 review of the research program [ERDA-39] 10 p0093 N76-21711

Fusion power: The transition from fundamental science to fusion reactor engineering [UCRL-77055] 10 p0097 N76-22051

## RESIDENTIAL AREAS

Assessment of a single family residence solar heating system in a suburban development setting [PB-242728/4] 09 p0025 N76-12521

Assessment of a single family residence solar heating system in a suburban development setting [PB-243548/5] 09 p0029 N76-13611

Technical aspects of efficient energy utilization: 1974 summer study of the American Physical Society --- energy policy and technology assessment of energy technology for cities and residential areas [PB-243116/1] 09 p0030 N76-13628

The impact of and potential for energy conservation practices in residential and commercial buildings in Texas --- energy policy [PB-243323/3] 09 p0033 N76-14617

Thermal response and model of heating and cooling equipment for residential homes --- mathematical models of energy requirements [PB-244991/6] 10 p0071 N76-16631

Assessment of a single family residence solar heating system in a suburban development setting [PB-246141/6] 10 p0080 N76-19575

Development of a solar-powered residential air conditioner [NASA-CR-144234] 10 p0083 N76-20632

Energy conservation and the residential and commercial sector 10 p0092 N76-21693

Retrofitting a residence for solar heating and cooling: The design and construction of the system [PB-247482/3] 10 p0095 N76-21730

## RESISTORS

Assured energy receptivity program, phase 1 --- use of resistors to conserve energy in electric power supplies of rapid transit systems [PB-246245/5] 10 p0086 N76-20661

Assured energy receptivity, a project overview --- use of resistors to conserve energy in electric power supplies of rapid transit systems [PB-246247/1] 10 p0086 N76-20662

## RESOURCE ALLOCATION

Legal aspects of state-owned oil and gas energy resources [PB-243337/3] 09 p0031 N76-13979

Legal and regulatory policy aspects of energy allocation [PB-243336/5] 09 p0031 N76-13980

Energy information reported to congress as required by Public Law 93-319 [PB-244606/0] 09 p0039 N76-15615

Allocation models for energy planning 10 p0074 N76-18638

## RESOURCES

Texas energy resources --- fuels, energy policy [PB-243318/3] 09 p0030 N76-13623

RESOURCES MANAGEMENT

- Remote sensing: Energy-related studies;  
Proceedings of the Symposium, Miami, Fla.,  
December 2-4, 1974 09 p0015 A76-15451
- Our national energy future - The role of remote  
sensing 09 p0015 A76-15452
- Space acquired imagery, a versatile tool in the  
development of energy sources 09 p0015 A76-15458
- Financial incentives for the adoption of solar  
energy design - Peak-load pricing of back-up  
systems 10 p0049 A76-20841
- The role of environmental data banks in energy  
resource development 10 p0058 A76-25960
- Resources and utilization of Texas lignite

# SUBJECT INDEX

# SILICON JUNCTIONS

## SCHOOLS

Solar heating proof-of-concept experiment for a public school building  
[PB-245008/8] 10 p0072 N76-16636

## SCHOTTKY DIODES

Improved Schottky barrier solar cells  
09 p0012 A76-14776

Effects of interfacial oxide layers on the performance of silicon Schottky-barrier solar cells  
09 p0016 A76-17549

Solar cells --- Book  
10 p0048 A76-20650

The depletion layer collection efficiency for p-n junction, Schottky diode, and surface insulator solar cells  
10 p0050 A76-21470

Silicon Schottky photovoltaic diodes for solar energy conversion  
[PB-246154/9] 10 p0087 N76-20680

## SEA WATER

Ocean thermal energy conversion: A model approach  
[AD-A015954] 10 p0078 N76-18691

## SEARCH PROFILES

Some elements of the theory of the search for useful minerals  
10 p0068 A76-28691

## SEMICONDUCTING FILMS

Peeled film technology for solar cells  
09 p0012 A76-14769

Thin-film conducting microgrids as transparent heat mirrors --- for solar energy application  
10 p0062 A76-27136

Solar absorptance and emittance properties of several solar coatings  
10 p0062 A76-27145

## SEMICONDUCTOR DEVICES

Investigation of the mechanical characteristics of a dc motor with power supply from a solar thermoelectrogenerator with commensurable power  
09 p0003 A76-11358

Effect of constructional parameters on the temperature characteristics of silicon photoconverters  
10 p0050 A76-21204

Application of granular semiconductors to photothermal conversion of solar energy  
10 p0057 A76-25120

Becquerel effect solar cell --- using semiconductor electrode and electrolyte  
10 p0057 A76-25392

## SEMICONDUCTOR JUNCTIONS

Analysis of vertical multijunction solar cells using a distributed circuit model  
09 p0008 A76-14022

II-VI photovoltaic heterojunctions for solar energy conversion  
09 p0013 A76-14794

## SEMICONDUCTORS (MATERIALS)

The photovoltaic effect and large scale utilization of solar energy  
09 p0014 A76-15143

Materials for solar cells  
10 p0046 A76-19099

## SERVICE LIFE

The physical principles of the solar cell - An introduction  
09 p0003 A76-11695

## SHALE OIL

Effect of fuel properties on performance of a single aircraft turbojet combustor --- from coal and oil-shale derived syncrudes  
10 p0047 A76-20150

The energy problem - Prospects for fossil, fission, and fusion power production  
10 p0059 A76-26068

Federal involvement in the development of eastern oil and gas shale  
[GPO-54-728] 10 p0071 N76-16628

Identification of research and development priorities and of costing problems associated with implementation on in situ recovery of shale oil  
[PB-246278/6] 10 p0086 N76-20666

Synthesis and analysis of jet fuels from shale oil and coal syncrudes  
[NASA-TN-X-73399] 10 p0089 N76-21341

## SHIPS

Alternate energy sources for marine power plants  
[COB-75-11474/4] 10 p0078 N76-18688

## SHORT CIRCUITS

Some comments on the evaluation of electrical parameters of a solar cell  
09 p0005 A76-12293

## SHORT HAUL AIRCRAFT

Short-range transports to save fuel  
10 p0047 A76-19598

## SHROUDS

Shrouds for aerogenerator  
[AIAA PAPER 76-181] 09 p0018 A76-18853

## SIERRA NEVADA MOUNTAINS (CA)

Geothermal investigations of the U.S. Geological Survey in Long Valley, California, 1972-1973  
10 p0053 A76-22111

Geothermal setting and simple heat conduction models for the Long Valley caldera  
10 p0053 A76-22113

Convective heat flow from hot springs in the Long Valley caldera, Mono County, California  
10 p0053 A76-22114

Audiomagnetotelluric sounding as a reconnaissance exploration technique in Long Valley, California --- for geothermal resources  
10 p0053 A76-22115

## SILICON

Current status of silicon solar cell technology  
[NASA-TN-X-71828] 09 p0019 N76-10566

Research applied to solar-thermal power conversion. Volume 2: Final report  
[PB-242087/5] 09 p0022 N76-11588

Silicon Schottky photovoltaic diodes for solar energy conversion  
[PB-246154/9] 10 p0087 N76-20680

## SILICON FILMS

EPG silicon ribbon solar cells --- Edge-defined Film-fed Growth  
09 p0011 A76-14760

Characteristics of a water absorber in front of a silicon solar cell  
10 p0062 A76-27132

## SILICON JUNCTIONS

Photovoltaic Specialists Conference, 11th, Scottsdale, Ariz., May 6-8, 1975, Conference Record  
09 p0011 A76-14727

In203/Si heterojunction solar cells  
09 p0012 A76-14777

Current status of silicon solar cell technology  
09 p0017 A76-18502

A study of efficiency in low resistivity silicon solar cells  
10 p0045 A76-19022

Simulation of silicon solar cells and comparison with experimental results  
10 p0045 A76-19096

Physical characterization of silicon solar cells by a study of spectral responses  
10 p0045 A76-19097

Industrial development of silicon solar cells  
10 p0045 A76-19098

Materials for solar cells  
10 p0046 A76-19099

Epitaxial solar cells on silicon EPG 'ribbon' substrates --- Edge Defined Growth process  
10 p0046 A76-19162

Resistivity dependence of silicon solar cell efficiency and its enhancement using a heavily doped back contact region  
10 p0050 A76-21145

Effect of constructional parameters on the temperature characteristics of silicon photoconverters  
10 p0050 A76-21204

High-voltage vertical multijunction solar cell  
10 p0051 A76-21471

Operation of a thin silicon solar cell with illumination from two sides  
10 p0056 A76-24944

Low cost silicon solar arrays  
09 p0023 N76-12474

Development of low cost thin film polycrystalline silicon solar cells for terrestrial applications  
09 p0024 N76-12484

Silicon Schottky photovoltaic diodes for solar energy conversion  
09 p0024 N76-12499

## SIMULATION

## SUBJECT INDEX

- A silicon junction solar energy converter  
09 p0032 N76-14599
- SIMULATION**  
Systems of cybernetic simulation of power systems  
--- models of power supplies and circuits,  
energy policy  
[BLL-CE-TRANS-6723-(9022.09)] 09 p0032 N76-14597
- SINGLE CRYSTALS**  
Integration of photovoltaic and solar-thermal  
energy conversion systems  
09 p0012 A76-14767
- Preparation and properties of InP/CdS and  
CuInSe<sub>2</sub>/CdS solar cells  
09 p0014 A76-14796
- Preparation and properties of InP/CdS solar cells  
10 p0051 A76-21472
- SOCIAL FACTORS**  
Hydrogen, socio-environmental impact  
10 p0076 N76-18668
- SOLAR ARRAYS**  
A solar energy power supply for terrestrial use  
09 p0004 A76-11701
- Photovoltaic Specialists Conference, 11th,  
Scottsdale, Ariz., May 6-8, 1975, Conference  
Record  
09 p0011 A76-14727

**SOLAR SIMULATION**

Simulation of a small solar-power station  
[ASME PAPER 75-WA/SOL-4] 10 p0052 A76-21972

**SOLAR SIMULATORS**

Central receiver solar thermal power system:  
Review and summary of available test facilities  
[PB-243751/5] 09 p0033 N76-14619

**SOLENOIDS**

Progress in laser-solenoid fusion 09 p0009 A76-14163

**SOLID STATE LASERS**

Neodymium glass lasers - A status report ---  
fusion research applications 10 p0059 A76-26074

**SOLID WASTES**

National priorities and Federal research and  
development programs --- solid waste utilization  
[GPO-40-686] 09 p0035 N76-14972

Characterizing combustible portions of urban  
refuse for potential use as fuel  
[PB-244780/3] 09 p0041 N76-15631

Technical evaluation study: Energy-recovery solid  
waste incineration to Naval Station, Mayport,  
Florida

[AD-A015615] 10 p0073 N76-17650

Technical evaluation study: Solid waste heat  
reclamation at Naval Air Test Center Patuxent,  
Maryland

[AD-A015613] 10 p0073 N76-17652

Base line forecasts of resource recovery, 1972 to  
1990

[PB-245924/6] 10 p0079 N76-19545

Potential for solid waste as an energy source in  
Texas

[PB-243351/4] 10 p0081 N76-19592

A technical, environmental and economic evaluation  
of the wet processing system for the recovery  
and disposal of municipal solid waste

[PB-245674/7] 10 p0081 N76-19617

Biological conversion of organic refuse to methane  
[PB-245795/0] 10 p0085 N76-20658

**SORPTION**

Hydrogen sorption in LaNi<sub>5</sub> 10 p0067 A76-28397

**SPACE COLONIES**

Space colonies and energy supply to the earth  
09 p0008 A76-13996

**SPACE EXPLORATION**

Space exploration: Conversion and exploitation of  
solar energy; International Conference on Space,  
15th, Rome, Italy, March 17-19, 1975, Proceedings  
[GPO] 09 p0003 A76-11676

**SPACE FLIGHT FEEDING**

Multiple nutrient markers. Energy and nutrient  
[NASA-CR-144635] 09 p0035 N76-14806

**SPACE MANUFACTURING**

Space colonies and energy supply to the earth  
09 p0008 A76-13996

**SPACE SHUTTLES**

The satellite solar power station - A focus for  
future Space Shuttle missions  
[AAS PAPER 75-281] 09 p0005 A76-12840

**SPACE TRANSPORTATION**

Nuclear energy waste-space transportation and  
removal  
[NASA-TM-X-64973] 10 p0069 N76-16173

**SPACE TUGS**

Lightweight fuel cell powerplant for Tug --- Space  
Tug  
[AAS PAPER 75-143] 09 p0005 A76-12789

**SPACECRAFT ANTENNAS**

Experimental work on the use of memory alloy NiTi  
as drive for deployment of antennas and solar  
cell arrays --- energy conversion by phase  
transformations

[BNFT-PB-W-75-09] 09 p0036 N76-15257

**SPACECRAFT POWER SUPPLIES**

Lightweight fuel cell powerplant for Tug --- Space  
Tug  
[AAS PAPER 75-143] 09 p0005 A76-12789

Electric power systems for space - A progress report  
09 p0009 A76-14100

Industrial development of silicon solar cells  
10 p0045 A76-19098

High-temperature solar heat sources for spacecraft  
--- Russian book

10 p0046 A76-19446

Solar cells --- Book  
10 p0048 A76-20650

Optimal energy conversion: Investigation of a  
Maximum Power Point Tracking (MPPT) system ---  
for solar generators of spacecraft power supply  
09 p0019 N76-10231

Thermoelectric power system --- for spacecraft  
[NASA-CASE-NFS-22002-1] 10 p0070 N76-16612

Application of high power lasers to space power  
and propulsion

10 p0090 N76-21515

**SPACECRAFT PROPULSION**

Application of high power lasers to space power  
and propulsion

10 p0090 N76-21515

**SPECTRAL ENERGY DISTRIBUTION**

Physical characterization of silicon solar cells  
by a study of spectral responses

10 p0045 A76-19097

**SPECTRAL REFLECTANCE**

Transparent heat mirrors for solar-energy  
applications

10 p0062 A76-26719

**SPLITTING**

Ispra Mark-10 water splitting process  
09 p0037 N76-15580

**SPRAY NOZZLES**

Introduction of an ionizable additive in the form  
of an aqueous solution of K<sub>2</sub>CO<sub>3</sub> of high  
temperature and concentration --- for MHD  
generators

10 p0057 A76-25536

**SPRINGS (WATER)**

The near-surface hydrothermal regime of Long  
Valley caldera

10 p0053 A76-22112

Geothermal setting and simple heat conduction  
models for the Long Valley caldera

10 p0053 A76-22113

Convective heat flow from hot springs in the Long  
Valley caldera, Mono County, California

10 p0053 A76-22114

**STABILITY TESTS**

Development of a high efficiency thin silicon  
solar cell --- fabrication and stability tests  
[NASA-CR-146770] 10 p0084 N76-20641

**STANDARDIZATION**

Standardized performance tests of collectors of  
solar thermal energy: A selectively coated,  
steel collector with one transparent cover  
[NASA-TM-X-71870] 10 p0073 N76-17643

**STANDARDS**

Energy use and the environment: The effects of  
environmental quality standards on the supply,  
demand, and price of fossil energy

09 p0035 N76-14641

Implementation plan review for Virginia as  
required by the Energy Supply and Environmental  
Coordination Act

[PB-245833/9] 10 p0081 N76-19616

**STAR TRACKERS**

A mount for continuously orienting a collector  
dish in a system adapted to perform both diurnal  
and seasonal solar tracking

[NASA-CASE-NFS-23267-1] 10 p0077 N76-18679

**STATISTICAL ANALYSIS**

Energy information reported to congress as  
required by Public Law 93-319  
[PB-244606/0] 09 p0039 N76-15615

Basic energy data and glossary of terms  
[GPO-53-220] 10 p0071 N76-16626

**STATISTICS**

Energy facts, 2  
[GPO-53-136] 10 p0091 N76-21684

**STEAM**

Production of hydrogen by direct gasification of  
coal with steam using nuclear heat

09 p0037 N76-15577

Process description

09 p0037 N76-15582

**STEEL STRUCTURES**

Standardized performance tests of collectors of  
solar thermal energy: A selectively coated,  
steel collector with one transparent cover  
[NASA-TM-X-71870] 10 p0073 N76-17643

**STEELS**

The effect of raw materials for steelmaking on  
energy requirements  
[PB-245058/3] 10 p0069 N76-16226

# STELLARATORS

# SUBJECT INDEX

## STELLARATORS

Fusion reactors --- U.S.S.R. Tokamak, stellarator and mirror machine projects 09 p0006 A76-13541

## STIRLING CYCLE

The thermo-mechanical generator 10 p0061 A76-26645  
Initial experiments with a laser driven Stirling engine 10 p0090 A76-21524

## STORAGE

Design of fossil-fuel power plant by-product resource storage areas 09 p0007 A76-13903

## STORAGE BATTERIES

Review of candidate batteries for electric vehicles 10 p0057 A76-25393  
Development of lithium-metal sulfide batteries for load leveling [PB-244390/1] 09 p0042 A76-15645

## STORAGE TANKS

Sea cache: A mobile Petroleum, Oils, Lubricants (POL) seafloor storage and supply system for advanced bases [AD-A004936] 09 p0036 A76-15323  
Concept analysis, offshore breakwater-oil storage system [AD-A010348] 10 p0082 A76-20550

## STRATEGY

Three strategies for conservation 09 p0023 A76-12468

## STRESS ANALYSIS

Nonlinear stress analysis of vertical-axis wind turbine blades [ASME PAPER 75-DET-35] 09 p0010 A76-14629

## STRESS CORROSION CRACKING

Hydrogen problems in energy related technology --- metal degradation and embrittlement 10 p0047 A76-20072

## STRIP MINING

Multiscale aerial and orbital techniques for management of coal-mined lands 10 p0046 A76-19583  
A net energy analysis of the use of Northern Great Plains surface mined coal in load center power plants 10 p0058 A76-25929  
Project proposal for surface-mined land enhancement (SHILE) [PB-245567/3] 10 p0070 A76-16609  
Operations study of selected surface coal mining systems in the United States [PB-245085/6] 10 p0070 A76-16610

## STRUCTURAL ANALYSIS

EPG-silicon ribbon solar cells --- Edge-defined Film-fed Grown 09 p0011 A76-14760  
Structural analysis of wind turbine rotors for NSF-NASA Mod-0 wind power system 10 p0065 A76-28234

## STRUCTURAL DESIGN

Construction and evaluation of linear segmented solar concentrators [ASME PAPER 75-WA/SOL-6] 10 p0052 A76-21974  
Reduction of wind powered generator cost by use of a one bladed rotor 10 p0065 A76-28235  
Advanced vertical axis rotor concepts --- for windpowered generators 10 p0065 A76-28236

## STRUCTURAL DESIGN CRITERIA

A solar energy power supply for terrestrial use 09 p0004 A76-11701  
Design considerations for large wind mills 09 p0009 A76-14617  
Performance and structural design aspects of a one-bladed electric-power-generating windmill 09 p0010 A76-14620  
Performance characteristics of aerodynamically optimum turbines for wind energy generators 09 p0010 A76-14621  
Concept selection and analysis of large wind generator systems 09 p0010 A76-14622  
100-kW hingeless metal wind turbine blade design, analysis and fabrication 09 p0010 A76-14623

## SUBSONIC AIRCRAFT

An early glimpse at long-term subsonic commercial turbofan technology requirements --- fuel conservation [AIAA PAPER 75-1207] 09 p0001 A76-10259

## SUBSTITUTES

Diversification of energy sources 10 p0093 A76-21697

## SUBSTRATES

Epitaxial solar cells on silicon EPG 'ribbon' substrates --- Edge Defined Growth process 10 p0046 A76-19162

## SUBURBAN AREAS

Assessment of a single family residence solar heating system in a suburban development setting [PB-242728/4] 09 p0025 A76-12521  
Assessment of a single family residence solar heating system in a suburban development setting [PB-243548/5] 09 p0029 A76-13611  
Assessment of a single family residence solar heating system in a suburban development setting [PB-246141/6] 10 p0080 A76-19575

## SULFUR

Sulfur content of crude oils [PB-245192/0] 10 p0070 A76-16611

## SULFUR DIOXIDES

Impact of energy shortage on ambient sulfur dioxide and particulate levels in metropolitan Boston AQCR [PB-246592/0] 10 p0089 A76-20741

## SUMMARIES

ECSTAR summary and recommendations 10 p0093 A76-21699

## SUPERCONDUCTING MAGNETS

Future prospects --- superconducting magnet and Josephson device development and applications 10 p0055 A76-23598  
Superconducting magnets in the world of energy, especially in fusion power 10 p0063 A76-27699

## SUPERCONDUCTING POWER TRANSMISSION

Brookhaven program to develop a helium-cooled power transmission system --- superconducting power transmission for electric power lines [BNL-20444] 10 p0093 A76-21705

## SUPERCONDUCTORS

Electrical machines with superconductors. III - Turbogenerators 10 p0062 A76-27122

## SUPERSONIC AIRCRAFT

Minimum energy, liquid hydrogen supersonic cruise vehicle study [NASA-CR-137776] 10 p0072 A76-17101

## SUPPLYING

Economic analysis of coal supply: An assessment of existing studies [PB-243220/1] 09 p0027 A76-13575  
Energy information reported to congress: As required by Public Law 930319, First Quarter 1975 [PB-242760/0] 09 p0027 A76-13587  
Relationship between supply/demand and pricing for alternate fuels in Texas: A study in elasticities [PB-243321/7] 09 p0031 A76-13977  
Situation and development of district heating in UNICHAL member countries [BLL-CE-TRANS-6668-(9022.09)] 09 p0032 A76-14594  
Analysis of steam coal sales and purchases [PB-243575/8] 09 p0034 A76-14631  
Energy supply demand/need and the gaps between. Volume 1: An overview [PB-243976/8] 09 p0040 A76-15620  
Energy supply, demand/need and the gaps between. Volume 2: Monograph, working papers and appendix papers [PB-243977/6] 09 p0040 A76-15621  
Supply options --- hydrogen market 10 p0075 A76-18656  
Potential heating oil shortages [GPO-24-027] 10 p0079 A76-19562  
National petroleum product supply and demand. Revised base case forecast and the President's program forecast [PB-246218/2] 10 p0088 A76-20690

## SUPPORTS

A mount for continuously orienting a collector dish in a system adapted to perform both diurnal and seasonal solar tracking [NASA-CASE-MPS-23267-1] 10 p0077 A76-18679

**SURFACE FINISHING**

Recent advancements in low cost solar cell processing 09 p0012 A76-14765

**SURFACE GEOMETRY**

Sensitivity of the power density of a surface-ionization thermionic converter to increases of the cathode surface area by surface relief 10 p0054 A76-23057

**SURFACE IONIZATION**

Sensitivity of the power density of a surface-ionization thermionic converter to increases of the cathode surface area by surface relief 10 p0054 A76-23057

**SURFACE LAYERS**

A new look at CdTe solar cells --- energy conversion efficiency computation 09 p0013 A76-14795

**SURFACE VEHICLES**

Electricity for twentieth century transportation 09 p0008 A76-13909

**SYNCHRONOUS SATELLITES**

Satellite solar-power stations 09 p0014 A76-15048

**SYNTHANE**

Coal conversion technology --- Book 10 p0062 A76-27125

**SYNTHETIC FUELS**

Some considerations involving hydrogen-rich automotive fuels 10 p0054 A76-22700  
Coal conversion technology --- Book 10 p0062 A76-27125  
Future synthetic fuels: A scientific and technical applications forecast [AD-A014947] 10 p0069 N76-16244

**SYSTEM EFFECTIVENESS**

Selection of design parameters for closed-circuit forced-circulation solar heating systems 10 p0049 A76-20839  
ECASAR: Energy Conservation; an Assessment of Systems, Technologies and Requirements [NASA-CR-146859] 10 p0091 N76-21686

**SYSTEMS**

ECASAR: Energy conservation. An assessment of systems, technologies and requirements [NASA-CR-145716] 09 p0023 N76-12464

**SYSTEMS ANALYSIS**

Concept selection and analysis of large wind generator systems 09 p0010 A76-14622  
Solar heating and cooling: Technical data and systems analysis [NASA-CR-144110] 09 p0037 N76-15587  
Solar heating and cooling: Technical data and systems analysis. Presentation charts (briefing to NASA 17 September, 1975) [NASA-CR-144111] 09 p0037 N76-15588  
ECASAR: Energy Conservation; an Assessment of Systems, Technologies and Requirements [NASA-CR-146859] 10 p0091 N76-21686

**SYSTEMS ENGINEERING**

Design, economic and system considerations of large wind-driven generators 10 p0063 A76-27900  
NECAP: NASA's Energy-Cost Analysis Program. Part 2: Engineering manual [NASA-CR-2590-PT-2] 09 p0020 N76-10752  
Project plan hydrogen energy systems technology. Phase 1: Hydrogen energy systems technology study [NASA-CR-146424] 10 p0077 N76-18678

**T****TABLES (DATA)**

Energy information reported to congress as required by Public Law 93-319 [PB-244606/0] 09 p0039 N76-15615

**TECHNOLOGICAL FORECASTING**

Man's energy problems - Outlook for intense exploitation of solar energy 09 p0003 A76-11694  
Solar energy and the future --- review of conversion techniques and experimental programs 09 p0004 A76-11698  
Prospects for the development of nuclear energy 09 p0005 A76-12626

Nuclear power in the Shuttle era --- electric power reactor systems assessment [AAS PAPER 75-283] 09 p0006 A76-12842  
Future energy demand and the role of solar energy 10 p0045 A76-19092  
Bringing logic to urban transportation innovation --- adaptation of automated guideway systems 10 p0050 A76-21141  
Future prospects --- superconducting magnet and Josephson device development and applications 10 p0055 A76-23598  
National petroleum product supply and demand, 1975 [PB-243413/2] 09 p0034 N76-14624

# TECHNOLOGY TRANSFER

# SUBJECT INDEX

Assessment of fuels for power generation by electric utility fuel cells [PB-247216/5] 10 p0096 N76-21741

**TECHNOLOGY TRANSFER**

Rotors in reverse --- helicopter technology applied to windpowered generators 09 p0006 A76-13073

RANN utilization experience. Case study No. 15. New techniques for gasifying coal [PB-247259/5] 10 p0096 N76-21737

**TECHNOLOGY UTILIZATION**

A national and European program for the exploitation of solar energy 09 p0003 A76-11693

Nonconventional energy sources, resources, environment, prospects in the use of solar energy 09 p0003 A76-11696

Future prospects --- superconducting magnet and Josephson device development and applications 10 p0055 A76-23598

New potentialities for international co-operation in the field of solar energy and its applications 10 p0060 A76-26150

Superconducting magnets in the world of energy, especially in fusion power 10 p0063 A76-27699

Theoretical and practical aspects of energy storage and compression [UCRL-76091] 09 p0022 N76-11830

Technology utilization house study report --- for energy conservation [NASA-CR-144896] 09 p0028 N76-13595

Heat Pipe Technology: A bibliography with abstracts [NASA-CR-146780] 10 p0082 N76-20406

Heat Pipe Technology: A bibliography with abstracts [NASA-CR-145826] 10 p0082 N76-20407

Solar Thermal Energy Utilization: A bibliography with abstracts [NASA-CR-146804] 10 p0091 N76-21676

**TECTONICS**

Faulting in geothermal areas [PB-247071/4] 10 p0097 N76-21837

**TEFLOW (TRADEMARK)**

FEP-TEFLO encapsulated solar cell modules Further progress 09 p0011 A76-14744

**TELECOMMUNICATION**

Telecommunications substitutability for travel: An energy conservation potential [COM-75-10785/4] 09 p0022 N76-12267

Bibliography of selected abstracts of documents related to energy conservation through telecommunications [COM-75-11367/0] 10 p0071 N76-16632

**TEMPERATURE CONTROL**

Temperature control for solar heating and cooling of buildings [AAS PAPER 75-105] 09 p0003 A76-11281

Application of optimization techniques to solar heating and cooling [AAS PAPER 75-108] 09 p0003 A76-11338

Waste heat utilization through the use of heat pipes [ASME PAPER 75-WA/HT-48] 10 p0051 A76-21931

Thermic controls to regulate solar heat flux into buildings [PB-246364/4] 10 p0087 N76-20675

**TEMPERATURE EFFECTS**

Effect of constructional parameters on the temperature characteristics of silicon photoconverters 10 p0050 A76-21204

Process description 09 p0037 N76-15582

**TERMINAL FACILITIES**

Concept analysis, offshore breakwater-oil storage system [AD-A010348] 10 p0082 N76-20550

**TERRAIN ANALYSIS**

Solar thermal conversion power plant siting analysis 10 p0054 A76-22697

**TEST FACILITIES**

Central receiver solar thermal power system: Review and summary of available test facilities [PB-243751/5] 09 p0033 N76-14619

Development of high-density inertial-energy storage [PB-245998/0] 10 p0088 N76-20692

## TEXAS

An economic analysis of declining petroleum supplies in Texas: Income, employment, tax and production effects as measured by input-output and supply-demand simulation models [PB-243320/9] 09 p0027 N76-13574

Energy development and land use in Texas --- environmental impacts [PB-243328/2] 09 p0027 N76-13583

Importing fuels and petrochemical raw materials for Texas [PB-243322/5] 09 p0027 N76-13584

Fuel conservation measures. The transportation sector, volume 1 --- energy policy [PB-243324/1] 09 p0029 N76-13609

Fuel conservation measures. The transportation sector, volume 2 --- energy policy [PB-243325/8] 09 p0029 N76-13610

Texas energy scenarios [PB-243357/1] 09 p0029 N76-13617

Energy consumption conservation and projected needs for Texas agriculture [PB-243327/4] 09 p0029 N76-13618

Energy supply and demand in Texas for the period 1950 - 1973 [PB-243319/1] 09 p0029 N76-13621

Texas energy resources --- fuels, energy policy [PB-243318/3] 09 p0030 N76-13623

Executive summaries of project reports of the Council --- Energy supplies and consumption in Texas. [PB-243317/5] 09 p0030 N76-13624

Potential for wind generated power in Texas [PB-243349/8] 09 p0030 N76-13632

Potential of tidal and Gulf Stream power sources [PB-243350/6] 09 p0031 N76-13633

Impact on air quality of alternate strategies for the production, distribution and utilization of energy in Texas 1975-2000 [PB-243329/0] 09 p0031 N76-13653

Texas nuclear power policies. Volume 1: Introduction and background [PB-243352/2] 09 p0031 N76-13904

Relationship between supply/demand and pricing for alternate fuels in Texas: A study in elasticities [PB-243321/7] 09 p0031 N76-13977

Legal aspects of state-owned oil and gas energy resources [PB-243337/3] 09 p0031 N76-13979

Legal and regulatory policy aspects of energy allocation [PB-243336/5] 09 p0031 N76-13980

Existing energy law and regulatory practice in Texas [PB-243334/0] 09 p0033 N76-14615

Energy conservation --- fuel consumption, Texas, energy policy [PB-243335/7] 09 p0033 N76-14616

The impact of and potential for energy conservation practices in residential and commercial buildings in Texas --- energy policy [PB-243323/3] 09 p0033 N76-14617

Potential of solar energy for Texas [PB-243344/9] 09 p0034 N76-14621

Resources and utilization of Texas lignite [PB-243343/1] 09 p0034 N76-14622

The impact of state and federal law on development of geothermal resources in Texas [PB-243340/7] 09 p0034 N76-14632

Alternatives for the Texas electric power industry [PB-243345/6] 09 p0034 N76-14633

The implementation of a hydrogen energy system in Texas [PB-243346/4] 09 p0034 N76-14634

Potential for solid waste as an energy source in Texas [PB-243351/4] 09 p0035 N76-14635

An analysis of the potential use of geothermal energy for power generation along the Texas Gulf Coast [PB-243342/3] 09 p0035 N76-14636

Potential for solid waste as an energy source in Texas [PB-243351/4] 10 p0081 N76-19592

**THAILAND**

A survey of the possible use of windpower in Thailand and the Philippines [PB-245609/3] 10 p0080 N76-19582

**THEORIES**

Theoretical and practical aspects of energy storage and compression [UCRL-76091] 09 p0022 N76-11830

**THERMAL CONTROL COATINGS**

Miles of coatings for solar applications 10 p0055 A76-24044

Standardized performance tests of collectors of solar thermal energy: A selectively coated, steel collector with one transparent cover [NASA-TM-X-71870] 10 p0073 N76-17643

**THERMAL ENERGY**

A methodology for selecting optimal components for solar thermal energy systems - Application to power generation 09 p0002 A76-11189

Thermal nuclear powerstations --- uranium fueled-graphite moderated reactor parameters 09 p0006 A76-13139

Integration of photovoltaic and solar-thermal energy conversion systems 09 p0012 A76-14767

Thermal energy storage for solar heating and off-peak air conditioning 09 p0016 A76-17053

Photothermal conversion --- of solar energy 10 p0045 A76-19094

Solar thermal conversion power plant siting analysis 10 p0054 A76-22697

Considerations regarding the feasibility and technology of solar energy satellites and energy transfer satellites --- German book 10 p0055 A76-23722

Thermal energy from the sea --- Book 10 p0063 A76-27897

Suitability of Guam from an environmental aspect as a potential site for ocean thermal energy conversion plants [AD-A012500] 09 p0026 N76-12529

Central receiver solar thermal power system: Review and summary of available test facilities [PB-243751/5] 09 p0033 N76-14619

Standardized performance tests of collectors of solar thermal energy: Prototype moderately concentrating grooved collectors [NASA-TM-X-71863] 10 p0070 N76-16620

Design and optimization of the power cycle and the heat exchangers for an ocean thermal power system 10 p0079 N76-19550

Ocean thermal energy conversion research on an engineering evaluation and test program. Volume 3: Baseline system concept [PB-246180/4] 10 p0079 N76-19567

Ocean thermal energy conversion research on an engineering evaluation and test program. Volume 1: Executive summary [PB-246178/8] 10 p0085 N76-20653

Ocean thermal energy conversion research on an engineering evaluation and test program. Volume 2: Evaluation of prior work, subsystems and components [PB-246179/6] 10 p0085 N76-20654

Ocean thermal energy conversion research on an engineering evaluation and test program. Volume 5: Appendices [PB-246182/0] 10 p0085 N76-20655

Solar Thermal Energy Utilization: A bibliography with abstracts [NASA-CR-146804] 10 p0091 N76-21676

**THERMAL POLLUTION**

Space monitoring of the thermal impact of energy use 09 p0015 A76-15660

**THERMAL RESOURCES**

Thermal energy from the sea --- Book 10 p0063 A76-27897

Ocean thermal energy conversion: A model approach [AD-A015954] 10 p0078 N76-18691

**THERMAL SIMULATION**

Computer modeling of heat pumps and the simulation of solar-heat pump systems [ASME PAPER 75-WA/SOL-3] 10 p0052 A76-21971

**THERMIONIC CATHODES**

Sensitivity of the power density of a surface-ionization thermionic converter to increases of the cathode surface area by surface relief 10 p0054 A76-23057

**THERMIONIC CONVERTERS**

Advances in the development of flame-heated thermionic converters 09 p0006 A76-13413

Sensitivity of the power density of a surface-ionization thermionic converter to increases of the cathode surface area by surface relief 10 p0054 A76-23057

Unconventional energy converters --- German book 10 p0054 A76-23166

Terrestrial solar thermionic energy conversion systems concept [NASA-CR-145622] 09 p0020 N76-11558

Thermo electronic laser energy conversion 10 p0090 N76-21519

**THERMIONIC POWER GENERATION**

Terrestrial solar thermionic energy conversion systems concept [NASA-CR-145622] 09 p0020 N76-11558

Control for nuclear thermionic power source --- power supply circuits, energy policy [NASA-CASE-WPO-13114-2] 09 p0037 N76-15573

Soviet papers presented at the 1975 Lindhoven Meeting of Thermionic Conversion Specialists [JPRS-66621] 10 p0075 N76-18646

**THERMOCHEMICAL PROPERTIES**

Hydrogen problems in energy related technology --- metal degradation and embrittlement 10 p0047 A76-20072

**THERMOCHEMISTRY**

Hydrogen production from water by thermochemical cycles 10 p0067 A76-28398

Thermochemical cycles 10 p0076 N76-18664

**THERMOCLINES**

Technical and economic feasibility of the ocean thermal differences process [PB-244447/9] 09 p0042 N76-15653

**THERMODYNAMIC CYCLES**

Thrust in aircraft powerplants 09 p0002 A76-10842

The implications of high efficiency power cycles for electric power generation 09 p0007 A76-13907

The theoretical performance of the lithium bromide-water intermittent absorption refrigeration cycle 09 p0009 A76-14094

Thermodynamic analysis of a coal fired MHD power cycle with chemical heat regeneration 09 p0016 A76-17057

Application of chemically reacting working bodies in a solar gas-turbine system 10 p0050 A76-21209

**THERMODYNAMIC PROPERTIES**

Liquified natural gas, in France and throughout the world 10 p0062 A76-26846

**THERMODYNAMICS**

Conference on Thermodynamics and National Energy Problems [AD-A012702] 09 p0028 N76-13606

Conference on Thermodynamics and National Energy Problems [PB-243134/4] 09 p0041 N76-15638

**THERMOELECTRIC GENERATORS**

Some results of full-scale tests of solar thermoelectric generators /STEG/ and method for calculating their efficiency 09 p0002 A76-10766

Investigation of the mechanical characteristics of a dc motor with power supply from a solar thermoelectrogenerator with commensurable power 09 p0003 A76-11358

Unconventional energy converters --- German book 10 p0054 A76-23166

The thermo-mechanical generator 10 p0061 A76-26645

**THERMOELECTRIC POWER GENERATION**

Thermoelectric power system --- for spacecraft [NASA-CASE-MPS-22002-1] 10 p0070 N76-16612

**THERMOHYDRAULICS**

Method for the hydrodynamic and thermal calculation of circulating systems 10 p0067 A76-28508

- Some methods for constructing thermal and hydrodynamic fields in systems for heat extraction from the earth  
10 p0068 A76-28509

Material and manufacturing considerations for vertical-axis wind turbines  
09 p0014 A76-15163

## SUBJECT INDEX

Geometrical aspects of the troposphere as applied to the Darrieus vertical-axis wind turbine [ASME PAPER 75-DET-42] 10 p0048 A76-20716

Theoretical performance of vertical axis wind turbines [ASME PAPER 75-WA/ENER-1] 10 p0051 A76-21877

**TURBINE ENGINES**

Power turbines for Ocean Thermal Energy Conversions systems [ASME PAPER 75-WA/OCE-11] 10 p0051 A76-21960

Design and performance of a turbine suitable for an aerogenerator 10 p0057 A76-25398

**TURBINE WHEELS**

Economic viability of large wind generator rotors 09 p0006 A76-13675

Structural analysis of wind turbine rotors for. NSP-NASA Mod-0 wind power system 10 p0065 A76-28234

**TURBINES**

Wind-turbine mechanical to electrical conversion systems 10 p0066 A76-28245

Large experimental wind turbines: Where we are now [NASA-TM-X-71890] 10 p0091 A76-21683

**TURBOFAN ENGINES**

Economic benefits of engine technology to commercial airline operators [AIAA PAPER 75-1205] 09 p0001 A76-10257

An early glimpse at long-term subsonic commercial turbofan technology requirements --- fuel conservation [AIAA PAPER 75-1207] 09 p0001 A76-10259

**TURBOGENERATORS**

The implications of high efficiency power cycles for electric power generation 09 p0007 A76-13907

Design and performance of a turbine suitable for an aerogenerator 10 p0057 A76-25398

Electrical machines with superconductors. III - Turbogenerators 10 p0062 A76-27122

Thermal energy from the sea --- Book 10 p0063 A76-27897

**TURBOJET ENGINES**

Effect of fuel properties on performance of a single aircraft turbojet combustor --- from coal and oil-shale derived syncrudes 10 p0047 A76-20150

## U

**UNDERWATER STRUCTURES**

Sea cache: A mobile Petroleum, Oils, Lubricants (POL) seafloor storage and supply system for advanced bases [AD-A004936] 09 p0036 A76-15323

**UNITED STATES OF AMERICA**

ECASTAR: Energy conservation. An assessment of systems, technologies and requirements [NASA-CR-145716] 09 p0023 A76-12464

Depth and producing rate classification of petroleum reservoirs in the United States, 1971 [PB-244368/7] 09 p0032 A76-14593

Trends in refinery capacity and utilization, petroleum refineries in the United States-foreign refinery exporting centers [PB-244093/1] 09 p0039 A76-15613

Multiregional economic impacts of energy and transportation policies [PB-244586/4] 09 p0042 A76-15915

Energy and other non-renewable resources 10 p0078 A76-18971

Comparison of energy consumption between West Germany and the United States [PB-245652/3] 10 p0080 A76-19577

Energy: The states' response: Energy legislation January - July 1975, volume 1 [PB-246024/4] 10 p0084 A76-20649

Energy: The states' response: Energy legislation January - July, volume 2 [PB-246025/1] 10 p0085 A76-20650

Energy data requirements of the Federal Government: Part 3: Federal offshore oil and gas leasing policies [GPO-35-032] 10 p0089 A76-21033

Energy conservation and the transportation sector 10 p0092 A76-21692

## VOLT-AMPERE CHARACTERISTICS

National energy conservation 10 p0092 A76-21695

Report on a workshop for energy conservation in southeast industrial plants [PB-246651/4] 10 p0096 A76-21738

**UPPER ATMOSPHERE**

Some energy sources and sinks in the upper atmosphere 09 p0017 A76-18421

**URANIUM**

Fuel cycle issues in perspective --- for nuclear power plants 09 p0007 A76-13904

**URBAN DEVELOPMENT**

Energy basis for Miami, Florida, and other urban systems 09 p0023 A76-12462

**URBAN PLANNING**

Energy conservation through urban transportation planning [PB-245214/2] 10 p0073 A76-17655

**URBAN TRANSPORTATION**

Bringing logic to urban transportation innovation --- adaptation of automated guideway systems 10 p0050 A76-21141

Transportation energy conservation policies 10 p0058 A76-25613

R-32 energy storage propulsion system --- for rapid transit energy consumption reduction 10 p0063 A76-27800

Economic fueling of L.A. transportation in the post-fossil era 10 p0063 A76-27801

Feasibility of transportation projects: An energy-based methodology 09 p0026 A76-12891

Energy conservation through urban transportation planning [PB-245214/2] 10 p0073 A76-17655

**USER MANUALS (COMPUTER PROGRAMS)**

NECAP: NASA's Energy-Cost Analysis Program. Part 1: User's manual [NASA-CR-2590-PT-1] 09 p0020 A76-10751

NECAP: NASA's Energy-Cost Analysis Program. Part 2: Engineering manual [NASA-CR-2590-PT-2] 09 p0020 A76-10752

**USER REQUIREMENTS**

A solar energy power supply for terrestrial use 09 p0004 A76-11701

The computer simulation of automobile use patterns for defining battery requirements for electric cars [NASA-TM-X-71900] 10 p0093 A76-21700

**UTILITIES**

Electric utilities, Clean Air Act amendments, and sulfates [PB-243574/1] 09 p0031 A76-13657

Demand for coal for electricity generation 1975 - 1984 [PB-245216/7] 10 p0077 A76-18685

Electric power transmission and distribution systems: Costs and their allocation [PB-247141/5] 10 p0096 A76-21740

## V

**VACUUM DEPOSITION**

A new look at CdTe solar cells --- energy conversion efficiency computation 09 p0013 A76-14795

**VERTICAL TAKEOFF AIRCRAFT**

Benefits of VTOL aircraft in offshore petroleum logistics support [NASA-TM-X-73098] 10 p0074 A76-18087

**VIRGINIA**

Energy balance for the Washington metropolitan area for 1973 [PB-245391/8] 10 p0084 A76-20644

**VOLT-AMPERE CHARACTERISTICS**

The physical principles of the solar cell - An introduction 09 p0003 A76-11695

Some comments on the evaluation of electrical parameters of a solar cell 09 p0005 A76-12293

Effects of interfacial oxide layers on the performance of silicon Schottky-barrier solar cells 09 p0016 A76-17549

- A study of efficiency in low resistivity silicon solar cells  
10 p0045 A76-19022
- Preparation and properties of InP/CdS solar cells  
10 p0051 A76-21472

## W

## WALL FLOW

- The performance of electrodynamic expanders with slightly conducting walls  
10 p0057 A76-25396

## WASTE DISPOSAL

- Treatment of liquid wastes in the power industry  
09 p0007 A76-13902
- Design of fossil-fuel power plant by-product resource storage areas  
09 p0007 A76-13903
- Solar energy fixation and conversion with algal bacterial systems --- waste disposal by fermentation  
[PB-242362/2] 09 p0021 A76-11574
- Technical evaluation study: Energy-recovery solid waste incineration to Naval Station, Mayport, Florida  
[AD-A015615] 10 p0073 A76-17650
- Technical evaluation study: Solid waste heat reclamation at Naval Air Test Center Patuxent, Maryland  
[AD-A015613] 10 p0073 A76-17652
- Base line forecasts or resource recovery, 1972 to 1990  
[PB-245924/6] 10 p0079 A76-19545
- Potential for solid waste as an energy source in Texas  
[PB-243351/4] 10 p0081 A76-19592
- A technical, environmental and economic evaluation of the wet processing system for the recovery and disposal of municipal solid waste  
[PB-245674/7] 10 p0081 A76-19617
- Biological conversion of organic refuse to methane  
[PB-245795/0] 10 p0085 A76-20658
- Biological conversion of organic refuse to methane  
[PB-247751/1] 10 p0095 A76-21733

## WASTE ENERGY UTILIZATION

- Sandia's Solar Total Energy Program  
09 p0014 A76-15364
- Waste heat utilization through the use of heat pipes [ASME PAPER 75-WA/HT-48]  
10 p0051 A76-21931
- Energy recovery turbines --- waste energy utilization in industrial processes  
10 p0055 A76-24269
- Fuels from municipal refuse for utilities: Technology assessment  
[EPRI-261-1] 09 p0032 A76-14603
- National priorities and Federal research and development programs --- solid waste utilization  
[GPO-40-686] 09 p0035 A76-14972
- Energy industrial center study  
[PB-243823/2] 09 p0039 A76-15618
- Nuclear energy waste-space transportation and removal  
[NASA-TN-X-64973] 10 p0069 A76-16173
- The development and testing of a novel high temperature ceramic recuperator --- regenerators for waste energy utilization of industrial wastes  
[PB-245059/1] 10 p0069 A76-16240
- Pyrolysis system and process --- recovering energy from solid wastes containing hydrocarbons  
[NASA-CASE-MSC-12669-1] 10 p0071 A76-16621
- Technical evaluation study: Energy-recovery solid waste incineration to Naval Station, Mayport, Florida  
[AD-A015615] 10 p0073 A76-17650
- Technical evaluation study: Solid waste heat reclamation at Naval Air Test Center Patuxent, Maryland  
[AD-A015613] 10 p0073 A76-17652
- Potential for solid waste as an energy source in Texas  
[PB-243351/4] 10 p0081 A76-19592
- Biological conversion of organic refuse to methane  
[PB-247751/1] 10 p0095 A76-21733

## WASTE UTILIZATION

- Design of fossil-fuel power plant by-product resource storage areas  
09 p0007 A76-13903

- Potential for solid waste as an energy source in Texas  
[PB-243351/4] 09 p0035 A76-14635
- Characterizing combustible portions of urban refuse for potential use as fuel  
[PB-244780/3] 09 p0041 A76-15631
- Fuel gas production from solid waste  
[PB-245083/1] 10 p0069 A76-16243
- Preliminary assessment of systems for deriving liquid and gaseous fuels from waste or grown organics  
[NASA-TN-D-8165] 10 p0076 A76-18677
- Base line forecasts or resource recovery, 1972 to 1990  
[PB-245924/6] 10 p0079 A76-19545

## WASTES

- Petroleum refinery liquid wastes: Environmental, energy and economic impacts  
09 p0019 A76-10565

## WATER

- Ispra Mark-10 water splitting process  
09 p0037 A76-15580
- Solar photolysis of water  
[NASA-CASE-NPO-13675-1] 10 p0077 A76-18680

## WATER CIRCULATION

- Characteristics of a water absorber in front of a silicon solar cell  
10 p0062 A76-27132

## WATER CONSUMPTION

- Impact on Texas water quality and resources of alternate strategies for production distribution, and utilization of energy in Texas in the period 1974-2000  
[PB-243330/8] 09 p0031 A76-13656

## WATER QUALITY

- Impact on Texas water quality and resources of alternate strategies for production distribution, and utilization of energy in Texas in the period 1974-2000  
[PB-243330/8] 09 p0031 A76-13656

## WATER RESOURCES

- Wind-powered aqueduct systems --- Canadian River Project to furnish water for Texas panhandle cities  
10 p0065 A76-28240
- Impact on Texas water quality and resources of alternate strategies for production distribution, and utilization of energy in Texas in the period 1974-2000  
[PB-243330/8] 09 p0031 A76-13656

## WATER TEMPERATURE

- Solar-assisted gas-energy water-heating feasibility for apartments  
09 p0002 A76-11188
- Ocean thermal power plants  
09 p0009 A76-14161
- Heat exchanger penalties in double-loop solar water heating systems  
10 p0049 A76-20840
- The near-surface hydrothermal regime of Long Valley caldera  
10 p0053 A76-22112

## WATER TREATMENT

- Treatment of liquid wastes in the power industry  
09 p0007 A76-13902

## WAVE PROPAGATION

- Solar energy collection using beam waveguides  
10 p0062 A76-26703

## WELDED STRUCTURES

- Design of the IUE solar array  
09 p0011 A76-14737

## WIND (METEOROLOGY)

- Initial wind energy data assessment study  
[PB-244132/7] 09 p0042 A76-15739

## WIND VARIATIONS

- Performance and structural design aspects of a one-bladed electric-power-generating windmill  
09 p0010 A76-14620

## WINDMILLS (WINDPOWERED MACHINES)

- Advanced wind energy systems; Proceedings of the Workshop, Stockholm, Sweden, August 29, 30, 1974. Volumes 1 & 2  
10 p0064 A76-28226
- French contribution to wind power development - By EDF 1958-1966  
10 p0064 A76-28227
- Review of development in West-Germany --- windpowered generators  
10 p0064 A76-28229

## SUBJECT INDEX

## WINDPOWERED GENERATORS

- Aerodynamic design of horizontal axis wind generators 10 p0064 A76-28232
- Some marketing and technical considerations of wind power 10 p0065 A76-28233
- Structural analysis of wind turbine rotors for NSP-NASA Mod-0 wind power system 10 p0065 A76-28234
- Advanced vertical axis rotor concepts --- for windpowered generators 10 p0065 A76-28236
- A high speed vertical axis wind machine --- blade configurations 10 p0065 A76-28237
- Low velocity panemones --- vertical axis wind turbines 10 p0065 A76-28238
- Today's economy of the 200 kW experimental Gedser windmill --- in Denmark 10 p0066 A76-28246
- Installation and initial operation of a 4100 watt wind turbine [NASA-TN-X-71831] 09 p0032 A76-14605
- Fabrication and assembly of the ERDA/NASA 100 kilowatt experimental wind turbine [NASA-TN-X-3390] 10 p0093 A76-21703
- WINDPOWER UTILIZATION**
- Dynamic response of wind turbine rotor systems 09 p0010 A76-14618
- Nonlinear stress analysis of vertical-axis wind turbine blades [ASME PAPER 75-DET-35] 09 p0010 A76-14629
- Handbook of solar and wind energy 09 p0015 A76-15624
- Economic optimization models of windpower systems 09 p0016 A76-16843
- Wind power machines receiving fresh wind --- for generating electric power 10 p0048 A76-20524
- Wind energy utilization: A bibliography with abstracts - Cumulative volume 1944/1974 --- Book 10 p0053 A76-22496
- An impact analysis of a micro wind system --- windpower for recovering magnesium from stack dust 10 p0054 A76-23113
- Wind power --- Book 10 p0063 A76-27784
- Advanced wind energy systems; Proceedings of the Workshop, Stockholm, Sweden, August 29, 30, 1974. Volumes 1 & 2 10 p0064 A76-28226
- Low velocity panemones --- vertical axis wind turbines 10 p0065 A76-28238
- Some wind-energy storage options 10 p0066 A76-28242
- Today's economy of the 200 kW experimental Gedser windmill --- in Denmark 10 p0066 A76-28246
- Wind energy - Cost effectiveness is the key 10 p0066 A76-28247
- Wind energy research at the National Research Council of Canada 10 p0066 A76-28248
- Possibilities for wind energy utilization in the Netherlands 10 p0067 A76-28249
- The U.S.-NSP/NASA 10 p0067 A76-28250
- The Swedish wind energy R&D program proposal for three years 1975-77 10 p0067 A76-28251
- Wind energy utilization: A bibliography with abstracts, cumulative volume 1944/1974 [NASA-CR-145816] 09 p0027 A76-13589
- Development of an electrical generator and electrolysis cell for a wind energy conversion system [PB-243909/9] 09 p0040 A76-15626
- Wind/solar energy investigation, a feasibility study 10 p0070 A76-16617
- A survey of the possible use of windpower in Thailand and the Philippines [PB-245609/3] 10 p0080 A76-19582
- Large experimental wind turbines: Where we are now [NASA-TN-X-71890] 10 p0091 A76-21683
- WINDPOWERED GENERATORS**
- Concept selection, optimization, and preliminary design of large wind generators 09 p0001 A76-10147
- Northeast Utilities' participation in the Kaman/NASA wind power program 09 p0001 A76-10148
- Rotors in reverse --- helicopter technology applied to windpowered generators 09 p0006 A76-13073
- Electrostatic wind energy conversion --- using charge transfer via gas flow 09 p0006 A76-13141
- Economic viability of large wind generator rotors 09 p0006 A76-13675
- An assessment of solar and wind energy from the electric utility view point 09 p0007 A76-13906
- Design considerations for large wind mills 09 p0009 A76-14617
- How big is a windmill - Glauert revisited --- windpowered generator size-power relationship 09 p0010 A76-14619
- Performance and structural design aspects of a one-bladed electric-power-generating windmill 09 p0010 A76-14620
- Performance characteristics of aerodynamically optimum turbines for wind energy generators 09 p0010 A76-14621
- Concept selection and analysis of large wind generator systems 09 p0010 A76-14622
- Material and manufacturing considerations for vertical-axis wind turbines 09 p0014 A76-15163
- Optimal configuration of rotor blades for horizontal wind energy converters 09 p0017 A76-18374
- Technico-economic analysis of the utilization of inexhaustible energy sources --- solar and wind power plants 09 p0018 A76-18532
- Shrouds for aerogenerator [AIAA PAPER 76-181] 09 p0018 A76-18853
- Wind power machines receiving fresh wind --- for generating electric power 10 p0048 A76-20524
- Geometrical aspects of the troposkien as applied to the Darrieus vertical-axis wind turbine [ASME PAPER 75-DET-42] 10 p0048 A76-20716
- Analysis of polyphase commutator generator for wind-power applications 10 p0048 A76-20780
- Theoretical performance of vertical axis wind turbines [ASME PAPER 75-WA/ENER-1] 10 p0051 A76-21877
- The economic potential for wind energy conversion 10 p0054 A76-22698
- Design and performance of a turbine suitable for an aerogenerator 10 p0057 A76-25398
- Energy-storage requirements reduced in coupled wind-solar generating systems 10 p0060 A76-26151
- Wind power --- Book 10 p0063 A76-27784
- Design, economic and system considerations of large wind-driven generators 10 p0063 A76-27900
- Advanced wind energy systems; Proceedings of the Workshop, Stockholm, Sweden, August 29, 30, 1974. Volumes 1 & 2 10 p0064 A76-28226
- French contribution to wind power development - By EDP 1958-1966 10 p0064 A76-28227
- Review of the UK wind power programme 1948-1960 10 p0064 A76-28228
- Review of development in West-Germany --- windpowered generators 10 p0064 A76-28229
- Optimum design concept for windelectric converters 10 p0064 A76-28230
- The NCAH wind energy concept 10 p0064 A76-28231
- Aerodynamic design of horizontal axis wind generators 10 p0064 A76-28232

# PERSONAL AUTHOR INDEX

ENERGY / A Continuing Bibliography (Issue 10)

JULY 1976

## Typical Personal Author Index Listing

Listings in this index are arranged alphabetically by personal author. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document listed (e.g. NASA report, translation, NASA contractor report). The issue, page and accession numbers are located beneath and to the right of the title, e.g. 09 p0037 N76 15587. Under any one author's name the accession numbers are arranged in sequence with the IAA accession numbers appearing first.

## A

- ABDUAZIZOV, A.**  
Approximate solar-energy concentrator consisting of wedge-shaped facets of constant transverse curvature

# CORPORATE SOURCE INDEX

ENERGY / A Continuing Bibliography (Issue 10)

JULY 1976

## Typical Corporate Source Index Listing

The title of the document is used to provide a brief description of the subject matter. The issue, page number and NASA or AIAA accession number are included in each entry to assist the user in locating the abstract in the abstract section of an individual supplement of *Energy*. If applicable, a report number is also included as an aid in identifying the document.

## A

### ABCOR, INC., CAMBRIDGE, MASS.

Impact of energy shortage on ambient sulfur dioxide and particulate levels in metropolitan Boston AQCR  
[PB-246592/0] 10 p0089 N76-20741

### ABT ASSOCIATES, INC., CAMBRIDGE, MASS.

Cost-effective methods to reduce the heating and cooling energy requirements of existing single family residences  
[PB-241919/0] 09 p0019 N76-10573

### AEG-TELEFUNKEN, BACKNANG (WEST GERMANY).

Considerations on the feasibility and technology of solar energy satellites and energy transfer satellites  
[PB-242900/9] 09 p0020 N76-11204

### AEROSPACE CORP., EL SEGUNDO, CALIF.

Highlights of the solar thermal conversion program  
[PB-243129/4] 09 p0025 N76-12519  
Solar thermal conversion mission analysis.  
Volume 1: Summary report. Southwestern United States  
[PB-242898/5] 09 p0028 N76-13601

Solar thermal conversion mission analysis.  
Volume 2: Southwestern United States. Demand analysis  
[PB-242899/3] 09 p0028 N76-13602

Solar thermal conversion mission analysis.  
Volume 3: Southwestern United States. Insolation climatology  
[PB-242900/9] 09 p0028 N76-13603

Solar thermal conversion mission analysis.  
Southwestern United States. Volume 4: Comparative systems/economics analyses  
[PB-242901/7] 09 p0028 N76-13604

Solar thermal conversion mission analysis.  
Volume 5: Southwestern United States. Area definition and siting analysis. Southwestern United States  
[PB-242902/5] 09 p0028 N76-13605

Solar thermal conversion central receiver pilot plant siting  
[PB-243752/3] 09 p0033 N76-14618

Central receiver solar thermal power system: Review and summary of available test facilities  
[PB-243751/5] 09 p0033 N76-14619

### AIR FORCE SYSTEMS COMMAND, WRIGHT-PATTERSON AFB, OHIO.

New developments in the area of magnetohydrodynamic current generators  
[AD-A017803] 10 p0094 N76-21721

### AIR FORCE WEAPONS LAB., KIRTLAND AFB, N.MEX.

Alternative energy sources for United States Air Force installations  
[AD-A014858] 10 p0073 N76-17649

### AIRESEARCH MFG. CO., TORRANCE, CALIF.

Development of a solar-powered residential air conditioner  
[NASA-CR-144234] 10 p0083 N76-20632

### ALABAMA UNIV., HUNTSVILLE.

Solar heating and cooling: Technical data and systems analysis  
[NASA-CR-144110] 09 p0037 N76-15587

Solar heating and cooling: Technical data and systems analysis. Presentation charts (briefing to NASA 17 September, 1975)  
[NASA-CR-144111] 09 p0037 N76-15588

### AMARILLO COLL., TEX.

Potential for wind generated power in Texas  
[PB-243349/8] 09 p0030 N76-13632

### AMERICAN PHYSICAL SOCIETY, WASHINGTON, D.C.

Energy conservation and window systems. A report of the summer study on technical aspects of efficient energy utilization, July 1974 - April 1975  
[PB-243117/9] 09 p0030 N76-13627

Technical aspects of efficient energy utilization: 1974 summer study of the American Physical Society  
[PB-243116/1] 09 p0030 N76-13628

### AMERICAN UNIV., WASHINGTON, D.C.

Research on electrochemical energy conversion systems  
[AD-A014067] 09 p0035 N76-14639

### APPALACHIAN REGIONAL COMMISSION, WASHINGTON, D.C.

Energy supply/demand alternatives for the Appalachian region, executive summary  
[PB-242944/7] 09 p0021 N76-11572

### ARGONNE NATIONAL LAB., ILL.

Energy versus the environment: The issues  
[PB-246382/6] 10 p0087 N76-20681

### ARIZONA STATE UNIV., TEMPE.

Terrestrial photovoltaic power systems with sunlight concentration  
[PB-244590/6] 09 p0040 N76-15625

### ARIZONA UNIV., TUCSON.

Research applied to solar-thermal power conversion. Volume 1: Executive summary  
[PB-242086/7] 09 p0022 N76-11587

Research applied to solar-thermal power conversion. Volume 2: Final report  
[PB-242087/5] 09 p0022 N76-11588

A silicon junction solar energy converter  
[PB-242087/5] 09 p0032 N76-14599

A computerized information system on the impacts of coal fired energy development in the Southwest  
[PB-242087/5] 09 p0036 N76-15571

### ARMY CONSTRUCTION ENGINEERING RESEARCH LAB., CHAMPAIGN, ILL.

Technical evaluation study: Energy-recovery solid waste incineration to Naval Station, Mayport, Florida  
[AD-A015615] 10 p0073 N76-17650

Technical evaluation study: Solid waste heat reclamation at Naval Air Test Center Patuxent, Maryland  
[AD-A015613] 10 p0073 N76-17652

### ARMY FOREIGN SCIENCE AND TECHNOLOGY CENTER, CHARLOTTESVILLE, VA.

Research and development project for new energy technology (Sunshine Plan)  
[AD-A014534] 09 p0042 N76-15650

ARMY MOBILITY EQUIPMENT RESEARCH AND DEVELOPMENT  
CENTER, FORT BELVOIR, VA.

Status of ERDA-DOD applications plans  
09 p0024 N76-12479

AUBURN UNIV., ALA.  
ECASTAR: Energy conservation. An assessment of systems, technologies and requirements  
[NASA-CR-145716] 09 p0023 N76-12464  
Example of input-output analysis  
09 p0023 N76-12467  
Three strategies for conservation  
09 p0023 N76-12468  
Electrification: Mid-term (1985 - 2000)  
09 p0023 N76-12469  
Citizen's actions  
09 p0023 N76-12471  
Potential for conversion and utilization of solar energy in poultry production  
[PB-244375/2] 09 p0042 N76-15646  
ECASTAR: Energy Conservation; an Assessment of Systems, Technologies and Requirements  
[NASA-CR-146859] 10 p0091 N76-21686  
The political economy of conservation  
10 p0091 N76-21687  
Conservation: Toward firmer ground  
10 p0092 N76-21688  
Conservation in the energy industry  
10 p0092 N76-21690  
Energy conservation and the transportation sector  
10 p0092 N76-21692  
Energy conservation and the residential and commercial sector  
10 p0092 N76-21693  
Input-output analysis of some sector actions  
10 p0092 N76-21694  
National energy conservation  
10 p0092 N76-21695  
Electrification  
10 p0092 N76-21696  
Diversification of energy sources  
10 p0093 N76-21697  
ECASTAR summary and recommendations  
10 p0093 N76-21699

## B

BARRY (THEODORE) AND ASSOCIATES, LOS ANGELES, CALIF.  
Operations study of selected surface coal mining systems in the United States  
[PB-245085/6] 10 p0070 N76-16610

BATTELLE COLUMBUS LABS., OHIO.  
Development of information for standards of performance for the fossil fuel conversion industry  
[PB-242543/7] 09 p0025 N76-12514  
Industrial energy study of the glass industry  
[PB-242832/4] 09 p0026 N76-12531  
Evaluation of the theoretical potential for energy conservation in seven basic industries  
[PB-244772/0] 09 p0041 N76-15644  
Fuels technology: A state-of-the-art review  
[PB-242535/3] 09 p0042 N76-15654  
Study of the energy and fuel-use patterns in the nonferrous metals industries  
[PB-245194/6] 10 p0069 N76-16227  
Energy use patterns in metallurgical and nonmetallic mineral processing. Phase 4: Energy data and flowsheets, high-priority commodities  
[PB-245759/6] 10 p0080 N76-19576  
Energy use patterns in metallurgical and nonmetallic mineral processing. Phase 5: energy data end flowsheets, intermediate-priority commodities  
[PB-246357/8] 10 p0081 N76-20371

BECHTEL CORP., SAN FRANCISCO, CALIF.  
Fuels from municipal refuse for utilities: Technology assessment  
[EPRI-261-1] 09 p0032 N76-14603  
Electric power generation using geothermal brine resources for a proof-of-concept facility  
[PB-245264/7] 10 p0072 N76-16645

BOSTON UNIV., MASS.  
Photochemical conversion of solar energy  
[PB-246156/4] 10 p0086 N76-20667

BRITISH LIBRARY LENDING DIV., BOSTON SPA (ENGLAND).  
Situation and development of district heating in UNICHAL member countries  
[BLL-CE-TRANS-6668-(9022.09)] 09 p0032 N76-14594

Can flywheels replace pumped storage?  
[BLL-CE-TRANS-6761-(9022.09)] 09 p0032 N76-14596  
Systems of cybernetic simulation of power systems  
[BLL-CE-TRANS-6723-(9022.09)] 09 p0032 N76-14597

BRITISH STEEL CORP., SHEFFIELD (ENGLAND).  
The effect of raw materials for steelmaking on energy requirements  
[PB-245058/3] 10 p0069 N76-16226  
The development and testing of a novel high temperature ceramic recuperator  
[PB-245059/1] 10 p0069 N76-16240

BROBECK (WILLIAM H.) AND ASSOCIATES, BERKELEY, CALIF.  
Development of high-density inertial-energy storage  
[PB-245998/0] 10 p0088 N76-20692

BROOKHAVEN NATIONAL LAB., UPTON, N.Y.  
Brookhaven program to develop a helium-cooled power transmission system  
[BNL-20444] 10 p0093 N76-21705

BUREAU OF MINES, DALLAS, TEX.  
Depth and producing rate classification of petroleum reservoirs in the United States, 1971  
[PB-244368/7] 09 p0032 N76-14593  
Sulfur content of crude oils  
[PB-245192/0] 10 p0070 N76-16611

BUREAU OF MINES, DENVER, COLO.  
The reserve base of coal for underground mining in the western United States  
[PB-244909/8] 09 p0036 N76-15569

BUREAU OF MINES, PITTSBURGH, PA.  
Characterizing combustible portions of urban refuse for potential use as fuel  
[PB-244780/3] 09 p0041 N76-15631

BUREAU OF MINES, WASHINGTON, D.C.  
United States energy through the year 2000, revised  
10 p0083 N76-20635

## C

CALIFORNIA INST. OF TECH., PASADENA.  
SAGE: Solar Assisted Gas Energy  
[PB-246044/2] 10 p0088 N76-20691

CALIFORNIA STATE DIV. OF OIL AND GAS, SACRAMENTO.  
Proceedings of the Workshop on Environmental aspects of Geothermal Resources Development  
[PB-245209/2] 10 p0084 N76-20645

CALIFORNIA UNIV., BERKELEY.  
Solar energy fixation and conversion with algal bacterial systems  
[PB-242362/2] 09 p0021 N76-11574  
Evaluation of conventional power systems  
[NASA-CR-146344] 10 p0076 N76-18675

CALIFORNIA UNIV., LIVERMORE. LAWRENCE LIVERMORE LAB.  
Laser fusion: Capital cost of inertial confinement  
[UCRL-76546] 09 p0020 N76-11427  
Theoretical and practical aspects of energy storage and compression  
[UCRL-76091] 09 p0022 N76-11830  
Fusion power: The transition from fundamental science to fusion reactor engineering  
[UCRL-77055] 10 p0097 N76-22051

CALIFORNIA UNIV., LOS ANGELES.  
Studies pertaining to hydrogen car development. Part B: A comparative study of engine performance with gasoline and hydrogen. Part C: Hydrogen storage and flow system  
[PB-242131/1] 09 p0019 N76-10487

CALIFORNIA UNIV., SAN DIEGO.  
Identification of research and development priorities and of costing problems associated with implementation on in situ recovery of shale oil  
[PB-246278/6] 10 p0086 N76-20666

CARNegie-MELLON UNIV., PITTSBURGH, PA.  
Solar sea power  
[PB-242263/2] 09 p0021 N76-11579  
Major electric equipment cost figures for solar sea power plants  
[PB-242156/8] 09 p0022 N76-11583  
Solar sea power  
[PB-242264/0] 09 p0025 N76-12515

CHICAGO UNIV., ILL.  
Energy versus the environment: The issues  
[PB-246382/6] 10 p0087 N76-20681

## CITY UNIV. OF NEW YORK.

- RAMM utilization experience. Case study No. 15.  
New techniques for gasifying coal  
[PB-247259/5] 10 p0096 N76-21737
- COILE (FORREST) AND ASSOCIATES, NEWPORT NEWS, VA.  
Technology utilization house study report  
[NASA-CR-144896] 09 p0028 N76-13595
- COLORADO SPRINGS DEPT. OF PUBLIC UTILITIES, COLO.  
Assessment of a single family residence solar  
heating system in a suburban development  
setting. Solar heated residence technical  
research experiment  
[PB-242729/2] 09 p0025 N76-12520
- Assessment of a single family residence solar  
heating system in a suburban development setting  
[PB-242728/4] 09 p0025 N76-12521
- Assessment of a single family residence solar  
heating system in a suburban development setting  
[PB-243548/5] 09 p0029 N76-13611
- Assessment of a single family residence solar  
heating systems in a suburban development  
setting  
[PB-243549/3] 09 p0029 N76-13612
- Assessment of a single family residence solar  
heating system in a suburban development setting  
[PB-246141/6] 10 p0080 N76-19575
- COLORADO STATE UNIV., FORT COLLINS.  
Solar thermal electric power systems. Volume 1:  
Executive summary  
[PB-243835/6] 09 p0038 N76-15605
- Solar thermal electric power systems. Volume 2:  
Systems studies and economic evaluations  
[PB-243836/4] 09 p0039 N76-15606
- Solar thermal electric power systems. Volume 3:  
Appendices  
[PB-243837/2] 09 p0039 N76-15607
- COLORADO UNIV., BOULDER.  
Demand analysis solar heating and cooling of  
buildings, phase 1. Report. Solar water  
heating in South Florida, 1923 - 1974  
[PB-245322/3] 10 p0072 N76-16641
- Transport of mass and energy in porous media due  
to natural convection. The geothermal basin  
problem  
[PB-247087/0] 10 p0096 N76-21739
- Faulting in geothermal areas  
[PB-247071/4] 10 p0097 N76-21837
- COMMITTEE ON AERONAUTICAL AND SPACE SCIENCES (U. S.  
SENATE).  
Aircraft fuel efficiency program  
[GPO-60-208] 09 p0036 N76-15163
- Energy-related research and development  
[GPO-51-189] 10 p0083 N76-20630
- Solar power from satellites  
[GPO-66-608] 10 p0091 N76-21680
- COMMITTEE ON APPROPRIATIONS (U. S. SENATE).  
Special energy research and development  
appropriations for fiscal year 1975  
[GPO-32-023] 10 p0089 N76-21034
- COMMITTEE ON COMMERCE (U. S. SENATE).  
Natural Gas Production and Conservation Act of  
1974  
[GPO-47-272] 09 p0022 N76-12455
- Energy labeling and disclosure  
[GPO-51-440] 10 p0077 N76-18683
- Industry efforts in energy conservation  
[GPO-35-814] 10 p0083 N76-20636

# CONTRACT NUMBER INDEX

ENERGY / A Continuing Bibliography (Issue 10)

JULY 1976

## Typical Contract Number Index Listing

Listings in this index are arranged alphanumerically by contract number. Under each contract number the accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order with the IAA accession numbers appearing first. The accession number denotes the number by which the citation is identified in either the IAA or STAR section. Preceding the accession number are the issue and page number in the particular supplement in which the citation may be found.

# REPORT/ACCESSION INDEX

ENERGY / A Continuing Bibliography (Issue 10)

JULY 1976

## Typical Report/Accession Number Index Listing

Listings in this index are arranged alphanumerically by report number. The issue and page number indicate the actual Supplement and page where the citation may be located. The accession number denotes the number by which the citation is identified. An asterisk (\*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche. A plus sign (+) indicates a document that cannot be microfilmed but for which one to one facsimile is available.

# **PUBLIC COLLECTIONS OF NASA DOCUMENTS**

## **DOMESTIC**

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

### **CALIFORNIA**

University of California, Berkeley

### **COLORADO**

University of Colorado Boulder

### **DISTRICT OF COLUMBIA**

Library of Congress

### **GEORGIA**

Georgia Institute of Technology, Atlanta

### **ILLINOIS**

The John Crerar Library, Chicago

### **MASSACHUSETTS**

Massachusetts Institute of Technology, Cambridge

### **MISSOURI**

Linda Hall Library, Kansas City

### **NEW YORK**

Columbia University, New York

### **OKLAHOMA**

University of Oklahoma, Bizzell Library

### **PENNSYLVANIA**

Carnegie Library of Pittsburgh

### **WASHINGTON**

University of Washington, Seattle

NASA publications (those indicated by an "\*" following the accession number) are also received by the following public and free libraries:

### **CALIFORNIA**

Los Angeles Public Library

San Diego Public Library

### **COLORADO**

Denver Public Library

### **CONNECTICUT**

Hartford Public Library

### **MARYLAND**

Enoch Pratt Free Library, Baltimore

### **MASSACHUSETTS**

Boston Public Library

### **MICHIGAN**

Detroit Public Library

### **MINNESOTA**

Minneapolis Public Library

### **MISSOURI**

Kansas City Public Library

St. Louis Public Library

### **NEW JERSEY**

Trenton Public Library

### **NEW YORK**

Brooklyn Public Library

Buffalo and Erie County Public Library

Rochester Public Library

New York Public Library

### **OHIO**

Akron Public Library

Cincinnati Public Library

Cleveland Public Library

Dayton Public Library

Toledo Public Library

### **TENNESSEE**

Memphis Public Library

### **TEXAS**

Dallas Public Library

Fort Worth Public Library

### **WASHINGTON**

Seattle Public Library

### **WISCONSIN**

Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 750 Third Avenue, New York, New York 10017.

## **EUROPEAN**

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents those identified by both the symbols # and \* from ESA - Space Documentation Service, European Space Agency, 114 Avenue Charles-de-Gaulle, 92522 Neuilly-sur-Seine, France.
